Equity-Linked Partial Principal at Risk Securities Based on the Performance of the MSCI Europe Index, due March 3, 2021

Partial Principal at Risk Securities

The Equity-Linked Partial Principal at Risk Securities (the “securities”) are senior unsecured obligations of Royal Bank of Canada, do not pay interest, provide for a minimum return of only 95% of the principal at maturity, subject to our creditworthiness, and have the terms described in the accompanying prospectus supplement and prospectus, as supplemented or modified by this document. At maturity, if the level of the underlying index has increased, investors will receive the stated principal amount of their investment plus a return reflecting the leveraged upside performance of the underlying index. However, if the level of the underlying index has decreased, then investors will lose 1% for every 1% decline in the level of the underlying index, subject to the minimum payment amount. Under these circumstances, the payment at maturity will be less than the stated principal amount and could be as little as 95% of the principal amount. The securities are for investors who seek an equity index-based return and who are willing to risk a portion of their principal and forgo current income in exchange for the upside leverage feature. The securities are senior notes issued as part of Royal Bank of Canada’s Global Medium-Term Notes, Series H program. All payments on the securities are subject to the credit risk of Royal Bank of Canada.

SUMMARY TERMS

Issuer:	Royal Bank of Canada
Underlying index:	The MSCI Europe Index (Bloomberg symbol: “MXEU”)
Aggregate principal amount:	\$
Stated principal amount:	\$10 per security
Issue price:	\$10 per security
Pricing date:	February 13, 2019
Issue date:	February 19, 2019 (three business days after the pricing date)
Maturity date:	March 3, 2021, subject to adjustment as described in “Additional Information About the Securities” below.
Payment at maturity:	If the final index level is greater than the initial index level, $\$10 + \$10 \times \text{leverage factor} \times \text{underlying index return}$ If the final index level is less than or equal to the initial index level, $\$10 + \$10 \times \text{underlying index return}$ However, the payment at maturity will not be less than the minimum payment amount.
Minimum payment amount:	\$9.50 per security (95% of the stated principal amount)
Leverage factor:	116%
Underlying index return:	$(\text{final index level} - \text{initial index level}) / \text{initial index level}$
Initial index level:	, which is the closing level of the underlying index on the pricing date
Final index level:	The closing level of the underlying index on the valuation date
Valuation date:	February 26, 2021, subject to adjustment for non-trading days and certain market disruption events
CUSIP/ISIN:	78014H235 / US78014H2351

Edgar Filing: ROYAL BANK OF CANADA - Form FWP

Listing:	The securities will not be listed on any securities exchange.		
Agent:	RBC Capital Markets, LLC (“RBCCM”).		
Commissions and issue price:	Price to public	Agent’s commissions	Proceeds to issuer
Per security	\$10.00	\$0.20 ⁽¹⁾	
		\$0.05 ⁽²⁾	\$9.75
Total	\$	\$	\$

(1) RBCCM, acting as agent for Royal Bank of Canada, will receive a fee of \$0.25 per \$10 stated principal amount and will pay to Morgan Stanley Wealth Management (“MSWM”) a fixed sales commission of \$0.20 for each security that MSWM sells. See “Supplemental Information Regarding Plan of Distribution; Conflicts of Interest.”

(2) Of the amount per \$10 stated principal amount received by RBCCM, acting as agent for Royal Bank of Canada, RBCCM will pay MSWM a structuring fee of \$0.05 for each security.

The pricing date, the issue date and other dates set forth above are subject to change, and will be set forth in the pricing supplement relating to the securities. The initial estimated value of the securities as of the date of this document is \$9.6471 per \$10 security, which is less than the price to public. The pricing supplement relating to the securities will set forth our estimate of the initial value of the securities as of the pricing date, which will not be more than \$0.30 less than this amount. The market value of the securities at any time will reflect many factors, cannot be predicted with accuracy, and may be less than this amount.

An investment in the securities involves certain risks. See “Risk Factors” beginning on page 6 of this document, beginning on page S-1 of the accompanying prospectus supplement, and beginning on page 1 of the prospectus.

