The following materials are included.

1. Interim report for the 103rd business term
-

To Our Shareholders

It is a great pleasure to present our interim report for the first half of the 103rd business term, from January 1, 2003, through June 30, 2003.

Looking back at domestic and overseas economies during this half-term, the U.S. economy continued a basic tone of sluggish growth in both personal consumption and investments in plants and equipment, but began exhibiting slight signs of recovery during the latter quarter. Due to restraint in export growth under the influence of the U.S. economy, the growth rates of European economies remained nearly level. Moreover, due to the adverse influence of SARS (Severe Acute Respiratory Syndrome) and other factors, Asian economies achieved only moderate growth. On the other hand, harsh conditions prevailed in the Japanese economy, which showed no signs of a favorable shift in personal consumption or investments in plants and equipment. In the foreign exchange market, in comparison with the same period of the previous year, the yen appreciated versus the U. S. dollar and depreciated versus Euro currency.

In markets relevant to Canon, the demand for digital cameras continued to expand, but severe market conditions for digital copying machines and computer peripherals continued as price wars intensified. Regarding optical products, although the market for semiconductor production equipment remained stagnant, the market for mirror projection mask aligners for LCD panels expanded because of an increasing demand for LCD televisions and other factors.

Within this management environment, Canon entered the third year of Phase II (2001 to 2005) of the Excellent Global Corporation Plan. Based on this plan, Canon continued to work toward reforming both production and development activities. For production reforms, Canon further advanced rationalization by such means as automating production and adopting mini-FA systems, thereby successfully achieving a further reduction in product cost. Moreover, as a consequence of development reforms, Canon was

Edgar Filing: CANON INC - Form 6-K

able to release competitive products in a timely manner. In terms of sales activities as well, our business activities were able to accurately reflect market needs by reorganizing the Canon group and reinforcing closer communication among all member companies within the Canon group.

Due to these efforts, despite a sluggish global economy we consecutively sustained a favorable performance during this first half of the 103rd business term. In comparison with the same period of the previous year, total sales amounted to 946.6 billion yen (a 17.1% increase) and ordinary profit totaled 164.3 billion yen (a 75.3% increase). Partially due to the gain on exemption from the substitutional portion of the employees' pension fund (45.9 billion yen), net income was 128.8 billion yen (a 120.2% increase).

The interim dividend for the first half of the 103rd business term amounts to 15 yen per share, representing a 2.50-yen increase versus that of the same period last year. Payment of dividends to shareholders commences on August 28, 2003.

Regarding the outlook for the second half of the 103rd business term, the forecast of the global economy remains unpredictable although it will probably achieve a basic tone of moderate recovery, and the management environment of Canon is expected to remain in severe conditions. Under such circumstances, we intend to further strengthen our resolve and push forward extensive operational reforms in development, production, and sales, with the aim of increasing profitability and stabilizing performance.

We hope that you will continue to extend even greater support and encouragement in the months ahead.

August 2003

FUJIO MITARAI
President & C.E.O.

BUSINESS REPORT BY OPERATIONS

The products mentioned below may have different names in other areas.

Sales by Operations

Operations	Sales	Increase/Decrease against the Same Period of the Previous Term
	100 millions of yen	%
Business Machines	6,842	9.5
Office Imaging Products	2,358	3.0
Computer Peripherals	4,484	13.2
Cameras	2,083	41.9
Optical and Other Products	541	48.3
Total	9,466	17.1

Notes:

1. From this interim period, amounts of less than 100 million are rounded off.
2. From this interim period, representation of segmentation by product categories within the **Business Machines** are changed from the previous three segments of **Copying Machines**, **Computer Peripherals** and **Business Systems** to the two segments of **Office Imaging Products** and **Computer Peripherals**. In this connection, sales figures for the previous periods have been re-classified in accordance with the new segmentation.

Constitution of Sales

100 MILLIONS OF YEN

Sales by Operations

Sales by Region

Business Machines Operations

Office Imaging Products

Fierce competition continued both in Japan and overseas within the markets for digital copying machines and multifunctional machines. As for monochrome digital copying machines for office use, sales of the imageRUNNER Series sustained a steady performance and, although sales of intermediate-speed models was sluggish, the sales quantity of the low-speed iR1600 Series models rose substantially. The high-speed models, as exemplified by the iR105, earned favorable acclaim, especially in the U.S. market. Furthermore, we strove to further expand the product lineup by releasing the iR3350i Series of new-generation multifunctional machines that offer the expandability of enhanced functions and diverse solutions when optional application software is installed.

As for color digital copying machines, the iR C3200 and iR C3200N network-compatible multifunctional machines for office use equipped with Canon's original, innovative iR controller earned high acclaim in domestic and overseas markets and contributed to increased sales. Moreover, we also focused efforts on promoting the sales of the new CLC1110 and other PIXEL Series color copying machines, which target graphic design businesses and design businesses.

