

accounts payable and higher accruals and other liabilities.

We had several uncommitted, unsecured bank lines of credit aggregating \$62.1 million as of December 31, 2017. There are no financial covenants under these lines of credit with which we must comply. As of December 31, 2017, we had outstanding bank guarantees of \$44.2 million under these lines of credit.

Table of Contents

The following table summarizes our Condensed Consolidated Statements of Cash Flows (in thousands):

	Nine Months Ended December 31,	
	2017	2016
Net cash provided by operating activities	\$256,084	\$240,647
Net cash used in investing activities	(116,192)	(90,240)
Net cash used in financing activities	(124,214)	(149,556)
Effect of exchange rate changes on cash and cash equivalents	1,677	(6,468)
Net increase (decrease) in cash and cash equivalents	\$17,355	\$(5,617)

The following table presents selected financial information and statistics as of December 31, 2017 and 2016 (Dollars in thousands):

	Three Months Ended December 31,	
	2017	2016
Accounts receivable, net	\$351,753	\$277,677
Accounts payable	\$429,119	\$358,196
Inventories	\$278,979	\$250,286
Days sales in accounts receivable (“DSO”) (Days) (1)	39	37
Days accounts payable outstanding (“DPO”) (Days) (2)	72	77
Inventory turnover (“ITO”) (x)(3)	7.7	6.7

(1) DSO is determined using ending accounts receivable, net as of the most recent quarter-end and net sales for the most recent quarter.

(2) DPO is determined using ending accounts payable as of the most recent quarter-end and cost of goods sold for the most recent quarter.

(3) ITO is determined using ending inventories and annualized cost of goods sold (based on the most recent quarterly cost of goods sold).

DSO for the three months ended December 31, 2017 increased two days, compared to December 31, 2016, primarily due to the introduction of breakage model for EMEA marketing and incentive programs during the fourth quarter of fiscal year 2017.

DPO for the three months ended December 31, 2017 decreased five days, compared to December 31, 2016, primarily due to the timing of purchases.

ITO for the three months ended December 31, 2017 was higher, compared to the same period of the prior fiscal year. The increase in inventories compared with December 31, 2016 was primarily driven by higher net sales.

If we are not successful in launching and phasing in our new products, or market competition increases during the current fiscal year, or we are not able to sell the new products at the prices planned, it could have a material impact on our net sales, gross profit margin, operating results including operating cash flow, and inventory turnover in the future.

During the nine months ended December 31, 2017, we generated \$256.1 million cash in operating activities. Our main sources of operating cash flows were from net income after adding back non-cash expenses of depreciation, amortization, and share-based compensation expense, and from the increases in accounts payable and accrued and other liabilities, offset by the increase in accounts receivable, net. The increase in accounts receivable, net was primarily due to higher sales and timing of customer payments, and the increase in accounts payable and accrued and

other liabilities was primarily driven by the timing of payments.

Net cash used in investing activities was \$116.2 million, primarily due to \$85.0 million of purchase price for the acquisition of the ASTRO business (refer to "Note 2- Business Acquisition" to the condensed consolidated financial statements) and \$27.6 million of purchases of property, plant and equipment.

Table of Contents

Our expenditures for property, plant and equipment during the nine months ended December 31, 2017 increased by \$4.2 million, compared to the same period of the prior fiscal year, mainly due to the higher amount of tooling purchases.

Net cash used in financing activities was \$124.2 million, primarily for the \$104.2 million cash dividends paid, \$20.4 million repurchases of our registered shares, \$25.5 million tax withholdings related to net share settlements of restricted stock units, and \$5.0 million payment of contingent consideration in connection with the Jaybird acquisition, partially offset by \$30.9 million in proceeds received from the exercises of stock options.

During the nine months ended December 31, 2017, there was a \$1.7 million gain of currency translation exchange rate effect on cash and cash equivalents, compared to a loss of \$6.5 million during the same period of the prior fiscal year. The gain from currency translation exchange effect during the nine months ended December 31, 2017 was primarily due to the strengthening of the Euro against the U.S. Dollar by 12% during the period. The loss from currency translation exchange effect during the nine months ended December 31, 2016 was primarily due to the weakening of the Euro against the U.S. Dollar by 8% during the period, which had an adverse impact on our cash and cash equivalents balances in subsidiaries with Euro as their functional currency.

Cash Outlook

Our principal sources of liquidity are our cash and cash equivalents, cash flow generated from operations and, to a much lesser extent, capital markets and borrowings. Our future working capital requirements and capital expenditures may increase to support investment in product innovations and growth opportunities, or to acquire or invest in complementary businesses, products, services, and technologies.

During the nine months ended December 31, 2017, we declared and paid cash dividends of approximately CHF 0.61 (USD equivalent of \$0.63) per common share, totaling \$104.2 million on our outstanding common stock. During the nine months ended December 31, 2016, we declared and paid cash dividends of approximately CHF 0.56 (USD equivalent of \$0.57) per common share, totaling \$93.1 million on our outstanding common stock. Any future dividends will be subject to the approval of our shareholders.

In March 2017, our Board of Directors approved another share buyback program, which authorizes us to purchase up to \$250.0 million of our own shares, following the expiration date of our 2014 buyback program. The new program was approved by the Swiss Takeover Board in May 2017. Although we enter into trading plans for systematic repurchases (e.g., 10b5-1 trading plans) from time to time, our share buyback program provides us with the opportunity to make opportunistic repurchases during periods of favorable market conditions and is expected to remain in effect for a period of three years. Shares may be repurchased from time to time on the open market, through block trades or otherwise. Opportunistic purchases may be started or stopped at any time without prior notice depending on market conditions and other factors. As of December 31, 2017, \$230.2 million is still available for repurchase under the 2017 buyback program.

As noted in "Note 7 - Fair Value Measurements" to our condensed consolidated financial statements, we acquired all of the equity interest of Jaybird with an additional earn-out of up to \$45.0 million in cash based on the achievement of certain net revenue growth targets over two years starting July 2016. If the net revenue growth targets were met, the Company would have paid a maximum of \$25.0 million and \$20.0 million in fiscal years 2018 and 2019, respectively. In October 2017, we entered into an agreement with the sellers of Jaybird which fully, irrevocably and unconditionally releases us from the earn-out rights and payments in the Jaybird purchase agreement in exchange for \$5.0 million in cash. In November 2017, we made the payment of \$5.0 million to the sellers of Jaybird.

We have changed the payment frequency of our employee performance bonus plan from semi-annual payment to annual payment. The full year bonus is expected to be made in the first quarter of the following fiscal year, and the operating cash flow for that period will be negatively affected as a result.

If we do not generate sufficient operating cash flows to support our operations and future planned cash requirements, our operations could be harmed and our access to credit could be restricted or eliminated. However, we believe that the trend of our historical cash flow generation, our projections of future operations and our available cash balances will provide sufficient liquidity to fund our operations for at least the next 12 months.

Table of Contents

Operating Leases Obligation

We lease facilities under operating leases, certain of which require us to pay property taxes, insurance and maintenance costs. Operating leases for facilities are generally renewable at our option and usually include escalation clauses linked to inflation. The remaining terms of our non-cancelable operating leases expire in various years through 2030.

Purchase Commitments

As of December 31, 2017, we had non-cancelable purchase commitments for inventory purchases made in the normal course of business to original design manufacturers, contract manufacturers and other suppliers, the majority of which are expected to be fulfilled within the next 12 months. Non-cancelable purchase commitments for capital expenditures primarily relate to commitments for tooling for new and existing products, computer hardware, leasehold and improvements. We expect to continue making capital expenditures in the future to support product development activities and ongoing and expanded operations. Although open purchase commitments are considered enforceable and legally binding, the terms generally allow us to reschedule or adjust our requirements based on business needs prior to delivery of goods or performance of services.

Other Contractual Obligations and Commitments

For further detail about our contractual obligations and commitments, refer to our Annual Report on Form 10-K for the fiscal year ended March 31, 2017.

Off-Balance Sheet Arrangements

We do not have any off-balance sheet arrangements that have, or are reasonably likely to have, a current or future effect on our financial condition, changes in financial condition, revenues or expenses, results of operations, liquidity, capital expenditures or capital resources that are material to investors.

Guarantees

Logitech Europe S.A., one of our wholly-owned subsidiaries, guaranteed payments of two third-party contract manufacturers' purchase obligations. As of December 31, 2017, the maximum amount of this guarantee was \$3.8 million, of which \$1.7 million of guaranteed purchase obligations were outstanding.

Indemnifications

We indemnify certain suppliers and customers for losses arising from matters such as intellectual property disputes and product safety defects, subject to certain restrictions. The scope of these indemnities varies, but in some instances includes indemnification for damages and expenses, including reasonable attorneys' fees. As of December 31, 2017, no amounts have been accrued for indemnification provisions. We do not believe, based on historical experience and information currently available, that it is probable that any material amounts will be required to be paid under our indemnification arrangements.

We also indemnify our current and former directors and certain current and former officers. Certain costs incurred for providing such indemnification may be recoverable under various insurance policies. We are unable to reasonably estimate the maximum amount that could be payable under these arrangements because these exposures are not capped, the obligations are conditional in nature, and the facts and circumstances involved in any situation that might arise are variable.

The stock purchase agreement that we entered into in connection with the investment by three venture capital firms in Lifesize contains representations, warranties and covenants of Logitech and Lifesize to the Investors. Subject to certain limitations, we have agreed to indemnify the Investors and certain persons related to the Investors for certain losses resulting from breaches of or inaccuracies in such representations, warranties and covenants as well as certain other obligations, including third-party expenses, restructuring costs and pre-closing tax obligations of Lifesize.