You should read this document together with the related prospectus supplement and prospectus each of which can be accessed via the hyperlinks below, before you decide to invest.

Please also see “Additional Terms of the Securities” in this document.

None of the Securities and Exchange Commission, any state securities commission or any other regulatory body has approved or disapproved of the securities or passed upon the adequacy or accuracy of this document. Any representation to the contrary is a criminal offense. The securities will not constitute deposits insured by the Canada Deposit Insurance Corporation, the U.S. Federal Deposit Insurance Corporation or any other Canadian or U.S. government agency or instrumentality. The securities are not subject to conversion into our common shares under subsection 39.2(2.3) of the Canada Deposit Insurance Corporation Act.

Equity-Linked Partial Principal at Risk Securities Based on the Performance of the MSCI Europe Index, due March 3, 2021

Partial Principal at Risk Securities

Investment Summary

Equity-Linked Partial Principal at Risk Securities

The Equity-Linked Partial Principal at Risk Securities Based on the Performance of the MSCI Europe Index, due March 3, 2021 (the “securities”) can be used:

§ As an alternative to direct exposure to the underlying index that enhances returns for positive performance of the underlying index.

§ To achieve similar levels of upside exposure to the underlying index as a direct investment, while using fewer dollars by taking advantage of the leverage factor.

§ To provide a minimum payment amount at maturity, subject to our creditworthiness.

The securities are exposed on a 1:1 basis to the negative performance of the underlying index, subject to the minimum payment amount. If the final index level is less than the initial index level, the payment at maturity will be less than the stated principal amount and could be as little as 95% of the stated principal amount.

Maturity: Approximately 2 years

Leverage factor: 116% (applicable only if the final index level is greater than the initial index level)

Maximum payment at maturity: None.

Minimum payment at maturity: 95% of the stated principal amount.

Coupon: None.

February 2019 Page 2

Equity-Linked Partial Principal at Risk Securities Based on the Performance of the MSCI Europe Index, due March 3, 2021

Partial Principal at Risk Securities

Key Investment Rationale

These securities offer leveraged positive exposure to the performance of the underlying index. In exchange for enhanced performance of 116% of the appreciation of the underlying index, investors are exposed to the negative performance of the underlying index, subject to the minimum payment amount. At maturity, if the level of the underlying index has increased, investors will receive the stated principal amount of their investment plus a return reflecting the leveraged upside performance of the underlying index. If the level of the underlying index remains unchanged, investors will receive the stated principal amount. However, if the level of the underlying index has decreased, investors will lose 1% for every 1% decline in the level of the underlying index over the term of the securities, subject to the minimum payment amount. Under these circumstances, the payment at maturity will be less than the stated principal amount and could be as little as 95% of the stated principal amount. Accordingly, you may lose up to 5% of your investment.

Leveraged
Upside
Performance

The securities offer investors an opportunity to capture enhanced returns relative to a direct investment in the underlying index.

Upside
Scenario

The level of the underlying index increases and, at maturity, we will pay the stated principal amount of \$10 plus 116% of the underlying index return.

Par Scenario

The final index level is equal to the initial index level. In this case, you receive the stated principal amount of \$10 at maturity.

Downside
Scenario

The level of the underlying index declines and, at maturity, we will pay less than the stated principal amount by an amount that is proportionate to the percentage decrease in the level of the underlying index from the initial index level, subject to the minimum payment amount. You may lose up to 5% of the stated principal amount.

Additional Information

You should read this document together with the prospectus dated September 7, 2018, as supplemented by the prospectus supplement dated September 7, 2018, relating to our Senior Global Medium-Term Notes, Series H, of which the securities are a part. This document, together with these documents, contains the terms of the securities and supersedes all other prior or contemporaneous oral statements as well as any other written materials, including preliminary or indicative pricing terms, correspondence, trade ideas, structures for implementation, sample structures, brochures or other educational materials of ours.

