**Cumberland Advances Feasibility and Reports Final 2003 Drill Results**

**at Meadowbank Gold Project**

**CUMBERLAND RESOURCES LTD. (CBD-TSX)** is pleased to announce that final feasibility studies on the Meadowbank project are advancing towards completion in the first quarter of 2004 and are expected to benefit from a successful 2003 drill program and improved gold prices. As a result of improved gold resources (see news release NR03-11), base case studies for projected mill throughput at Meadowbank have increased to 5,500 tonnes per day (tpd) from the 4,700 tpd estimate used in the preliminary assessment\* completed in January 2002. The Company's 100% owned Meadowbank gold project, is located 70 kilometres north of the Hamlet of Baker Lake, Nunavut.

The Company is also pleased to announce the final drill results from Phase 2 infill drilling initiatives, which continued to focus on definition of near surface resources within preliminary open pit designs. Results from closely spaced infill drilling in the near surface portion of the Third Portage deposit are highlighted below and a full table is attached.

**3.31 g/t gold over 18.66 m at 13 m below surface in hole TP03-467**

**6.97 g/t over 10.72 m at 5 m below surface in hole TP03-468**

**15.24 g/t over 6.32 m at 5 m below surface and**

**5.03 g/t over 4.15 m at 15 m below surface in hole TP03-471**

**10.02 g/t over 3.86 m at 4 m below surface and**

**4.71 g/t over 15.86 m at 20 m below surface and**

**3.80 g/t over 10.27 m at 34 m below surface in hole TP03-472**

**7.66 g/t over 17.72 m at 10 m below surface in hole TP03-473**

**9.29 g/t over 18.82 m at 60 m below surface in hole TP03-475**

**5.70 g/t over 11.67 m at 5 m below surface in hole TP03-478**

**3.82 g/t over 21.40 m at 20 m below surface in hole TP03-479**

**4.34 g/t over 15.91 m at 49 m below surface in hole TP03-488**

**5.14 g/t over 14.47 m at 14 m below surface in hole TP03-489**

**7.00 g/t over 4.05 m at 13 m below surface and**

**8.78 g/t over 4.95 m at 75 m below surface and**

**16.56 g/t over 3.77 m at 82 m below surface in hole TP03-490**

**8.47 g/t over 7.62 m at 4 m below surface in hole TP03-491**

**13.75 g/t over 2.00 m at 30 m below surface in hole NP03-481**

Drill results are in line with expectations in this sector of the deposit, and are expected to improve resource classification in the starter open pit design for the Portage pit. Revisions to project resources, incorporating 2003 drilling results, are currently being finalized for feasibility level open pit designs and reserve classification.

---

**News Release 03-26**

**Page Two**

Meadowbank is host to the third largest undeveloped gold resource in Canada with six closely spaced, near surface, gold deposits totaling:

**Meadowbank Resources\*\* Q2/2003**

<b>Category</b>	<b>Tonnes</b>	<b>Grade (g/t)</b>	<b>Ounces Gold</b>
Measured and Indicated	15,471,000	4.66	2,318,000
Inferred	8,921,000	4.20	1,205,000

Cumberland is a mineral exploration and development company which holds interests in two of the largest undeveloped gold properties in Canada: Meadowbank (100%) and Meliadine West (22% carried to production).

Cumberland is well financed and is advancing the Meadowbank property to production. The Company is currently evaluating a 10 year open pit mine plan based on a preliminary assessment\* completed in January 2002, which indicated the Meadowbank property could support a production rate of approximately 250,000 ounces per year at an estimated cash cost of US\$168 per ounce.

## **CUMBERLAND RESOURCES LTD.**

Kerry M. Curtis, B.Sc., Geo.  
President and CEO

For further information contact: Kerry Curtis, President and CEO or Joyce Musial, Manager, Investor Relations

Roger B. March, P.Geo., is the Senior Project Geologist and designated Q.P. for the Meadowbank Project. Mr. March has supervised drill hole planning, implementation and quality control/quality assurance programs at the Meadowbank Project since 1996. Drill core analysis is performed on split core with standard fire assay procedures and AA finish. QA/QC programs employ random insertion of four internal standards, field duplicates and blank samples. Gravimetric analysis is performed on any sample yielding greater than 1 g/t gold in fire assay. Primary assaying is performed by IPL Laboratories, of Vancouver. ACME Analytical Laboratories of Vancouver provides external reference assaying.

\*Cautionary Note: The preliminary assessment completed in January 2002 is preliminary in nature, included inferred mineral resources that are considered too speculative geologically to have the economic considerations applied to them that would enable them to be categorized as mineral reserves and there is no certainty that the preliminary assessment will be realized. The production forecast used in the Preliminary Assessment included approximately 5.9 million tonnes of Inferred Mineral Resource, or 41% of the total forecast. In compliance with National Instrument 43-101, the Company issued a Technical Report which is available at [www.sedar.com](http://www.sedar.com) for review.

\*\*Second quarter 2003 resource estimates are in accordance with National Instrument 43-101. Resource classification conforms to CIM Standards on Mineral Resources and Reserves (August 2000).

\*\*\*True thickness of intersections ranges from 80-100% of intersected widths.