Table of Contents

Legal Proceedings

From time to time we are involved in claims and legal proceedings that arise in the ordinary course of our business. We are currently subject to several such claims and a small number of legal proceedings. We believe that these matters lack merit and we intend to vigorously defend against them. Based on currently available information, we do not believe that resolution of pending matters will have a material adverse effect on our financial condition, cash flows or results of operations. However, litigation is subject to inherent uncertainties, and there can be no assurances that our defenses will be successful or that any such lawsuit or claim would not have a material adverse impact on our business, financial condition, cash flows and results of operations in a particular period. Any claims or proceedings against us, whether meritorious or not, can have an adverse impact because of defense costs, diversion of management and operational resources, negative publicity and other factors. Any failure to obtain necessary license or other rights, or litigation arising out of intellectual property claims, could adversely affect our business.

Table of Contents

ITEM 3. QUANTITATIVE AND QUALITATIVE DISCLOSURES ABOUT MARKET RISK

Market Risk

Market risk represents the potential for loss due to adverse changes in the fair value of financial instruments. As a global concern, we face exposure to adverse movements in currency exchange rates and interest rates. These exposures may change over time as business practices evolve and could have a material adverse impact on our financial results.

Currency Exchange Rates

We report our results in U.S. Dollars. Changes in currency exchange rates compared to the U.S. Dollar can have a material impact on our results when the financial statements of our non-U.S. subsidiaries are translated into U.S. Dollars. The functional currency of our operations is primarily the U.S. Dollar. Certain operations use the Swiss Franc or the local currency of the country as their functional currencies. Accordingly, unrealized currency gains or losses resulting from the translation of net assets or liabilities denominated in other currencies to the U.S. Dollar are accumulated in the cumulative translation adjustment component of other comprehensive income (loss) in shareholders' equity.

We are exposed to currency exchange rate risk as we transact business in multiple currencies, including exposure related to anticipated sales, anticipated purchases and assets and liabilities denominated in currencies other than the U.S. Dollar. We transact business in over 30 currencies worldwide, of which the most significant to operations are the Euro, Chinese Renminbi, Australian Dollar, Taiwanese Dollar, British Pound, Canadian Dollar, Japanese Yen and Mexican Peso. For the three months ended December 31, 2017, approximately 47% of our sales were in non-U.S. denominated currencies, with 25% of our sales denominated in Euro. The mix of our operating expenses by currency is significantly different from the mix of our sales, with a larger portion denominated in U.S. Dollar and less denominated in Euro and other currencies. A strengthening U.S. Dollar has more unfavorable impact on our sales compare to the favorable impact on our operating expense, resulting in an adverse impact on our operating results.

Table of Contents

If the U.S. Dollar remains at its current strong levels in comparison to other currencies, this will affect our results of operations in future periods as well. The table below provides information about our underlying transactions that are sensitive to currency exchange rate changes, primarily assets and liabilities denominated in currencies other than the base currency, where the net exposure is greater than \$0.5 million as of December 31, 2017. The table also presents the U.S. Dollar impact on earnings of a 10% appreciation and a 10% depreciation of the base currency as compared with the transaction currency (in thousands):

Base Currency	Transaction Currency	Net Exposed Long (Short) Currency Position	FX Gain (Loss) From 10% Appreciation of Base Currency	FX Gain (Loss) From 10% Depreciation of Base Currency
U.S. Dollar	Chinese Renminbi	\$(44,492)	\$ 4,045	\$ (4,944)
U.S. Dollar	Canadian Dollar	20,802	(1,891)	2,311
U.S. Dollar	Australian Dollar	17,791	(1,617)	1,977
U.S. Dollar	Brazilian Real	14,538	(1,322)	1,615
U.S. Dollar	Singapore Dollar	(11,982)	1,089	(1,331)
U.S. Dollar	Mexican Peso	10,813	(983)	1,201
U.S. Dollar	Taiwanese Dollar	(9,516)	865	(1,057)
U.S. Dollar	Japanese Yen	3,749	(341)	417
U.S. Dollar	Swiss Franc	1,453	(132)	161
U.S. Dollar	Korean Wan	(1,129)	103	(125)
U.S. Dollar	Indian Rupee	(933)	85	(104)
U.S. Dollar	Hong Kong Dollar	(920)	84	(102)
U.S. Dollar	Russian Ruble	646	(59)	72
Euro	British Pound	(3,959)	360	(440)
Euro	Swedish Krona	(3,163)	288	(351)
Euro	Turkish Lira	3,115	(283)	346
Euro	U.S. Dollar	1,424	(129)	158
Euro	Croatian Kuna	1,305	(119)	145
Euro	Swiss Franc	(979)	89	(109)
Euro	Polish Zloty	(953)	87	(106)
Euro	Arab Emirates Dirham	(563)	51	(63)
		\$(2,953)	\$ 270	\$ (329)

Long currency positions represent net assets being held in the transaction currency while short currency positions represent net liabilities being held in the transaction currency.

Our principal manufacturing operations are located in China, with much of our component and raw material costs transacted in Chinese Renminbi ("CNY"). As of December 31, 2017, net liabilities held in CNY totaled \$44.5 million.

Derivatives

We enter into cash flow hedge contracts to protect against exchange rate exposure of forecasted inventory purchases. These hedging contracts mature within four months. Gains and losses in the fair value of the effective portion of the hedges are deferred as a component of accumulated other comprehensive loss until the hedged inventory purchases are sold, at which time the gains or losses are reclassified to cost of goods sold. Cash flows from such hedges are classified as operating activities in the condensed consolidated statements of cash flows. As of December 31, 2017 and March 31, 2017, the notional amounts of currency exchange forward contracts outstanding related to forecasted

inventory purchases were \$135.0 million and \$59.4 million, respectively. Deferred realized gains of \$0.1 million were recorded in accumulated other comprehensive loss as of December 31, 2017, and are expected to be reclassified to cost of goods sold when the related inventory is sold. Deferred unrealized losses of \$1.3 million related to open cash flow hedges were recorded in accumulated other comprehensive loss as of December 31, 2017, and these forward contracts will be revalued in future periods until the related inventory is sold, at which time the resulting gains or losses will be reclassified to cost of goods sold.

Table of Contents

We also enter into foreign currency exchange forward and swap contracts to reduce the short-term effects of currency exchange rate fluctuations on certain currency receivables or payables denominated in currencies other than the functional currencies of our subsidiaries. These contracts generally mature within one month. The primary risk managed by using forward and swap contracts is the currency exchange rate risk. The gains or losses on these currency exchange contracts are recognized in earnings based on the changes in fair value. Cash flows from these contracts are classified as operating activities in the condensed consolidated statements of cash flows. The notional amounts of currency exchange contracts outstanding as of December 31, 2017 and March 31, 2017 relating to foreign currency receivables or payables were \$89.0 million and \$56.7 million, respectively. Open forward and swap contracts as of December 31, 2017 and March 31, 2017 consisted of contracts in Mexican Pesos, Japanese Yen, British Pounds, Taiwanese Dollars, Canadian Dollars, Australian Dollars and Chinese Renminbi to be settled at future dates at pre-determined exchange rates.

Table of Contents

ITEM 4. CONTROLS AND PROCEDURES

Disclosure Controls and Procedures

The Company conducted an evaluation of the effectiveness of the design and operation of its disclosure controls and procedures (as defined in Rules 13a-15(e) and 15d-15(e) under the Securities Exchange Act of 1934, as amended (the “Exchange Act”)) (“Disclosure Controls”) as of the end of the period covered by this Quarterly Report on Form 10-Q (this “Report”) required by Exchange Act Rules 13a-15(b) or 15d-15(b). The controls evaluation was conducted under the supervision and with the participation of the Company’s management, including the Company’s Chief Executive Officer (“CEO”) and Chief Financial Officer (“CFO”). Disclosure controls and procedures are designed to reasonably assure that information required to be disclosed in our reports filed or submitted under the Exchange Act, such as this Quarterly Report on Form 10-Q, is recorded, processed, summarized and reported within the time periods specified in the Securities and Exchange Commission’s rules and forms. Disclosure controls and procedures are also designed to reasonably assure that this information is accumulated and communicated to our management, including the CEO and CFO, to allow timely decisions regarding required disclosure. Based on this evaluation, the CEO and CFO have concluded that, as of the end of the period covered by this Report, the Company’s Disclosure Controls and procedures were not effective as a result of the material weakness that existed in our internal control over financial reporting as described below.

Notwithstanding the material weakness discussed below, management, including our CEO and CFO, believes the condensed consolidated financial statements included in this Quarterly Report on Form 10-Q fairly represent, in all material respects, our financial condition, results of operations and cash flows for the periods presented in accordance with U.S. generally accepted accounting principles.

Material Weakness in Internal Controls over Financial Reporting

A material weakness is a deficiency, or combination of deficiencies, in internal control over financial reporting, such that there is a reasonable possibility that a material misstatement of the annual or interim financial statements will not be prevented or detected on a timely basis. Management identified the following material weakness as of March 31, 2017 that continued to exist as of December 31, 2017:

In connection with the Company’s sales growth strategy in EMEA, the Company expanded its use of performance-based customer programs in the region in fiscal years 2016 and 2017. As a result, the allowances and accruals for customer incentive, cooperative marketing and pricing programs increased in those years. In prior periods, the Company did not have sufficient historical data on customer breakage patterns in the EMEA region to allow for a reliable estimation of future customer breakage attributable to these allowances and accruals. However, by the fourth quarter of fiscal year 2017, sufficient historical data was available to establish a model to reliably estimate the expected future customer breakage. As of March 31, 2017, the Company did not identify that sufficient historical data existed to estimate future customer breakage and, as a result, the Company did not modify the design of the control activities related to the accuracy of the allowance and accruals to respond to the change in relevant data. Our management has concluded that this deficiency constitutes a material weakness in our internal control over financial reporting.