You should rely only on the information provided or incorporated by reference in this document, the prospectus and the prospectus supplement. We have not authorized anyone else to provide you with different information, and we take no responsibility for any other information that others may give you. We and Morgan Stanley Wealth Management are offering to sell the securities and seeking offers to buy the securities only in jurisdictions where it is lawful to do so. The information contained in this document and the accompanying prospectus supplement and prospectus is current only as of their respective dates.

If the information in this document differs from the information contained in the prospectus supplement or the prospectus, you should rely on the information in this document.

You should carefully consider, among other things, the matters set forth in “Risk Factors” in this document and the accompanying prospectus supplement, as the securities involve risks not associated with conventional debt securities. We urge you to consult your investment, legal, tax, accounting and other advisers before you invest in the securities. You may access these documents on the SEC website at www.sec.gov as follows (or if such address has changed, by reviewing our filings for the relevant date on the SEC website):

Prospectus dated September 7, 2018:

<https://www.sec.gov/Archives/edgar/data/1000275/000121465918005973/196181424b3.htm>

Prospectus Supplement dated September 7, 2018:

<https://www.sec.gov/Archives/edgar/data/1000275/000121465918005975/f97180424b3.htm>

Our Central Index Key, or CIK, on the SEC website is 1000275.

Please see the section “Documents Incorporated by Reference” on page i of the above prospectus for a description of our filings with the SEC that are incorporated by reference therein.

The issuer has filed a registration statement (including a prospectus) with the SEC for the offering to which this communication relates. Before you invest, you should read the prospectus in that registration statement and other documents the issuer has filed with the SEC for more complete information about the issuer and this offering. You may get these documents for free by visiting EDGAR on the SEC website at www.sec.gov. Alternatively, the issuer, any underwriter or any dealer participating in this offering will arrange to send you the prospectus if you request it by calling toll-free 1-877-688-2301.

Partial Principal at Risk Securities

How the Securities Work

Payoff Diagram

The payoff diagram below illustrates the payment at maturity on the securities for a range of hypothetical percentage changes in the closing level of the underlying index. The graph is based on the following terms:

- Stated principal amount: \$10 per security
- Leverage factor: 116%
- Maximum payment at maturity: None
- Minimum payment at maturity: 95% of the stated principal amount.

Securities Payoff Diagram

How it works

Upside Scenario. If the final index level is greater than the initial index level, then investors would receive the \$10 stated principal amount plus a return reflecting 116% of the appreciation of the underlying index over the term of the securities.

§ If the underlying index appreciates 10%, the investor would receive a 11.60% return, or \$11.16 per security, or 111.60% of the stated principal amount.

§ Par Scenario. If the final index level is equal to the initial index level, the investor would receive an amount equal to the \$10 stated principal amount.

Downside Scenario. If the final index level is less than the initial index level, the investor would receive an amount that is less than the \$10 stated principal amount, based on a 1% loss of principal for each 1% decline in the underlying index, subject to the minimum payment amount. Under these circumstances, the payment at maturity will be less than the stated principal amount per security. The minimum payment at maturity on the securities is 95% of the stated principal amount.

§ If the underlying index depreciates 3%, the investor would lose 3% of the investor's principal and receive only \$9.70 per security at maturity, or 97% of the stated principal amount.

§ If the underlying index depreciates 30%, the investor would lose 5% of the investor's principal and receive only \$9.50 per security at maturity, or 95% of the stated principal amount.

Equity-Linked Partial Principal at Risk Securities Based on the Performance of the MSCI Europe Index, due March 3, 2021

Partial Principal at Risk Securities

Risk Factors

An investment in the securities is subject to the risks described below, as well as the risks described under “Risk Factors” in the accompanying prospectus supplement and prospectus. Investors in the securities are also exposed to further risks related to the issuer of the securities, Royal Bank of Canada, which are described in Royal Bank of Canada’s annual report on Form 40-F for its most recently completed fiscal year, filed with the SEC and incorporated by reference herein. See the categories of risks, identified and disclosed in the management’s discussion and analysis of financial condition and results of operations included in the annual report on Form 40-F. This section (and the management’s discussion and analysis section of the annual report on Form 40-F) describes the most significant risks relating to the securities. You should carefully consider whether the securities are suited to your particular circumstances.