The market for products aimed for use at home or at small

Change in sales 100 MILLIONS OF YEN

businesses, on the other hand, showed an increasing trend in the demand for digital multifunctional machines that possess the functions of a printer and facsimile machine as well as a copying machine. The PC1255 and PC1275 multifunctional laser printers sustained steady sales, and the new Satera D350 and Satera D300 also earned wide acclaim. While the shift toward multifunctional machines thus accelerated, we also endeavored to promote the sales of single-function copying machines in the PC Series and FC Series as well as single-function facsimile machines, such as the newly released L500 laser facsimile machine.

As a result, sales in this category increased 3.0% versus the same period last year.

Computer Peripherals

The overall market for computer peripherals continued to face a harsh environment due to sluggish consumption caused by the economic slowdown in Japan and overseas, the intensification of price wars, and other factors. Amidst such circumstances, in the market for laser beam printers, we greatly increased our sales versus the same period last year due to the release of the color Satera LBP-2410 in Japan and abroad and our efforts to expand its sales, a recovery in the sales of OEM-oriented products, and so forth.

In the market for inkjet printers, on the other hand, the PIXUS Series posted favorable performance, with continued growth in the sales quantity of both the PIXUS 550i and PIXUS 850i. We also worked to enhance the product portfolio by releasing new products, including the super-compact, lightweight PIXUS 50i notebook-printer as well as the PIXUS 470PD Photo Direct model that can directly print photographs taken with a digital camera. In response to the rising domestic and overseas demand in the inkjet printer market for multifunctional machines equipped with the functions of a color printer, color copying machine, scanner, and facsimile, we released and posted favorable sales of the PIXUS MP730 and PIXUS MP700 inkjet multifunctional machines that achieve both versatile functions and high-speed printing.

Whereas the demand for multifunctional machines rose, however, the sales of single-function inkjet facsimile machines was restrained. Despite the adverse influence of a shrinking market on the sales performance of our single-function scanners, we channeled efforts into expanding the sales of CanoScan 9900F our new flagship of ultra-photorealistic scanners that takes advantage of Canon's optical technology and of the CanoScan LiDE30 and other models in the LiDE Series.

As a result of these efforts, sales in this category increased 13.2% versus the same period last year.

Change in sales
100 MILLIONS OF YEN

Camera Operations

Within the high growth in the domestic and overseas demand for digital cameras that has also continued into this half-term, we released five new models in the PowerShot Series and two new models in the IXY DIGITAL Series into the market for compact digital cameras, all of which earned high acclaim for their easy operation and high image quality thanks to the adoption of the DIGIC imaging engine and other innovations. Consequently, our sales growth in the market for the compact digital cameras exceeded that of the overall market.

Regarding digital cameras of the single-lens reflex type, we released the EOS 10D which offers an affordable price while upholding high performance and subsequently generated a trend toward full-fledged digitalization among high-end amateur photographers as well. As for silver-halide cameras, we released the medium-grade Autoboy N115 and other models then strove to increase their sales, but sales declined due to a shrinking demand. Sales of EF exchangeable lenses steadily increased on the basis of their compatibility with single-lens reflex cameras of both digital and silver-halide types. In the market for digital video cameras, we worked to strengthen the product lineup by releasing three new models, including the FV M10 KIT in the Torebian Series, and successfully continued to expand sales.

Consequently, sales in this category increased 41.9% versus the same period last year.

Change in sales
100 MILLIONS OF YEN

Optical and Other Products Operations

While semiconductor manufacturers continued to curb new investments in view of the slump in the semiconductor market, we initiated shipments of the FPA-5000ES4 high-resolution Krf scanning stepper and other models and mainly increased sales of equipment for the increased production of CCDs (Charge-Coupled Devices) for Japanese consumption. Compared to the same period last year when the sales of semiconductor production equipment was sluggish, therefore, sales rose during the current half-term.

Regarding mirror projection mask aligners for LCD panels, on the other hand, thanks to the shift to LCD panels as display monitors for personal computers and the expanded market for LCD televisions, mirror projection mask aligners capable of handling large-format LCD panels enjoyed a lively demand and the sales of MPA-7500 continued to rise favorably. In addition, the newly released MPA-7800, which is capable of handling even larger panels (1,200 x 1,300 mm), exhibited steady sales after entering the market.

Despite a slump in the market for broadcasting equipment, we sustained steady performance by such efforts as the release of the DIGISUPER 100 xs, a broadcasting lens that achieves a zoom rate of 100x and which won high praise for its vivid and powerful images during live sports broadcasts. Moreover, in the market for medical equipment, we endeavored to increase the sales of our digital non-mydratric retinal cameras and X-ray digital cameras.

As a result, sales in this category increased 48.3% versus the same period last year.