Management concluded that the allowances and accrued liabilities relating to customer programs in the EMEA region were overstated at March 31, 2017 as future breakage was not estimated. This overstatement of allowances and accrued liabilities relating to customer programs in the EMEA region has been corrected in our consolidated financial statements included in our Annual Report on Form 10-K. While the control deficiency did not result in a misstatement of our current or previously issued consolidated financial statements, the material weakness resulted in changes to our preliminary results of operations for the quarter and year ended March 31, 2017 furnished to the United States

Securities and Exchange Commission (“SEC”) in the Current Report on Form 8-K on April 26, 2017.

Management’s Plan to Remediate the Material Weakness

In May 2017, management began implementing a remediation plan to address the material weakness. The remediation plan includes:

- The development and implementation of a new estimation model of breakage related to customer incentive, cooperative marketing and pricing programs in the EMEA region;
- The design and implementation of related controls over the new estimation model; and

Table of Contents

Enhancements to the process to periodically evaluate and appropriately respond to changing business circumstances that may impact control activities, specifically in the area of the accuracy of the allowances and accruals.

Our management believes the foregoing efforts will effectively remediate the material weakness; however, the material weakness cannot be considered remediated until the control has operated for a sufficient period of time and until management has concluded, through testing of several instances, that the control is operating effectively. The Company expects to remediate this material weakness by the end of fiscal year 2018.

Limitations on the Effectiveness of Controls

The Company's management, including the CEO and CFO, does not expect that the Company's disclosure controls and procedures or internal control over financial reporting will prevent all errors and all fraud. Internal control over financial reporting, no matter how well designed and operated, can provide only reasonable, not absolute, assurance that the objectives will be met. Because of the inherent limitations in internal control over financial reporting, no evaluation of controls can provide absolute assurance that all control issues and instances of fraud, if any, within the Company have been detected. These inherent limitations include the realities that judgments in decision making can be faulty and that breakdowns can occur because of simple error or mistake. Controls can also be circumvented by the individual acts of some persons, by collusion of two or more people, or by management override of the controls. The design of any system of controls is based in part on certain assumptions about the likelihood of future events, and there can be no assurance that any design will succeed in achieving its stated goals under all potential future conditions. Over time, controls may become inadequate because of changes in conditions or deterioration in the degree of compliance with policies or procedures. Because of the inherent limitations in a cost-effective control system, misstatements due to error or fraud may occur and not be detected.

Changes in Internal Control over Financial Reporting

The changes in the Company's internal control over financial reporting during the three months ended December 31, 2017, that have materially affected, or are reasonably likely to materially affect, the Company's internal control over financial reporting, are discussed above in Management's Plan to Remediate the Material Weakness.

PART II — OTHER INFORMATION

ITEM 1. LEGAL PROCEEDINGS

From time-to-time we are involved in claims and legal proceedings that arise in the ordinary course of our business. We are currently subject to several such claims and a small number of legal proceedings. We believe that these matters lack merit and we intend to vigorously defend against them. Based on currently available information, we do not believe that resolution of pending matters will have a material adverse effect on our financial condition, cash flows or results of operations. However, litigation is subject to inherent uncertainties, and there can be no assurances that our defenses will be successful or that any such lawsuit or claim would not have a material adverse impact on our business, financial condition, cash flows and results of operations in a particular period. Any claims or proceedings against us, whether meritorious or not, can have an adverse impact because of defense costs, diversion of management and operational resources, negative publicity and other factors. Any failure to obtain necessary licenses or other rights, or litigation arising out of intellectual property claims, could adversely affect our business.

Table of Contents

ITEM 1A. RISK FACTORS

Our operating results are difficult to predict and fluctuations in results may cause volatility in the price of our shares.

Our revenues and profitability are difficult to predict due to the nature of the markets in which we compete, fluctuating user demand, the uncertainty of current and future global economic conditions, and for many other reasons, including the following:

- Our operating results are highly dependent on the volume and timing of orders received during the quarter, which are difficult to forecast. Customers generally order on an as-needed basis and we typically do not obtain firm, long-term purchase commitments from our customers. As a result, our revenues in any quarter depend primarily on orders booked and shipped in that quarter.
- A significant portion of our quarterly retail sales typically occurs in the last weeks of each quarter, further increasing the difficulty in predicting quarterly revenues and profitability.
- Our sales are impacted by consumer demand and current and future global economic and political conditions, and can therefore fluctuate abruptly and significantly during periods of uncertain economic conditions or geographic distress, as well as from shifts in distributor inventory practices and consumer buying patterns.
- We must incur a large portion of our costs in advance of sales orders, because we must plan research and production, order components, buy tooling equipment, and enter into development, sales and marketing, and other operating commitments prior to obtaining firm commitments from our customers. This makes it difficult for us to rapidly adjust our costs during the quarter in response to a revenue shortfall, which could adversely affect our operating results.
- We engage in acquisitions and divestitures, and such activity varies from period to period. Such variance may affect our growth, our previous outlook and expectations, and comparisons of our operating results and financial statements between periods.
- We have attempted to simplify our organization, to reduce operating costs through expense reduction and global workforce reductions, to reduce the complexity of our product portfolio, and to better align costs with our current business as we expand from PC accessories to growth opportunities in accessories and other products for music, gaming, video collaboration, digital home, mobile devices and other product categories. We may not achieve the cost savings or other anticipated benefits from these efforts, and the success or failure of such efforts may cause our operating results to fluctuate and to be difficult to predict.
- Fluctuations in currency exchange rates can impact our revenues, expenses and profitability because we report our financial statements in U.S. Dollars, whereas a significant portion of our revenues and expenses are in other currencies. We attempt to adjust product prices over time to offset the impact of currency movements. However, over short periods of time, during periods of weakness in consumer spending or given high levels of competition in many product categories, our ability to change local currency prices to offset the impact of currency fluctuations is limited.

Because our operating results are difficult to predict, our results may be below the expectations of financial analysts and investors, which could cause the price of our shares to decline.

If we fail to innovate and develop new products in a timely and cost-effective manner for our new and existing product categories, our business and operating results could be adversely affected.

Our product categories are characterized by short product life cycles, frequent new product introductions, rapidly changing technology, dynamic consumer demand and evolving industry standards. As a result, we must continually

innovate in our new and existing product categories, introduce new products and technologies, and enhance existing products in order to remain competitive.

The success of our product portfolio depends on several factors, including our ability to:

Table of Contents

- Identify new features, functionality and opportunities;
- Anticipate technology, market trends and consumer preferences;
- Develop innovative, high-quality, and reliable new products and enhancements in a cost-effective and timely manner;
- Distinguish our products from those of our competitors; and
- Offer our products at prices and on terms that are attractive to our customers and consumers.

If we do not execute on these factors successfully, products that we introduce or technologies or standards that we adopt may not gain widespread commercial acceptance, and our business and operating results could suffer. In addition, if we do not continue to differentiate our products through distinctive, technologically advanced features, designs, and services that are appealing to our customers and consumers, as well as continue to build and strengthen our brand recognition and our access to distribution channels, our business could be adversely affected.

The development of new products and services is very difficult and requires high levels of innovation. The development process is also lengthy and costly. There are significant initial expenditures for research and development, tooling, manufacturing processes, inventory and marketing, and we may not be able to recover those investments. If we fail to accurately anticipate technological trends or our users' needs or preferences, are unable to complete the development of products and services in a cost-effective and timely fashion or are unable to appropriately increase production to fulfill customer demand, we will be unable to successfully introduce new products and services into the market or compete with other providers. Even if we complete the development of our new products and services in a cost-effective and timely manner, they may not be competitive with products developed by others, they may not achieve acceptance in the market at anticipated levels or at all, they may not be profitable or, even if they are profitable, they may not achieve margins as high as our expectations or as high as the margins we have achieved historically.

As we introduce new or enhanced products, integrate new technology into new or existing products, or reduce the overall number of products offered, we face risks including, among other things, disruption in customers' ordering patterns, excessive levels of new and existing product inventories, revenue deterioration in our existing product lines, insufficient supplies of new products to meet customers' demand, possible product and technology defects, and a potentially different sales and support environment. Premature announcements or leaks of new products, features or technologies may exacerbate some of these risks by reducing the effectiveness of our product launches, reducing sales volumes of current products due to anticipated future products, making it more difficult to compete, shortening the period of differentiation based on our product innovation, straining relationships with our partners or increasing market expectations for the results of our new products before we have had an opportunity to demonstrate the market viability of the products. Our failure to manage the transition to new products or the integration of new technology into new or existing products could adversely affect our business, results of operations, operating cash flows and financial condition.

We believe sales of PCs will continue to decline, and that our future growth will depend on our diversified product growth opportunities beyond the PC, and if we do not successfully execute on our growth opportunities, if our growth opportunities are more limited than we expect or if our sales of PC peripherals are less than we expect, our operating results could be adversely affected.

We have historically targeted peripherals for the PC platform. Consumer demand for PCs, especially in our traditional, mature markets such as North America, Western and Nordic Europe, Japan and Australia, has been declining and we expect it to continue to decline in the future. As a result, consumer demand for PC peripherals in many of our markets

is slowing and in some cases declining and we expect this trend may continue.