The securities do not pay interest or guarantee full return of principal. The terms of the securities differ from those of ordinary debt securities in that the securities do not pay interest or guarantee full payment of the stated principal amount at maturity. If the final index level is less than the initial index level, the payout at maturity will be an amount in cash that is less than the \$10 stated principal amount of each security by an amount proportionate to the decrease in the level of the underlying index over the term of the securities, subject to the minimum payment amount. The minimum payment at maturity on the securities is 95%, and accordingly, you could lose up to 5% of your initial investment in the securities.

The market price of the securities will be influenced by many unpredictable factors. Many factors will influence the value of the securities in the secondary market and the price at which RBCCM may be willing to purchase or sell the securities in the secondary market, including:

§ the trading price and volatility (frequency and magnitude of changes in value) of the securities represented by the underlying index;

§ dividend yields on the securities represented by the underlying index;

§ market interest rates;

§ our creditworthiness, as represented by our credit ratings or as otherwise perceived in the market;

§ time remaining to maturity;

§ geopolitical conditions and economic, financial, political, regulatory or judicial events that affect the underlying index; and

§ the exchange rates between the U.S. dollar and the euro.

The level of the underlying index may be volatile, and you should not take the historical levels of the underlying index as an indication of future performance. See “Information About the Underlying Index” below. You may receive less, and possibly significantly less than, the stated principal amount per security if you sell your securities prior to maturity.

The securities are subject to the credit risk of Royal Bank of Canada, and any actual or anticipated changes to its credit ratings or credit spreads may adversely affect the market value of the securities. You are dependent on Royal Bank of Canada’s ability to pay all amounts due on the securities at maturity and therefore you are subject to the credit risk of Royal Bank of Canada. If Royal Bank of Canada defaults on its obligations under the securities, your investment would be at risk and you could lose some or all of your investment. As a result, the market value of the securities prior to maturity will be affected by changes in the market’s view of Royal Bank of Canada’s creditworthiness. Any actual or anticipated decline in Royal Bank of Canada’s credit ratings or increase in the credit spreads charged by the market for taking Royal Bank of Canada credit risk is likely to adversely affect the market value of the securities.

§ The amount payable on the securities is not linked to the level of the underlying index at any time other than the valuation date. The final index level will be based on the closing level of the underlying index on the valuation date, subject to adjustment for non-trading days and certain market disruption events. Even if the level of the underlying

index appreciates prior to the valuation date but then decreases on the valuation date to a level that is less than the initial index level, the payment at maturity will be less, and may be significantly less, than it would have been had the payment at maturity been linked to the level of the underlying index prior to that decrease. Although the actual level of the underlying index on the maturity date or at other times during the term of the securities may be higher than the final index level, the payment at maturity will be based solely on the closing level of the underlying index on the valuation date.

Investing in the securities is not equivalent to investing in the underlying index. Investing in the securities is not equivalent to investing in the underlying index or its component stocks. Investors in the securities will not have § voting rights or rights to receive dividends or other distributions or any other rights with respect to stocks that constitute the underlying index.

The initial estimated value of the securities will be less than the price to the public. The initial estimated value that is set forth on the cover page of this document, and that will be set forth in the pricing supplement for the securities, does not represent a minimum price at which we, RBCCM or any of our affiliates would be willing to purchase the securities in any secondary market (if any exists) at any time. If you attempt to sell the securities prior to maturity, their market value may be lower than the price you paid for them and the initial estimated value. This is due to, § among other things, changes in the level of the underlying index, the borrowing rate we pay to issue securities of this kind, and the inclusion in the price to the public of the agent's commissions and the estimated costs relating to our hedging of the securities. These factors, together with various credit, market and economic factors over the term of the securities, are expected to reduce the price at which you may be able to sell the securities in any secondary market and will affect the value of the securities in complex and unpredictable ways. Assuming no change in market conditions or any other relevant factors, the price, if any, at which you may be able to sell your securities prior to maturity may be less than your

Equity-Linked Partial Principal at Risk Securities Based on the Performance of the MSCI Europe Index, due March 3, 2021

Partial Principal at Risk Securities

original purchase price, as any such sale price would not be expected to include the agent's commissions and the hedging costs relating to the securities. In addition to bid-ask spreads, the value of the securities determined for any secondary market price is expected to be based on the secondary rate rather than the internal funding rate used to price the securities and determine the initial estimated value. As a result, the secondary price will be less than if the internal funding rate was used. The securities are not designed to be short-term trading instruments. Accordingly, you should be able and willing to hold your securities to maturity.

