Rule 13p-1 under the Securities Exchange Act (17 CFR 240.13p-1) for the reporting period from January 1 to December 31, 2017.

## Section 1 - Conflict Minerals Disclosure

### Item 1.01 Conflict Minerals Disclosure

#### Introduction

Gildan Activewear Inc. (“Gildan” or the “Company”) is submitting this special disclosure report on Form SD as required pursuant to Rule 13p-1 under the Securities Exchange Act of 1934 adopted by the U.S. Securities and Exchange Commission (the “SEC”) and known as the “conflict minerals rule” (the “Conflict Minerals Rule”). The Conflict Minerals Rule implements Section 1502 of the Dodd-Frank Wall Street Reform and Consumer Protection Act (the “Dodd-Frank Act”) which requires issuers of securities that are required to file annual and quarterly reports with the SEC to publicly disclose certain information regarding tantalite (coltan; i.e. tantalum), cassiterite (i.e. tin), wolframite (i.e. tungsten) and gold (the “3TGs”) necessary to the production or functionality of products that they manufacture or contract to manufacture.

This disclosure describes (a) the Company’s reasonable country of origin inquiry (the “RCOI”) for the year ended December 31, 2017 (the “2017 Reporting Period”) conducted to determine whether 3TGs in products that the Company manufactures or contracts to manufacture originated in the Democratic Republic of Congo or adjoining countries (collectively the “Covered Countries”), and (b) based on the results of the RCOI, the Company’s determination as to the origin of the 3TGs in products that the Company manufactures or contracts to manufacture.

#### Company Overview

Gildan is a leading manufacturer of everyday basic apparel which markets its products in North America, Europe, Asia-Pacific and Latin America, under a diversified portfolio of Company-owned brands, including Gildan®, American Apparel®, Comfort Colors®, Gildan® Hammer™, Gold Toe®, Anvil®, Alstyle®, Secret®, Silks®, Kushyfoot®, Secret Silky®, Therapy Plus™, Peds® and MediPeds®, and under the Under Armour® brand through a sock licensing agreement providing exclusive distribution rights in the United States and Canada. Our product offering includes activewear, underwear, socks, hosiery and legwear products sold to a broad range of customers, including wholesale distributors, screenprinters or embellishers, as well as to retailers that sell to consumers through their physical stores and/or e-commerce platforms. In addition, we sell directly to consumers through our own direct-to-consumer platforms.

Gildan owns and operates vertically-integrated, large-scale manufacturing facilities which are primarily located in Central America, the Caribbean Basin, North America, and Bangladesh. With over 50,000 employees worldwide Gildan operates with a strong commitment to industry-leading labour and environmental practices throughout its supply chain in accordance with its comprehensive Genuine Responsibility™ program embedded in the Company's long-term business strategy. More information about the Company and its corporate citizenship practices and initiatives can be found at [www.gildancorp.com](http://www.gildancorp.com) and [www.genuinegildan.com](http://www.genuinegildan.com), respectively.

Due to its position as a downstream manufacturer and distributor of finished products, Gildan does not directly source any minerals from mines, smelters or refiners. 3TGs included in Gildan’s products are in components acquired from suppliers, and Gildan is typically several steps removed from the origin of the ores.

#### Reasonable Country of Origin Inquiry

Gildan reviewed its entire range of products manufactured and sourced during the 2017 Reporting Period in order to identify all metallic components contained therein and necessary for the production or functionality of such products. Certain zippers (including pulls, stops and zipper rings), hooks, grommets, washers, buckles, sliders, adjusters, eyelets, snaps, flat cord metal tips and buttons all necessary for the functionality of their respective products (the “Metallic Components”) revealed small amounts (in all cases less than ten thousand (10,000) parts per million) of tin as well as trace amounts (in all cases less than seven hundred (700) parts per million) of tantalum, tungsten and/or gold.

Edgar Filing: Gildan Activewear Inc. - Form SD

The Metallic Components were supplied by fourteen (14) different suppliers (each a “Supplier” and collectively the “Suppliers”), and five (5) of the Suppliers confirmed that the tin and/or gold found in their Metallic Components were purposefully added during production to render the applicable components more flexible or for the purpose of creating a decorative (plated) finish. The trace amounts of 3TGs found in the Metallic Components supplied by the nine (9) other Suppliers are presumed to be mere contaminants.

As a result, Gildan's products subject to the Conflict Minerals Rule analysis and containing the purposefully added tin and/or gold are: (a) knit tops with zippers and draw cords made with metal molded tips, (b) caps that have metal top buttons, buckles, grommets, eyelets and washers (c) towels that have hooks and grommets, (d) bra straps with metal coated sliders and adjusters, (e) infant one pieces, and (f) jean tops and bottoms that have snaps, eyelets, washers and zippers (the "Products"). Gildan manufactures the knit tops in its own vertically-integrated facilities but sources the caps, towels, bra straps, jean tops and bottoms draw cords, and infant one pieces from third party suppliers. Gildan does not require from its suppliers that any Metallic Component used in its products contains 3TGs.

The RCOI was conducted by sending questionnaires to all fourteen (14) Suppliers procuring the Metallic Components for the Products or contracted to manufacture some of the Products containing the Metallic Components. These Suppliers account for less than 1% of Gildan's total suppliers of materials used in products that the Company manufactured or that the Company contracted to manufacture in 2017. Gildan requested that each Supplier complete the Conflict Free Sourcing's Initiative's (CFSI) Conflict Minerals Reporting Template, which was created by the Electronic Industry Citizenship Coalition and the Global e-Sustainability Initiative as a common means for the collection of sourcing information related to conflict minerals. This reporting template is a common data collection tool used across industries by companies with and without direct smelter relationships, and its questions are designed to generate necessary representations required to make determinations about the origin of the 3TGs.

All fourteen (14) Suppliers, even those whose products did not contain any purposefully added 3TGs, responded to the Company's inquiry by completing the Conflict Minerals Reporting Template and provided the Company with written assurances that none of the Products sold to Gildan during the 2017 Reporting Period contain 3TGs that have originated from the Covered Countries. Four (4) of the Suppliers who purposefully add 3TGs to the Metallic Components represented to conduct their own RCOI with their respective direct suppliers using the Conflict Free Sourcing's Initiative's (CFSI) Conflict Minerals Reporting Template or a substantially similar questionnaire. In addition, three (3) of the Suppliers who purposefully add 3TGs to the Metallic Components represented to have in place a conflict minerals sourcing policy. Finally, all five (5) Suppliers who purposefully add 3TGs to the Metallic Components identified the smelters believed to be involved in the smelting of such 3TGs. Such smelters are either listed as Conflict-Free Tin Smelters under the Conflict-Free Smelter Program list provided by the Conflict-Free Smelter Initiative, or located outside the Covered Countries.

The Company determined that it had no reason to believe that the Suppliers' representations generated in the Conflict Minerals Reporting Template and in the written certification provided to the Company were false or inaccurate, and based on such representations determined in good faith that it had no reason to believe that the 3TG contained in the Metallic Components used in the Products may have originated from the Covered Countries.

Gildan has posted this disclosure Form SD to its website at <http://www.genuinegildan.com/en/product/raw-material/>