Our sales of PC peripherals might be less than we expect due to a decline in business or economic conditions in one or more of the countries or regions, a greater decline than we expect in demand for our products, our inability to successfully execute our sales and marketing plans, or for other reasons. Global economic concerns, such as the varying pace of global economic recovery, political uncertainties created by policy changes such as Brexit, the impact of sovereign debt issues in Europe, the impact of low oil prices on Russia and conflicts with either local or

Table of Contents

global financial implications in places such as Russia and Ukraine, and economic slowdown in China, create unpredictability and add risk to our future outlook.

As a result, we are focusing more of our attention, which may include the personnel, financial resources and management attention, on product innovations and growth opportunities, including products for the consumption of digital music, products for gaming, products for video collaboration, products for the digital home, and on other potential growth opportunities. Our investments may not result in the growth we expect, or when we expect it, for a variety of reasons including those described below.

Music. We are focused on products for the consumption of digital music as a sales growth area. Competition in the mobile speaker and headphone categories is intense, and we expect it to increase. If we are not able to grow our existing and acquired product lines, introduce differentiated product and marketing strategies to separate ourselves from competitors, our mobile speaker and audio headphone efforts will not be successful, and our business and results of operations could be adversely affected.

Gaming. We are building a diverse business that features a variety of gaming peripherals. The rapidly evolving and changing market and increasing competition increase the risk that we do not allocate our resources in line with the market and our business and our results of operations could be adversely affected.

Video Collaboration. While we view the small and medium sized user groups' opportunity to be large and relatively unaddressed, this is a new and evolving market segment that we are developing. If the market opportunity proves to exist, we expect increasing competition from the large competitors in the video conferencing market as well as potential new entrants.

Smart Home. While we are a leader in programmable, performance remote controls for home entertainment, the smart home market is still in its early stages and it is not yet clear when the category will produce dynamic growth or which products will succeed and be able to take advantage of market growth or to help define and grow the market. Despite its early stages, the smart home market already is experiencing increasing competition from strong competitors.

In addition to our current growth opportunities, our future growth may be reliant on our ability to identify and develop potential new growth opportunities. This process is inherently risky and will result in investments in time and resources for which we do not achieve any return or value.

Each of these growth categories and many of the growth opportunities that we may pursue are subject to constant and rapidly changing and evolving technologies and evolving industry standards and may be replaced by new technology concepts or platforms. Some of these growth categories and opportunities are also characterized by short product cycles, frequent new product introductions and enhancements and rapidly changing and evolving consumer preferences with respect to design and features that require calculated risk-taking and fast responsiveness and result in short opportunities to establish a market presence. In addition, some of these growth categories and opportunities are characterized by price competition, erosion of premium-priced segments and average selling prices, and sensitivity to general economic conditions and cyclical downturns. If we do not develop innovative and reliable peripherals and enhancements in a cost-effective and timely manner that are attractive to consumers in these markets, if we are otherwise unsuccessful entering and competing in these growth categories or responding to the rapidly changing conditions in these growth categories, if the growth categories in which we invest our limited resources do not emerge as the opportunities or do not produce the growth or profitability we expect, or when we expect it, or if we do not correctly anticipate changes and evolutions in technology and platforms, our business and results of operations could be adversely affected.

If we are not able to maintain and enhance our brands, or if our brands or reputation are damaged, our reputation, business and operating results could be adversely affected.

We have developed long-term value in our brands and have invested significantly in design and in our existing and new brands over the past several years. We believe that our design and brands have significantly contributed to the success of our business and that maintaining and enhancing our brands is very important to our future growth and success. Maintaining and enhancing our brands will require significant investments and will depend largely on our future design, products and marketing, which may not be successful and may damage our brands. Our brands and reputation are also dependent on third parties, such as suppliers, manufacturers, distributors, retailers, product

Table of Contents

reviewers and the media as well as consumer recommendations and referrals. Any negative effect on our brands, regardless of whether it is in our control, could adversely affect our reputation, business and results of operations.

If we do not compete effectively, demand for our products could decline and our business and operating results could be adversely affected.

The peripherals industry is intensely competitive. Most of our product categories are characterized by large, well-financed competitors, short product life cycles, continual performance enhancements, and rapid adoption of technological and product advancements by competitors in our retail markets. We experience aggressive price competition and other promotional activities from our primary competitors and from less-established brands, including brands owned by retail customers known as house brands. In addition, our competitors may offer customers terms and conditions that may be more favorable than our terms and conditions and may require us to take actions to increase our customer incentive programs, which could impact our revenues and operating margins.

In recent years, we have expanded the categories of products we sell and entered new markets. We remain alert to opportunities in new categories and markets. As we do so, we are confronting new competitors, many of which have more experience in the categories or markets and have greater marketing resources and brand name recognition than we have. In addition, because of the continuing convergence of the markets for computing devices and consumer electronics, we expect greater competition in the future from well-established consumer electronics companies in our developing categories as well as in future categories we might enter. Many of these companies, such as Microsoft, Apple, Google, Cisco, Sony Corporation, Polycom, Samsung and others, have greater financial, technical, sales, marketing and other resources than we have.

Microsoft, Apple and Google are leading producers of operating systems, hardware and applications with which our mice, keyboards and other products are designed to operate. In addition, Microsoft, Apple and Google each has significantly greater financial, technical, sales, marketing and other resources than Logitech, as well as greater name recognition and a larger customer base. As a result, Microsoft, Apple and Google each may be able to improve the functionality of its products, if any, or may choose to show preference to our competitors' products, to correspond with ongoing enhancements to its operating systems, hardware and software applications before we are able to make such improvements. This ability could provide Microsoft, Apple, Google or other competitors with significant lead-time advantages. In addition, Microsoft, Apple, Google or other competitors may be able to offer pricing advantages on bundled hardware and software products that we may not be able to offer, and may be financially positioned to exert significant downward pressure on product prices and upward pressure on promotional incentives in order to gain market share.

Music

Mobile Speakers. Our competitors for Bluetooth wireless speakers include Bose, JBL, Harmon Kardon, and Beats Electronics. Bose is our largest competitor. Apple's ownership of Beats Electronics may impact our access to shelf space in Apple retail stores and adversely impact our ability to succeed in this important growth market. Personal assistance and other devices that offer music, such as Amazon's Echo, may also compete with our products. Amazon is also a significant distributor for our products.

Audio-PC & Wearables. In the PC speakers category, our competitors include Bose, Cyber Acoustics, Phillips and Creative Labs, Inc. In the PC headset business, our main competitors include Plantronics and Altec Lansing. In-ear headphones competitors include Skull Candy, Sennheiser, Sony, Beats, and others.

Gaming

Competitors for our Gaming products include Razer USA Ltd., Corsair, SteelSeries, and Turtle Beach.

Video Collaboration

Our competitors for Video Collaboration products include Cisco Systems, Inc., Polycom, Inc., and AVer Information Inc.

Table of Contents

Smart Home

Direct competitors in the remote control market include pro-installer-focused Universal Remote Control Inc., and new “DIY” entrants from Savant Systems and Ray Enterprises. Indirect competition exists in the form of low-end “replacement remotes” such as Sony, RCA, GE, pure app-based solutions for smartphones and other mobile devices such as Peel, as well as device and/or subscriber-specific solutions from TV makers such as Samsung and Vizio and multisystem operators, or MSOs, such as Comcast and DirecTV.

Competition in the home control market also exists in form of home automation platforms such as Smart Things (owned by Samsung), Amazon with their Echo product, Google Home and Nest (owned by Alphabet), Wink and many other startups. Many of these products and brands are partners with Logitech as well via integrations with Harmony remotes.

Creativity & Productivity

Pointing Devices. Microsoft Corporation and HP Inc. are our main competitors. We also experience competition and pricing pressure from less-established brands, including house brands, which we believe have impacted our market share in some sales geographies.

Keyboards & Combo. Microsoft Corporation and Apple Inc. are our main competitors in our keyboard and combo product lines. We also experience competition and pricing pressure for keyboard and combos from less-established brands, including house brands.

Tablet & Other Accessories. Competitors in the tablet keyboard market are Apple, Zagg, Kensington, Belkin, Targus and other less-established brands. Although we are one of the leaders in the tablet keyboard market and continue to bring innovative offerings to the market, we expect the competition will increase. Competitors in the tablet case market include Apple, Otter, Speck and a large number of small brands.

PC Webcams. Our primary competitors for PC webcams are Microsoft Corporation and HP Inc. with various other manufacturers taking smaller market share. The worldwide market for consumer PC webcams has been declining, and as a result, fewer competitors have entered the market.

Our business depends in part on access to third-party platforms or technologies, and if the access is withdrawn, denied, or is not available on terms acceptable to us, or if the platforms or technologies change without notice to us, our business and operating results could be adversely affected.

Our peripherals business has historically been built largely around the PC platform, which over time became relatively open, and its inputs and operating system standardized. With the growth of mobile, tablet, gaming and other computer devices, the number of platforms has grown, and with it the complexity and increased need for us to have business and contractual relationships with the platform owners in order to produce products compatible with these platforms. Our product portfolio includes current and future products designed for use with third-party platforms or software, such as the Apple iPad, iPod, iPhone and Siri, the Android phones and tablets, Google Home and Amazon Alexa. Our business in these categories relies on our access to the platforms of third parties, some of whom are our competitors. Platform owners that are competitors have a competitive advantage in designing products for their platforms and may produce peripherals or other products that work better, or are perceived to work better, than our products in connection with those platforms. As we expand the number of platforms and software applications with which our products are compatible, we may not be successful in launching products for those platforms or software applications, we may not be successful in establishing strong relationships with the new platform or software owners, or we may negatively impact our ability to develop and produce high-quality products on a timely basis for those platforms and software applications or we may otherwise adversely affect our relationships with existing platform or software owners.