Our initial estimated value of the securities is an estimate only, calculated as of the time the terms of the securities are set. The initial estimated value of the securities is based on the value of our obligation to make the payments on the securities, together with the mid-market value of the derivative embedded in the terms of the securities. See § "Structuring the Securities" below. Our estimate is based on a variety of assumptions, including our credit spreads, expectations as to dividends, interest rates and volatility, and the expected term of the securities. These assumptions are based on certain forecasts about future events, which may prove to be incorrect. Other entities may value the securities or similar securities at a price that is significantly different than we do.

The value of the securities at any time after the pricing date will vary based on many factors, including changes in market conditions, and cannot be predicted with accuracy. As a result, the actual value you would receive if you sold the securities in any secondary market, if any, should be expected to differ materially from the initial estimated value of your securities.

An investment in the securities is subject to risks relating to non-U.S. securities markets. Because foreign companies or foreign equity securities included in the underlying index are publicly traded in the applicable foreign countries and are denominated in currencies other than U.S. dollars, an investment in the securities involves particular risks. For example, the non-U.S. securities markets may be more volatile than the U.S. securities markets, and market developments may affect these markets differently from the U.S. or other securities markets. Direct or indirect § government intervention to stabilize the securities markets outside the U.S., as well as cross-shareholdings in certain companies, may affect trading prices and trading volumes in those markets. Also, the public availability of information concerning the foreign issuers may vary depending on their home jurisdiction and the reporting requirements imposed by their respective regulators. In addition, the foreign issuers may be subject to accounting, auditing and financial reporting standards and requirements that differ from those applicable to U.S. reporting companies.

The securities included in the underlying index are issued by companies located within the Eurozone, which is and has been undergoing severe financial stress, and the political, legal and regulatory ramifications are impossible to predict. Changes within the Eurozone could have a material adverse effect on the performance of the underlying index and, consequently, on the value of the securities.

The securities are subject to foreign currency exchange rate risk. The payment amount on the securities will be calculated based on the underlying index, and the prices of the stocks represented by the underlying index are converted into U.S. dollars for purposes of calculating its level. As a result, investors in the securities will be § exposed to currency exchange rate risk with respect to each of the currencies represented by the underlying index.

An investor's net exposure will depend on the extent to which the currencies represented by the underlying index strengthen or weaken against the U.S. dollar and the relative weight of each relevant currency represented by the underlying index. If, taking into account such weight, the dollar strengthens against such currencies, the level of the underlying index will be adversely affected and the amount payable at maturity of the securities may be reduced. Adjustments to the underlying index could adversely affect the value of the securities. The sponsor of the underlying § index (the "index sponsor") may add, delete or substitute the stocks constituting the underlying index, or make other methodological changes. Further, the index sponsor may discontinue or suspend calculation or publication of the underlying index at any time. Any of these actions could affect the value of and the return on the securities.

§

We have no affiliation with the index sponsor and will not be responsible for any actions taken by the index sponsor. The index sponsor is not an affiliate of ours and will not be involved in the offering of the securities in any way. Consequently, we have no control over the actions of the index sponsor, including any actions of the type that would require the calculation agent to adjust the payment to you at maturity. The index sponsor has no obligation of any sort with respect to the securities. Thus, the index sponsor has no obligation to take your interests into consideration for any reason, including in taking any actions that might affect the value of the securities. None of our proceeds from the issuance of the securities will be delivered to the index sponsor.

