Filing of Preliminary Prospectus

The Company announced on November 24, 2005 that it has filed with the Securities Commissions and similar regulatory authorities in all provinces of Canada, a preliminary short form prospectus relating to the recently announced agreement with an underwriting syndicate co-led by Raymond James Ltd. and BMO Nesbitt Burns Inc., and including CIBC World Markets Inc. and Canaccord Capital Corporation under which the underwriters have agreed to purchase 6,250,000 Common Shares from AnorMED and sell to the public at a price of \$4.00 per Common Share, representing an aggregate issue amount of \$25,000,000. New Clinical Trial

The Company announced on November 29, 2005, the enrollment of HIV patients into its new clinical trial to evaluate the potential of AMD070 as a new anti-HIV drug.

The XACT (X4 Antagonist Concept Trial) trial is fully funded by AnorMED and is being conducted at two leading HIV research centers, one in the U.S. and one in the U.K. XACT is an open label dose finding study which may include up to 4 study cohorts of 12 patients each. Patients in the first cohort will receive 200 mg of AMD070, twice daily, for 10 consecutive days. The objective of the study is to determine the safety and antiviral activity of AMD070 in HIV-infected patients who harbor the CXCR4 using virus. Anti-viral activity is measured by a 1 log reduction in the CXCR4 using virus. Initial data from this study is expected in early 2006.

In order to enter and infect cells HIV must bind to either the CXCR4 or CCR5 receptor. Combining CXCR4 and CCR5 HIV entry inhibitors may become a new paradigm in the treatment of HIV. AnorMED's HIV Entry Inhibitor Program is focused on the discovery and development of drugs that target both receptors. AMD070 was developed in-house at AnorMED. It targets the CXCR4 receptor and can be administered in a pill. In addition to the XACT study, AMD070 is also being evaluated in a separate Phase Ib/IIa study being conducted by investigators at the U.S. Adult AIDS Clinical Trials Group (ACTG). AnorMED also has several compounds in preclinical studies that target the CCR5 receptor.