Our access to third-party platforms may require paying a royalty, which lowers our product margins, or may otherwise be on terms that are not acceptable to us. In addition, the third-party platforms or technologies used to interact with our product portfolio can be delayed in production or can change without prior notice to us, which can result in our having excess inventory or lower margins.

Table of Contents

If we are unable to access third-party platforms or technologies, or if our access is withdrawn, denied, or is not available on terms acceptable to us, or if the platforms or technologies are delayed or change without notice to us, our business and operating results could be adversely affected.

If we do not accurately forecast market demand for our products, our business and operating results could be adversely affected.

We use our forecasts of product demand to make decisions regarding investments of our resources and production levels of our products. Although we receive forecasts from our customers, many are not obligated to purchase the forecasted demand. Also, actual sales volumes for individual products in our retail distribution channel can be volatile due to changes in consumer preferences and other reasons. In addition, our products have short product life cycles, so a failure to accurately predict high demand for a product can result in lost sales that we may not recover in subsequent periods, or higher product costs if we meet demand by paying higher costs for materials, production and delivery. We could also frustrate our customers and lose shelf space. Our failure to predict low demand for a product can result in excess inventory, lower cash flows and lower margins if we are required to reduce product prices in order to reduce inventories.

If our sales channel partners have excess inventory of our products or decide to decrease their inventories for any reason, they may decrease the amount of products they acquire in subsequent periods, causing disruption in our business and adversely affecting our forecasts and sales.

Over the past few years, we have expanded the types of products we sell, and the geographic markets in which we sell them. The changes in our product portfolio and the expansion of our sales markets have increased the difficulty of accurately forecasting product demand.

In addition, during fiscal year 2016 we increased the percentage of our products that we manufacture in our own facilities. This increases the inventory that we purchase and maintain to support such manufacturing. We are also utilizing sea shipments more extensively than air delivery, which will cause us to build and ship products to our distribution centers earlier and will also result in increases in inventory. These operational shifts increase the risk that we have excess or obsolete inventory if we do not accurately forecast product demand.

We have experienced large differences between our forecasts and actual demand for our products. We expect other differences between forecasts and actual demand to arise in the future. If we do not accurately predict product demand, our business and operating results could be adversely affected.

Our success largely depends on our ability to hire, retain, integrate and motivate sufficient numbers of qualified personnel, including senior management. Our strategy and our ability to innovate, design and produce new products, sell products, maintain operating margins and control expenses depend on key personnel that may be difficult to replace.

Our success depends on our ability to attract and retain highly skilled personnel, including senior management and international personnel. From time to time, we experience turnover in some of our senior management positions.

We compensate our employees through a combination of salary, bonuses, benefits and equity compensation. Recruiting and retaining skilled personnel, including software and hardware engineers, is highly competitive. If we fail to provide competitive compensation to our employees, it will be difficult to retain, hire and integrate qualified employees and contractors, and we may not be able to maintain and expand our business. If we do not retain our senior managers or other key employees for any reason, we risk losing institutional knowledge, experience, expertise and other benefits of continuity as well as the ability to attract and retain other key employees. In addition, we must

carefully balance the size of our employee base with our current infrastructure, management resources and anticipated operating cash flows. If we are unable to manage the size of our employee base, particularly engineers, we may fail to develop and introduce new products successfully and in a cost-effective and timely manner. If our revenue growth or employee levels vary significantly, our operating cash flows and financial condition could be adversely affected. Volatility or lack of positive performance in our stock price, including declines in our stock prices in the past year, may also affect our ability to retain key employees, many of whom have been granted equity incentives. Logitech's practice has been to provide equity incentives to its employees, but the number of shares available for equity grants is limited. We may find it difficult to provide competitive equity incentives, and our ability to hire, retain and motivate key personnel may suffer.

Table of Contents

Recently and in past years, we have initiated reductions in our workforce to align our employee base with our business strategy, our anticipated revenue base or with our areas of focus. We have also experienced turnover in our workforce. These reductions and turnover have resulted in reallocations of duties, which could result in employee uncertainty and discontent. Reductions in our workforce could make it difficult to attract, motivate and retain employees, which could adversely affect our business.

Our gross margins can vary significantly depending on multiple factors, which can result in unanticipated fluctuations in our operating results.

Our gross margins can vary due to consumer demand, competition, product pricing, product life cycle, product mix, new product introductions, unit volumes, acquisitions and divestitures, commodity, supply chain and logistics costs, capacity utilization, geographic sales mix, currency exchange rates, and the complexity and functionality of new product innovations. In particular, if we are not able to introduce new products in a timely manner at the product cost we expect, or if consumer demand for our products is less than we anticipate, or if there are product pricing, marketing and other initiatives by our competitors to which we need to react or that are initiated by us to drive sales that lower our margins, then our overall gross margin will be less than we project.

In addition, our gross margins may vary significantly by product line, sales geography and customer type, as well as within product lines. When the mix of products sold shifts from higher margin product lines to lower margin product lines, to lower margin sales geographies, or to lower margin products within product lines, our overall gross margins and our profitability may be adversely affected.

As we expand within and into new product categories, our products in those categories may have lower gross margins than in our traditional product categories. Consumer demand in these product categories, based on style, color and other factors, tends to be less predictable and tends to vary more across geographic markets. As a result, we may face higher up-front investments, inventory costs associated with attempting to anticipate consumer preferences, and increased inventory write-offs. If we are unable to offset these potentially lower margins by enhancing the margins in our more traditional product categories, our profitability may be adversely affected.

The impact of these factors on gross margins can create unanticipated fluctuations in our operating results, which may cause volatility in the price of our shares.

As we continue our efforts to lower our costs and improve our operating leverage, we may or may not fully realize our goals.

Our strategy over the past several years has been based in part on simplifying the organization, reducing operating costs through global workforce reductions and a reduction in the complexity of our product portfolio, with the goal of better aligning costs with our current business. We restructured our business in fiscal years 2014 through 2016, and we may continue to divest or discontinue non-strategic product categories. During the third quarter of fiscal year 2016, we divested our Lifesize video conferencing business and completed our exit from the OEM business. In addition, we are continuing the rationalization of our general and administrative expense, infrastructure and indirect procurement to reduce operating expenses.

Our ability to achieve the desired and anticipated cost savings and other benefits from these simplification, cost-cutting and restructuring activities, and within our desired and expected timeframes, are subject to many estimates and assumptions, and the actual savings and timing for those savings may vary materially based on factors such as local labor regulations, negotiations with third parties, and operational requirements. These estimates and assumptions are also subject to significant economic, competitive and other uncertainties, some of which are beyond

our control. There can be no assurance that we will fully realize the desired and anticipated benefits from these activities. To the extent that we are unable to improve our financial performance, further restructuring measures may be required in the future. Furthermore, we are expecting to be able to use the anticipated cost savings from these activities to fund and support our current growth opportunities and incremental investments for future growth. If the cost-savings do not materialize as anticipated, or within our expected timeframes, our ability to invest in growth may be limited and our business and operating results may be adversely affected. As we grow, explore new opportunities and markets, hire new management and other personnel, and fund research and development, marketing, brand development, sales, operations, investments in intellectual property and acquisitions to support this growth and our new opportunities, some or all of which may not succeed, we expect to experience continued pressure on our cost structure and expenses.

Table of Contents

As part of the restructuring plans, we reduced the size of our product portfolio and the assortment of similar products at similar price points within each product category over the past several fiscal years. While we are constantly replacing products and are dependent on the success of our new products, this product portfolio simplification has made us even more dependent on the success of the new products that we are introducing.

As we focus on growth opportunities, we are divesting or discontinuing non-strategic product categories and pursuing strategic acquisitions and investments, which could have an adverse impact on our business.

We continue to review our product portfolio and update our non-strategic product categories and products. During the third quarter of fiscal year 2016, we divested our Lifesize video conferencing business and completed our exit from the OEM business. If we are unable to effect sales on favorable terms or if realignment is more costly or distracting than we expect or has a negative effect on our organization, employees and retention, then our business and operating results may be adversely affected. Discontinuing products with service components may also cause us to continue to incur expenses to maintain services within the product life cycle or to adversely affect our customer and consumer relationships and brand. Divestitures may also involve warranties, indemnification or covenants that could restrict our business or result in litigation, additional expenses or liabilities. In addition, discontinuing product categories, even categories that we consider non-strategic, reduces the size and diversification of our business and causes us to be more dependent on a smaller number of product categories.