§ The securities will not be listed on any securities exchange and secondary trading may be limited. The securities will not be listed on any securities exchange. Therefore, there may be little or no secondary market for the securities. RBCCM may, but is not obligated to, make a market in the securities, and, if it chooses to do so at any time, it may cease doing so. When it does make a market, it will generally do so for transactions of routine secondary market size at prices based on its estimated of the current value of the securities, taking into account its bid/offer spread, our credit spreads, market volatility, the notional size of the proposed sale, the cost of unwinding any related hedging positions, the time remaining to maturity and the likelihood that it will be able to resell the securities. Even if there is a secondary market, it may not provide enough liquidity to allow you to trade or sell the securities easily. Because we do not expect that other broker-dealers will participate significantly in the secondary market for the securities, the price at which you may be able to trade your securities is likely to depend on the price, if any, at which RBCCM is willing to transact. If, at any time, RBCCM were not to make a market in the securities, it is likely that there would be no secondary market for the securities. Accordingly, you should be willing to hold your securities to maturity.

Equity-Linked Partial Principal at Risk Securities Based on the Performance of the MSCI Europe Index, due March 3, 2021

Partial Principal at Risk Securities

Historical levels of the underlying index should not be taken as an indication of its future levels during the term of the securities. The trading prices of the equity securities comprising the underlying index will determine the level of § the underlying index at any given time. As a result, it is impossible to predict whether the level of the underlying index will rise or fall. Trading prices of the equity securities comprising the underlying index will be influenced by complex and interrelated political, economic, financial and other factors.

Hedging and trading activity by us and our subsidiaries could potentially adversely affect the value of the securities. One or more of our subsidiaries and/or third party dealers expect to carry out hedging activities related to the securities (and possibly to other instruments linked to the underlying index or the securities it represents), including trading in those securities as well as in other related instruments. Some of our subsidiaries also may conduct trading activities relating to the underlying index on a regular basis as part of their general broker-dealer and other § businesses. Any of these hedging or trading activities on or prior to the pricing date could potentially affect the initial index level and, therefore, could increase the level at which the underlying index must close on the valuation date so that investors do not suffer a loss on their initial investment in the securities. Additionally, such hedging or trading activities during the term of the securities, including on the valuation date, could adversely affect the closing level of the underlying index on the valuation date and, accordingly, the amount of cash an investor will receive at maturity.

Our business activities may create conflicts of interest. We and our affiliates may engage in trading activities related to the underlying index or the securities represented by the underlying index that are not for the account of holders of § the securities or on their behalf. These trading activities may present a conflict between the holders' interest in the securities and the interests we and our affiliates will have in proprietary accounts, in facilitating transactions, including options and other derivatives transactions, for our customers and in accounts under our management.

These trading activities could be adverse to the interests of the holders of the securities.

We and our affiliates may presently or from time to time engage in business with one or more of the issuers of the securities represented by the underlying index. This business may include extending loans to, or making equity investments in, such companies or providing advisory services to such companies, including merger and acquisition advisory services. In the course of business, we and our affiliates may acquire non-public information relating to these companies, which we have no obligation to disclose to you, and, in addition, one or more of our affiliates may publish research reports about these companies. Neither we nor the agent have made any independent investigation regarding any matters whatsoever relating to the issuers of the securities represented by the underlying index. Moreover, we and our affiliates may have published, and in the future expect to publish, research reports with respect to the underlying index or the securities which it represents. This research is modified from time to time without notice and may express opinions or provide recommendations that are inconsistent with purchasing or holding the securities. Any of these activities by us or one or more of our affiliates may affect the level of the underlying index and, therefore, the market value of the securities.

The calculation agent, which is a subsidiary of the issuer, will make determinations with respect to the securities, which may create a conflict of interest. Our wholly owned subsidiary, RBCCM, will serve as the calculation agent. As calculation agent, RBCCM will determine the initial index level, the final index level and the underlying index return and calculate the amount of cash you will receive at maturity. Moreover, certain determinations made by § RBCCM, in its capacity as calculation agent, may require it to exercise discretion and make subjective judgments, such as with respect to the occurrence or non-occurrence of market disruption events and the selection of a successor index or the calculation of the final index level in the event of a market disruption event or discontinuance of the underlying index. These potentially subjective determinations may adversely affect the payout to you at maturity.

For further information regarding these types of determinations see "Additional Terms of the Securities" below. § You will be required to include income on the securities over their term based upon a comparable yield, even though you will not receive any payments until maturity. The securities are considered to be issued with original issue

discount. You will be required to include income on the securities over their term based upon a comparable yield, even though you will not receive any payments until maturity. You are urged to review the section entitled “Supplemental Discussion of U.S. Federal Income Tax Consequences” and consult your own tax advisor.

Equity-Linked Partial Principal at Risk Securities Based on the Performance of the MSCI Europe Index, due March 3, 2021

Partial Principal at Risk Securities

Additional Terms of the Securities

Please read this information in conjunction with the summary terms on the front cover of this document.

Additional Provisions

If the valuation date occurs on a day that is not a trading day or on a day on which the calculation agent has determined that a market disruption event (as defined below) has occurred or is continuing, then the valuation date will be postponed until the next succeeding trading day on which the calculation agent determines that a market disruption event does not occur or is not continuing; provided that in no event will the valuation date be postponed by more than five trading days. If the valuation date is postponed by five trading days, and a market disruption event occurs or is continuing on that fifth trading day, then the calculation agent may determine, in its good faith and reasonable judgment, what the closing level of the underlying index would have been in the absence of the market disruption event. If the valuation date is postponed, then the maturity date will be postponed by an equal number of business days. No interest shall accrue or be payable as a result of such postponement.

With respect to the underlying index and any relevant successor index, a “market disruption event” means:

§ a suspension, absence or material limitation of trading of equity securities then constituting 20% or more of the level of the underlying index (or the relevant successor index) on the relevant exchanges (as defined below) for such securities for more than two hours of trading during, or during the one hour period preceding the close of, the principal trading session on such relevant exchange; or

§ a breakdown or failure in the price and trade reporting systems of any relevant exchange as a result of which the reported trading prices for equity securities then constituting 20% or more of the level of the underlying index (or the relevant successor index) during the one hour preceding the close of the principal trading session on such relevant exchange are materially inaccurate; or

§ a suspension, absence or material limitation of trading on the primary exchange or market for trading in futures or options contracts related to the underlying index (or the relevant successor index) for more than two hours of trading during, or during the one hour period preceding the close of, the principal trading session on such exchange or market; or

§ a decision to permanently discontinue trading in the relevant futures or options contracts; in each case as determined by the calculation agent in its sole discretion; and

§ a determination by the calculation agent in its sole discretion that the event described above materially interfered with our ability or the ability of any of our affiliates to adjust or unwind all or a material portion of any hedge with respect to the securities.

For purposes of determining whether a market disruption event with respect to the underlying index (or the relevant successor index) exists at any time, if trading in a security included in the underlying index (or the relevant successor index) is materially suspended or materially limited at that time, then the relevant percentage contribution of that security to the level of the underlying index (or the relevant successor index) will be based on a comparison of (a) the portion of the level of the underlying index (or the relevant successor index) attributable to that security relative to (b) the overall level of the underlying index (or the relevant successor index), in each case immediately before that suspension or limitation.

For purposes of determining whether a market disruption event with respect to the underlying index (or the relevant successor index) has occurred:

§ a limitation on the hours or number of days of trading will not constitute a market disruption event if it results from an announced change in the regular business hours of the relevant exchange, or the primary exchange or market for trading in futures or options contracts related to the underlying index

(or the relevant successor index);

§ limitations pursuant to the rules of any relevant exchange similar to NYSE Rule 80B (or any applicable rule or regulation enacted or promulgated by any other self-regulatory organization or any government agency of scope similar to NYSE Rule 80B as determined by the calculation agent) on trading during significant market fluctuations will constitute a

Equity-Linked Partial Principal at Risk Securities Based on the Performance of the MSCI Europe Index, due March 3, 2021

Partial Principal at Risk Securities

suspension, absence or material limitation of trading;