As we attempt to grow our business in strategic product categories and emerging market geographies, we will consider growth through acquisition or investment. We will evaluate acquisition opportunities that could provide us with additional product or service offerings or with additional industry expertise, assets and capabilities. For example, we acquired ASTRO Gaming to expand into the console gaming market, we acquired Jaybird to expand into the wireless audio wearables market, and we acquired Saitek to expand into the gaming flight simulation and farm simulation market. Acquisitions could result in difficulties integrating acquired operations, products, technology, internal controls, personnel and management teams and result in the diversion of capital and management's attention away from other business issues and opportunities. If we fail to successfully integrate acquisitions, our business could be harmed. Acquisitions could also result in the assumption of known and unknown liabilities, dilutive issuances of our equity securities, the incurrence of debt, disputes over earn-outs or other litigation, and adverse effects on relationships with our and our target's employees, customers and suppliers. Moreover, our acquisitions may not be successful in achieving our desired strategy, product, financial or other objectives or expectations, which would also cause our business to suffer. Acquisitions can also lead to large non-cash charges that can have an adverse effect on our results of operations as a result of write-offs for items such as future impairments of intangible assets and goodwill or the recording of share-based compensation. Several of our past acquisitions have not been successful and have led to impairment charges, including \$122.7 million and \$214.5 million non-cash goodwill impairment charges in fiscal years 2015 and 2013, respectively, related to our Lifesize video conferencing business which is reported in discontinued operations. Acquisitions and divestitures may also cause our operating results to fluctuate and make it difficult for investors to compare operating results and financial statements between periods. In addition, from time to time we make strategic venture investments in other companies that provide products and services that are complementary to ours. If these investments are unsuccessful, this could have an adverse impact on our results of operations, operating cash flows and financial condition.

We rely on third parties to sell and distribute our products, and we rely on their information to manage our business. Disruption of our relationship with these channel partners, changes in or issues with their business practices, their failure to provide timely and accurate information, changes in distribution partners, practices or models or conflicts among our channels of distribution could adversely affect our business, results of operations, operating cash flows and financial condition.

While most of our sales are made to sales channel partners, we are dependent on those distributors and retailers to distribute and sell our products to other sales channel partners and ultimately to consumers. The sales and business practices of such sales channel partners, their compliance with laws and regulations, and their reputations - of which we may or may not be aware - may affect our business and our reputation.

The impact of economic conditions, evolving consumer preferences, and purchasing patterns on our distribution partners, or competition between our sales channels, could result in sales channel disruption. For example, if sales at large retail stores are displaced as a result of bankruptcy, competition from Internet sales

Table of Contents

channels or otherwise, our product sales could be adversely affected. Any loss of a major partner or distribution channel or other channel disruption could make us more dependent on alternate channels, increase pricing and promotional pressures from other partners and distribution channels, increase our marketing costs, or adversely impact buying and inventory patterns, payment terms or other contractual terms.

Our sales channel partners, the distributors and retailers who distribute and sell our products, also sell products offered by our competitors and, in the case of retailer house brands, may also be our competitors. If product competitors offer our sales channel partners more favorable terms, have more products available to meet their needs, or utilize the leverage of broader product lines sold through the channel, or if our retailer channel partners show preference for their own house brands, our sales channel partners may de-emphasize or decline to carry our products. In addition, certain of our sales channel partners could decide to de-emphasize the product categories that we offer in exchange for other product categories that they believe provide them with higher returns. If we are unable to maintain successful relationships with these sales channel partners or to maintain our distribution channels, our business will suffer.

As we expand into new product categories and markets in pursuit of growth, we will have to build relationships with new channel partners and adapt to new distribution and marketing models. These new partners, practices and models may require significant management attention and operational resources and may affect our accounting, including revenue recognition, gross margins, and the ability to make comparisons from period to period. Entrenched and more experienced competitors will make these transitions difficult. If we are unable to build successful distribution channels or successfully market our products in these new product categories, we may not be able to take advantage of the growth opportunities, and our business and our ability to grow our business could be adversely affected.

We reserve for cooperative marketing arrangements, direct and indirect customer incentive programs and pricing programs with our sales channel partners. These reserves are based on judgments and estimates, using historical experience rates, inventory levels in distribution, current trends and other factors. There could be significant differences between the actual costs of such arrangements and programs and our estimates.

We use retail sell-through data, which represents sales of our products by our direct retailer customers to consumers, and by our distributor customers to their customers, along with other metrics, to assess consumer demand for our products. Sell-through data is subject to limitations due to collection methods and the third-party nature of the data and thus may not be an accurate indicator of actual consumer demand for our products. In addition, the customers supplying sell-through data vary by geographic region and from period to period, but typically represent a majority of our retail sales. In addition, we rely on channel inventory data from our retailer and distributor customers. If we do not receive this information on a timely and accurate basis, or if we do not properly interpret this information, our results of operations and financial condition may be adversely affected.

Our principal manufacturing operations and third-party contract manufacturers are located in China and Southeast Asia, which exposes us to risks associated with doing business in that geographic area.

We produce approximately half of our products at facilities we own in China. The majority of our other production is performed by third-party contract manufacturers, including other design manufacturers, in China and Malaysia.

Our manufacturing operations in China could be adversely affected by changes in the interpretation and enforcement of legal standards, strains on China's available labor pool, changes in labor costs and other employment dynamics, high turnover among Chinese employees, infrastructure issues, import-export issues, currency transfer restrictions, natural disasters, conflicts or disagreements between China and Taiwan or China and the United States, labor unrest, and other trade customs and practices that are dissimilar to those in the United States and Europe. Interpretation and enforcement of China's laws and regulations continue to evolve and we expect differences in interpretation and enforcement to continue in the foreseeable future.

Our manufacturing operations at third-party contractors could be adversely affected by contractual disagreements, by labor unrest, by natural disasters, by strains on local communications, trade, and other infrastructures, by competition for the available labor pool or manufacturing capacity, by increasing labor and other costs, and by other trade customs and practices that are dissimilar to those in the United States and Europe.

Table of Contents

Further, we may be exposed to fluctuations in the value of the local currency in the countries in which manufacturing occurs. Future appreciation of these local currencies could increase our component and other raw material costs. In addition, our labor costs could continue to rise as wage rates increase and the available labor pool declines. These conditions could adversely affect our financial results.

We purchase key components and products from a limited number of sources, and our business and operating results could be adversely affected if supply were delayed or constrained or if there were shortages of required components.

We purchase certain products and key components from a limited number of sources. If the supply of these products or key components, such as micro-controllers, and optical sensors, were to be delayed or constrained, or if one or more of our single-source suppliers goes out of business as a result of adverse global economic conditions or natural disasters, we might be unable to find a new supplier on acceptable terms, or at all, and our product shipments to our customers could be delayed, which could adversely affect our business, financial condition and operating results.

Lead times for materials, components and products ordered by us or by our contract manufacturers can vary significantly and depend on factors such as contract terms, demand for a component, and supplier capacity. From time to time, we have experienced component shortages and extended lead times on semiconductors, such as micro-controllers and optical sensors, and base metals used in our products. Shortages or interruptions in the supply of components or subcontracted products, or our inability to procure these components or products from alternate sources at acceptable prices in a timely manner, could delay shipment of our products or increase our production costs, which could adversely affect our business and operating results.

The moral and regulatory imperatives to avoid purchasing conflict minerals are causing us to incur additional expenses, could limit the supply and increase the cost of certain metals used in manufacturing our products and could adversely affect the distribution and sales of our products.

As part of the Dodd-Frank Wall Street Reform and Consumer Protection Act, the SEC adopted disclosure requirements regarding the use of certain minerals, known as conflict minerals, which are mined from the Democratic Republic of Congo and adjoining countries, as well as procedures regarding a manufacturer's efforts to identify and prevent the sourcing of such minerals and metals produced from those minerals. Additional reporting obligations are being considered by the European Union. The implementation of the existing U.S. requirements and any additional requirements in Europe could affect sourcing at competitive prices and availability in sufficient quantities of certain minerals used in the manufacture of our products. The number of suppliers who provide conflict-free minerals may be limited, and the implementation of these requirements may decrease the number of suppliers capable of supplying our needs for certain metals. In addition, there may be material costs associated with complying with the disclosure requirements, such as costs related to the due diligence process of determining the source of certain minerals used in our products, as well as costs of possible changes to products, processes, or sources of supply as a consequence of such verification activities. As our supply chain is complex and we use contract manufacturers for some of our products, we may not be able to sufficiently verify the origins of the relevant minerals used in our products through the due diligence procedures that we implement, which may adversely affect our reputation. We may also encounter challenges to satisfy those customers who require that all of the components of our products be certified as conflict-free, which could, if we are unable to satisfy their requirements or pass through any increased costs associated with meeting their requirements place us at a competitive disadvantage, adversely affect our business and operating results, or both. We filed our report for the calendar year 2016 with the SEC on May 30, 2017.

If we do not successfully coordinate the worldwide manufacturing and distribution of our products, we could lose sales.

Our business requires us to coordinate the manufacture and distribution of our products over much of the world. We rely on third parties to manufacture many of our products, manage centralized distribution centers, and transport our products. If we do not successfully coordinate the timely manufacturing and distribution of our products, if our manufacturers, distribution logistics providers or transport providers are not able to successfully and timely process our business or if we do not receive timely and accurate information from such providers, and especially if we expand into new product categories or our business grows in volume, we may have an insufficient supply of products to meet customer demand, we could lose sales, we may experience a build-up in inventory, we may incur additional costs, and our financial performance and reporting may be adversely affected.

Table of Contents

By locating our manufacturing in China and Southeast Asia, we are reliant on third parties to get our products to distributors around the world. Transportation costs, fuel costs, labor unrest, natural disasters and other adverse effects on our ability, timing and cost of delivering products can increase our inventory, decrease our margins, adversely affect our relationships with distributors and other customers and otherwise adversely affect our results of operations and financial condition.

A significant portion of our quarterly retail orders and product deliveries generally occur in the last weeks of the fiscal quarter. This places pressure on our supply chain and could adversely affect our revenues and profitability if we are unable to successfully fulfill customer orders in the quarter.

We conduct operations in a number of countries, and have invested significantly in growing our sales and marketing activities in China, and the effect of business, legal and political risks associated with international operations could adversely affect us.

We conduct operations in a number of countries, and have invested significantly in growing our personnel and sales and marketing activities in China and, to a lesser extent, other emerging markets. We may also increase our investments to grow sales in other emerging markets, such as Latin America, Eastern Europe, the Middle East and Africa. There are risks inherent in doing business in international markets, including:

- Difficulties in staffing and managing international operations;
- Compliance with laws and regulations, including environmental, tax, import/export and anti-corruption laws, which vary from country to country and over time, increasing the costs of compliance and potential risks of non-compliance;
- Varying laws, regulations and other legal protections, uncertain and varying enforcement of those laws and regulations, dependence on local authorities, and the importance of local networks and relationships;
- Exposure to political and financial instability, especially with the uncertainty associated with the ongoing sovereign debt crisis in certain Euro zone countries and the stability of the European Union, which may lead to reduced sales, currency exchange losses and collection difficulties or other losses;
- Political and economic uncertainty around the world, including uncertainty resulting from the recent United States presidential and congressional elections, change of administration in the United States and the United Kingdom's referendum in June 2016, and other national elections and policy shifts;
- Import or export restrictions or licensing requirements that could affect some of our products, including those with encryption technology;
- Trade protection measures, custom duties, tariffs, import or export duties, and other trade barriers, restrictions and regulations;
- Lack of infrastructure or services necessary or appropriate to support our products and services;
- Exposure to fluctuations in the value of local currencies;
- Difficulties and increased costs in establishing sales and distribution channels in unfamiliar markets, with their own market characteristics and competition, including entrenched local competition;

- Weak protection of our intellectual property rights;
- Higher credit risks;
- Changes in VAT (value-added tax) or VAT reimbursement;
- Imposition of currency exchange controls;
- Delays from customs brokers or government agencies; and

Table of Contents

- A broad range of customs, consumer trends, and more.

Any of these risks could adversely affect our business, financial condition and operating results.

Sales growth in key markets, including China, is an important part of our expectations for our business. As a result, if economic, political or business conditions deteriorate in these markets, or if one or more of the risks described above materializes in these markets, our overall business and results of operations will be adversely affected.

We have also invested significantly in our manufacturing facilities in China. Policy changes in the United States or other countries, given our lack of manufacturing in those countries or for other protectionist reasons, could result in tariffs or other adverse tax consequences or may cause us to change the structure of how we currently operate, any of which could adversely affect our business and results of operations.

Our financial performance is subject to risks associated with fluctuations in currency exchange rates.

A significant portion of our business is conducted in currencies other than the U.S. Dollar. Therefore, we face exposure to movements in currency exchange rates.

Our primary exposure to movements in currency exchange rates relates to non-U.S. Dollar denominated sales and operating expenses worldwide. For the three months ended December 31, 2017, approximately 47% of our revenue was in non-U.S. denominated currencies. The weakening of currencies relative to the U.S. Dollar adversely affects the U.S. Dollar value of our non-U.S. Dollar-denominated sales and earnings. If we raise international pricing to compensate, it could potentially reduce demand for our products, adversely affecting our sales and potentially having an adverse impact on our market share. Margins on sales of our products in non-U.S. Dollar denominated countries and on sales of products that include components obtained from suppliers in non-U.S. Dollar denominated countries could be adversely affected by currency exchange rate fluctuations. In some circumstances, for competitive or other reasons, we may decide not to raise local prices to fully offset the U.S. Dollar's strengthening, which would adversely affect the U.S. Dollar value of our non-U.S. Dollar-denominated sales and earnings. Competitive conditions in the markets in which we operate may also limit our ability to increase prices in the event of fluctuations in currency exchange rates. Conversely, strengthening of currency rates may also increase our product component costs and other expenses denominated in those currencies, adversely affecting operating results. We further note that a larger portion of our sales than of our expenses are denominated in non-U.S. denominated currencies.

We use derivative instruments to hedge certain exposures to fluctuations in currency exchange rates. The use of such hedging activities may not offset any, or more than a portion, of the adverse financial effects of unfavorable movements in currency exchange rates over the limited time the hedges are in place and do not protect us from long term shifts in currency exchange rates.

As a result, fluctuations in currency exchange rates could adversely affect our business, operating results and financial condition. Moreover, these exposures may change over time.

As a company operating in many markets and jurisdictions and expanding into new growth categories, and as a Swiss, dual - listed company, we are subject to risks associated with new, existing and potential future laws and regulations.

Based on our current business model and as we expand into new markets and product categories, we must comply with a wide variety of laws, standards and other requirements governing, among other things, health and safety, hazardous materials usage, product-related energy consumption, packaging, recycling and environmental matters. Our products may be required to obtain regulatory approvals and satisfy other regulatory concerns in the various

jurisdictions where they are manufactured, sold or both. These requirements create procurement and design challenges, which, among other things, require us to incur additional costs identifying suppliers and contract manufacturers who can provide or obtain compliant materials, parts and end products. Failure to comply with such requirements can subject us to liability, additional costs, and reputational harm and, in severe cases, force us to recall products or prevent us from selling our products in certain jurisdictions.

Table of Contents

As a Swiss company with shares listed on both the SIX Swiss Exchange and the Nasdaq Global Select Market, we are also subject to both Swiss and United States corporate governance and securities laws and regulations. In addition to the extra costs and regulatory burdens of our dual regulatory obligations, the two regulatory regimes may not always be compatible and may impose disclosure obligations, operating restrictions or tax effects on our business to which our competitors and other companies are not subject. For example, on January 1, 2014, subject to certain transitional provisions, the Swiss Federal Council Ordinance Against Excessive Compensation at Public Companies (the “Ordinance”) became effective in connection with the Minder initiative approved by Swiss voters during 2013. The Ordinance, among other things, (a) requires a binding shareholder “say on pay” vote with respect to the compensation of members of our executive management and Board of Directors, (b) generally prohibits the making of severance, advance, transaction premiums and similar payments to members of our executive management and Board of Directors, (c) imposes other restrictive compensation practices, and (d) requires that our articles of incorporation specify various compensation-related matters. In addition, during 2013, Swiss voters considered an initiative to limit pay for a chief executive officer to a multiple of no more than twelve times the salary of the lowest-paid employee. Although voters rejected that initiative, it did receive substantial voter support. The Ordinance, potential future initiatives relating to corporate governance or executive compensation, and Swiss voter sentiment in favor of such regulations may increase our non-operating costs and adversely affect our ability to attract and retain executive management and members of our Board of Directors.

We prepare our consolidated financial statements in accordance with GAAP which are subject to interpretation or changes by the FASB, the SEC, and other various bodies formed to promulgate and interpret appropriate accounting principles. New accounting pronouncements and changes in accounting principles have occurred in the past and are expected to occur in the future which may have a significant effect on our financial results or our compliance with regulations.

As a result of changes in tax laws, treaties, rulings, regulations or agreements, or their interpretation, of Switzerland or any other country in which we operate, the loss of a major tax dispute or a successful challenge to our operating structure, intercompany pricing policies or the taxable presence of our key subsidiaries in certain countries, or other factors, our effective income tax rates may increase in the future, which could adversely affect our net income and cash flows.

We operate in multiple jurisdictions and our profits are taxed pursuant to the tax laws of these jurisdictions. Our effective income tax rate may be affected by changes in or interpretations of tax laws, treaties, rulings, regulations or agreements in any given jurisdiction, utilization of net operating loss and tax credit carryforwards, changes in geographical allocation of income and expense, and changes in management’s assessment of matters such as the realizability of deferred tax assets. In the past, we have experienced fluctuations in our effective income tax rate. Our effective income tax rate in a given fiscal year reflects a variety of factors that may not be present in the succeeding fiscal year or years. There is no assurance that our effective income tax rate will not change in future periods.

We are incorporated in the Canton of Vaud in Switzerland and our effective income tax rate benefits from a longstanding ruling from the Canton of Vaud. The tax rules in Switzerland are expected to change in response to certain guidance and demands from both the European Union and the Organization for Economic Co-operation and Development and that could have an adverse effect on our tax ruling and effective income tax rate. Switzerland’s implementation of any material change in tax laws or policies or its adoption of new interpretations of existing tax laws and rulings, or changes in our tax ruling from the Canton of Vaud, could result in a higher effective income tax rate on our worldwide earnings and such change could adversely affect our net income.

We file Swiss and foreign tax returns. We are frequently subject to tax audits, examinations and assessments in various jurisdictions. If any tax authority successfully challenges our operational structure, intercompany pricing policies or the taxable presence of our key subsidiaries in certain countries, if the terms of certain income tax treaties

are interpreted in a manner that is adverse to our structure, or if we lose a material tax dispute in any country, our effective income tax rate could increase. For example, policy changes in the United States or China predicated on our presence in those countries could adversely affect where we recognize profit and our effective income tax rate. A material assessment by a governing tax authority could adversely affect our profitability. If our effective income tax rate increases in future periods, our net income and cash flows could be adversely affected.

Claims by others that we infringe their proprietary technology could adversely affect our business.

Table of Contents

We have been expanding the categories of products we sell, such as entering new markets and introducing products for tablets, other mobile devices, digital music, and video collaboration. We expect to continue to enter new categories and markets. As we do so, we face an increased risk that claims alleging we infringe the patent or other intellectual property rights of others, regardless of the merit of the claims, may increase in number and significance. Infringement claims against us may also increase as the functionality of video, voice, data and conferencing products begin to overlap. This risk is heightened by the increase in lawsuits brought by holders of patents that do not have an operating business or are attempting to license broad patent portfolios and by the increasing attempts by companies in the technology industries to enjoin their competitors from selling products that they claim infringe their intellectual property rights. Intellectual property lawsuits are subject to inherent uncertainties due to the complexity of the technical issues involved, and we cannot be certain that we will be successful in defending ourselves against intellectual property claims. A successful claimant could secure a judgment that requires us to pay substantial damages or prevents us from distributing certain products or performing certain services. We might also be required to seek a license for the use of such intellectual property, which may not be available on commercially acceptable terms or at all. Alternatively, we may be required to develop non-infringing technology, which could require significant effort and expense and may ultimately not be successful. Any claims or proceedings against us, whether meritorious or not, could be time consuming, result in costly litigation or the diversion of significant operational resources, or require us to enter into royalty or licensing agreements, any of which could materially and adversely affect our business and results of operations.

We may be unable to protect our proprietary rights. Unauthorized use of our technology may result in the development of products that compete with our products.

Our future success depends in part on our proprietary technology, technical know-how and other intellectual property. We rely on a combination of patent, trade secret, copyright, trademark and other intellectual property laws, and confidentiality procedures and contractual provisions such as nondisclosure terms and licenses, to protect our intellectual property.

We hold various United States patents and pending applications, together with corresponding patents and pending applications from other countries. It is possible that any patent owned by us will be invalidated, deemed unenforceable, circumvented or challenged, that the patent rights granted will not provide competitive advantages to us, or that any of our pending or future patent applications will not be granted. In addition, other intellectual property laws or our confidentiality procedures and contractual provisions may not adequately protect our intellectual property. Also, others may independently develop similar technology, duplicate our products, or design around our patents or other intellectual property rights. Unauthorized parties have copied and may in the future attempt to copy aspects of our products or to obtain and use information that we regard as proprietary. Any of these events could adversely affect our business, financial condition and operating results.

Product quality issues could adversely affect our reputation, business and our operating results.

The market for our products is characterized by rapidly changing technology and evolving industry standards. To remain competitive, we must continually introduce new products and technologies. The products that we sell could contain defects in design or manufacture. Defects could also occur in the products or components that are supplied to us. There can be no assurance we will be able to detect and remedy all defects in the hardware and software we sell. Failure to do so could result in product recalls, product liability claims and litigation product redesign efforts, lost revenue, loss of reputation, and significant warranty and other expenses to remedy.

While we maintain reserves for reasonably estimable liabilities and purchase liability insurance, our reserves may not be adequate to cover such claims and liabilities and our insurance is subject to deductibles and may not be adequate to cover such claims and liabilities. Furthermore, our contracts with distributors and retailers may contain warranty,

indemnification and other provisions related to product quality issues, and claims under those provisions may adversely affect our business and operating results.

Significant disruptions in, or breaches in security of, our websites or information technology systems could adversely affect our business.

As a consumer electronics company, our websites are an important presentation of our company, identity and brands and an important means of interaction with and source of information for consumers of our products. We also rely on our centralized information technology systems for product-related information and to store intellectual property, forecast our business, maintain financial records, manage operations and inventory, and operate other

Table of Contents

critical functions. We allocate significant resources to maintain our information technology systems and deploy network security, data encryption, training and other measures to protect against unauthorized access or misuse. Nevertheless, our websites and information technology systems are susceptible to damage, disruptions or shutdowns due to power outages, hardware failures, structural or operational failures, computer viruses, attacks by computer hackers, other data security issues, telecommunication failures, user error, malfeasance, catastrophes, system or software upgrades, integration or migration, or other foreseeable and unforeseen events. Breaches or disruptions of our websites or information technology systems, breaches of confidential information, data corruption or other data security issues could adversely affect our brands, reputation, relationships with customers or business partners, or consumer or investor perception of our company, business or products or result in disruptions of our operations, loss of intellectual property or our customers' or our business partners' data, reduced value of our investments in our brands, design, research and development or engineering, or costs to address regulatory inquiries or actions or private litigation, to respond to customers or partners or to rebuild or restore our websites or information technology systems.

We have identified a material weakness in our internal control over financial reporting which, if not remediated, could adversely affect investor confidence in our financial reports, our business and our stock price.

As disclosed in Part 1, Item 4 of this report, we identified a material weakness in our internal control over financial reporting. The material weakness was identified during the preparation of our audited financial statements for the year ended March 31, 2017. A material weakness is defined as a deficiency, or combination of deficiencies, in internal control over financial reporting, such that there is a reasonable possibility that a material misstatement of our annual or interim financial statements will not be prevented or detected on a timely basis. As a result of the material weakness identified, our management concluded that our internal control over financial reporting was not effective as of March 31, 2017, based on criteria established in the framework in Internal Control-Integrated Framework (2013) issued by the Committee of Sponsoring Organizations of the Treadway Commission. We are actively engaged in implementing a remediation plan designed to address this material weakness. In the past, we have identified material weaknesses in our internal control over financial reporting, as described in our previous Annual Reports on Form 10-K. If our remediation measures are insufficient to address this material weakness, or if additional material weaknesses in our internal control over financial reporting are discovered or occur in the future, our consolidated financial statements may contain material misstatements, and we could be required to restate our financial results. In addition to potentially adversely affecting investors' confidence, any restatement of our consolidated financial statements could lead to potential litigation against us, which, whether meritorious or not, could be time-consuming, costly or divert significant operational resources, any of which could adversely affect our business and results of our operations.

The collection, storage, transmission, use and distribution of user data could give rise to liabilities and additional costs of operation as a result of laws, governmental regulation and risks of security breaches.

In connection with certain of our products, we collect data related to our consumers. This information is increasingly subject to legislation and regulations in numerous jurisdictions around the world, and especially in Europe. Government actions are typically intended to protect the privacy and security of personal information and its collection, storage, transmission, use and distribution in or from the governing jurisdiction. In addition, because various jurisdictions have different laws and regulations concerning the use, storage and transmission of such information, we may face requirements that pose compliance challenges in existing markets as well as new international markets that we seek to enter. The collection of user data heightens the risk of security breaches and other data security issues related to our IT systems and the systems of third-party data storage and other service and IT providers. Such laws and regulations, and the variation between jurisdictions, as well as additional security measures and risk, could subject us to costs, liabilities or negative publicity that could adversely affect our business.

We recently upgraded our worldwide business application suite, and difficulties, distraction or disruptions may interrupt our normal operations and adversely affect our business and operating results.

During fiscal years 2014 and 2015, we devoted significant resources to the upgrade of our worldwide business application suite to Oracle's version R12. We implemented that upgrade in fiscal year 2016 and will continue to review the success of that implementation during fiscal year 2018. As a result of our transition to the new business application suite, we may experience difficulties with our systems, management distraction, lack of visibility into our business operations and results, and significant business disruptions. Difficulties with our systems may interrupt our normal operations, including our enterprise resource planning, forecasting, demand planning, supply planning,

Table of Contents

intercompany processes, promotion management, internal financial controls, pricing, and our ability to provide quotes, process orders, ship products, provide services and support to our customers and consumers, bill and track our customers, fulfill contractual obligations, and otherwise run and track our business. For example, the transition has resulted in delays in processing customer claims for claims accruals. In addition, we may need to expend significant attention, time and resources to correct problems or find alternative sources for performing these functions. Any such difficulty or disruption may adversely affect our business and operating results.

We cannot ensure that our recently announced share repurchase program will be fully utilized or that it will enhance long-term shareholder value. Share repurchases may also increase the volatility of the trading price of our shares and diminish our cash reserves.

In March 2017, our Board of Directors authorized a three-year \$250 million repurchase program of our registered shares. This program does not obligate us to repurchase all or any of the dollar-value of shares authorized for repurchase. The program could also increase the volatility of the trading price of our shares, and any announcement of a termination or suspension of the program may result in a decrease in our share price. The program could also diminish our cash reserves that may be needed for investments in our business, acquisitions or other purposes.

Goodwill impairment charges could have an adverse effect on the results of our operations.

Goodwill associated with a number of previous acquisitions could result in impairment charges. The slowdown in the overall video conferencing industry together with the competitive environment in fiscal year 2013 resulted in a \$214.5 million non-cash goodwill impairment charge in fiscal year 2013, which substantially impacted results of discontinued operations. We recorded an additional impairment charge of goodwill of \$122.7 million related to our Lifesize video conferencing discontinued operations in fiscal year 2015, reducing its goodwill to zero, which substantially impacted results of discontinued operations again. If we divest or discontinue product categories or products that we previously acquired, or if the value of those parts of our business become impaired, we may need to evaluate the carrying value of our goodwill. Additional impairment charges could adversely affect our results of operations.

ITEM 2. UNREGISTERED SALES OF EQUITY SECURITIES AND USE OF PROCEEDS

Share Repurchases

In fiscal year 2018, the following approved share buyback programs were in place (in thousands):

Share Buyback Program	Shares	Approved Amounts
March 2014	17,311	\$250,000
March 2017	17,311	\$250,000

The following table presents certain information related to purchases made by Logitech of its equity securities under the March 2017 share buyback program above (in thousands, except per share amounts):

During the three months ended	Total Number of Shares Repurchased	Weighted Average Price Paid Per Share		Remaining Amount that May Yet Be Repurchased under the Program *
		CHF (LOGN)	USD (LOGI)	
Month 1				
September 30, 2017 to October 27, 2017	187	35.4	—	\$ 233,104
Month 2				
October 28, 2017 to November 24, 2017	—	—	—	233,104
Month 3				
November 25, 2017 to December 29, 2017	87	33.39	—	230,159
Total	274	34.76	—	\$ 230,159

* The March 2014 program expired in April 2017.
