eMAGIN CORPORATION
Selected Notes to Consolidated Financial Statements

NOTE 1 - BASIS OF PRESENTATION

The consolidated financial statements have been prepared in conformity with generally accepted accounting principles. Certain information or footnote disclosures normally included in financial statements prepared in accordance with generally accepted accounting principles have been condensed or omitted pursuant to the rules and regulations of the Securities and Exchange Commission. In the opinion of management, the statements include all adjustments necessary (which are of a normal and recurring nature) for the fair presentation of the results of the interim periods presented. The results of operations for the period ended June 30, 2002 are not necessarily indicative of the results to be expected for the full year.

NOTE 2 - RESTATEMENT

As a result of a subsequent review of the June 30, 2002 quarterly financial statements by our independent auditor we noted the following material restatements occurred:

Financial Statement Line	Original	Restated	Comment
Unbilled Costs	\$ 101,320	\$ 24,020	Reclassification of am
Inventory	65,600	445,607	To correct inventory v

Selling, General & Administrative	23,049,885	21,298,498	compensation amortizat
-----			expenses to research a
Inception to date			Amortization of Origin
Other (expense) income	(2,091,944)	(2,412,881)	debt.

6

The following table illustrates the above material restatements impact on the three and six months ended June 30, 2002 respectively:

Financial Statement Line	Three months ended June 30, 2002	Three Months ended June 30, 2002 Restated	Six mo June 30
Research and Development	\$1,569,534	\$3,122,082	\$3,7
Selling General & Administrative	2,100,860	379,473	\$5,0
Other (expense) income	(115,230)	(436,167)	(1,0
Net Loss	\$ (3,584,880)	\$ (4,001,044)	\$ (10,0
Loss per share	\$ (0.12)	\$ (0.13)	\$

The company's management and its independent accountants recommended the above adjustments after analysis of the accounts. Management believes it has taken the necessary steps to analyze its accounts on a timely basis and in a manner as recommended by our new independent accountants in the future. In addition the footnotes to the June 30, 2002 financial statements and the Management's Discussion and Analysis have been updated to conform to the results presented in the amended June 30, 2002 quarterly financial statements.

NOTE 3 - NATURE OF BUSINESS

Fashion Dynamics Corporation (FDC) was organized January 23, 1996, under the laws of the State of Nevada. FDC had no active business operations other than to acquire an interest in a business. On March 16, 2000, FDC acquired FED Corporation ("FED") (the Merger). The merged company changed its name to eMagin Corporation (the "Company" or eMagin) (Note 3). FED is a developer and manufacturer of optical systems and microdisplays for use in the electronics industry. FED's wholly-owned subsidiary, Virtual Vision Inc., develops and markets microdisplay systems and optics technology for commercial, industrial and military applications. Following the Merger, the business conducted by the Company is the business conducted by FED prior to the Merger.

The Company continues to be a development stage company, as defined by Statement of Financial Accounting Standards ("SFAS") No. 7, Accounting and Reporting by

Edgar Filing: EMAGIN CORP - Form 10-Q/A

Development Stage Enterprises", as it continues to devote substantially all of its efforts to establishing a new business, and it has not yet commenced its planned principal operations. Revenues earned by the Company to date are primarily related to research and development type contracts and are not related to the Company's planned principal operations of commercialization of products using organic light emitting diode (OLED) technology.

Through June 30, 2002, the company had incurred development stage losses totaling approximately \$127.2 million. Prior to the acquisition of FED by FDC, FED incurred developmental stage losses totaling approximately \$52.5 million. At June 30, 2002, the Company had approximately \$0.3 million of cash, cash equivalents and contract receivables to fund short-term working capital requirements and approximately \$9.3 million of working capital deficiency. The Company's ability to continue as a going concern and its future success is dependent upon its ability to raise capital in the near future to continue: (1) its research and development efforts, (2) hiring and retaining key employees, (3) satisfaction of its commitments and (4) marketing and production of its products.

7

The Company believes that it will be able to secure financing in the near term and that the proceeds from such financings, along with financings closed subsequent to June 30, 2002 and its remaining cash resources at June 30, 2002, will be sufficient to fund the Company's operations into the first quarter of 2003 and beyond. However, there can be no assurance that sufficient capital will be available, when required, to permit the Company to realize its plan, or even if such capital is available, that it will be at terms favorable to the Company. Additionally, there can be no assurance that the Company's efforts to produce a commercially viable product will be successful, or that the Company will generate sufficient revenues to provide positive cash flows from operations. These and other factors raise substantial doubt about the Company's ability to continue as a going concern. The accompanying consolidated financial statements do not include any adjustments that might result should the Company be unable to continue in existence. (Also see Liquidity and Capital Resources section on Item 7 Management's Discussion and Analysis of Financial Conditions and Results of Operation and Risks Related to Our Financial Results section of Item 7A Qualitative and Quantitative Disclosures About Market Risk.)

NOTE 3 - FED ACQUISITION

On March 16, 2000 FDC acquired all of the outstanding stock of FED. Under the terms of the agreement, FDC issued approximately 10.5 million shares of its common stock and approximately 3.9 million options and warrants to purchase common stock to FED shareholders. The total preliminary purchase price of the transaction was approximately \$98.5 million, including \$73.4 million of value relating to the shares issued (at a fair value of \$7 per share, the value of the simultaneous private placement transaction of similar securities), \$20.9 million of value relating to the options and warrants exchanged, \$0.3 million of acquisition costs and \$3.8 million of assumed liabilities. The transaction was accounted for using the purchase method of accounting. Under the purchase method of accounting, the assets and liabilities were recorded based upon their fair values at the date of acquisition.

NOTE 4 - REVENUE AND COST RECOGNITION

The Company has historically earned revenues from certain of its research and development activities under both firm fixed-price contracts and cost-type contracts, including some cost-plus-fee contracts. Revenues relating to firm fixed-price contracts are generally recognized on the percentage-of-completion method of accounting as costs are incurred (cost-to-cost basis). Revenues on

Edgar Filing: EMAGIN CORP - Form 10-Q/A

cost-plus-fee contracts include costs incurred plus a portion of estimated fees or profits based on the relationship of costs incurred to total estimated costs. Contract costs include all direct material and labor costs and an allocation of allowable indirect costs as defined by each contract, as periodically adjusted to reflect revised agreed upon rates. These rates are subject to audit by the other party. Amounts can be billed on a bi-monthly basis. Billing is based on subjective cost investment factors.

In addition, the Company has product sales which are recognized when merchandise is shipped and such revenue is recorded net of estimated sales returns, discounts and allowances.

NOTE 5 - RESEARCH AND DEVELOPMENT COSTS

Research and development costs are expensed as incurred. To date, activities of the Company (and its predecessor) have included the performance of research and development under cooperative agreements with United States Government agencies. Funding from such research and development contracts is recognized as a reduction in operating expenses during the period in which the services are performed and related direct expenses are incurred.

8

NOTE 6 - NET LOSS PER COMMON SHARE

In accordance with SFAS No. 128, net loss per common share amounts ("basic EPS") were computed by dividing net loss by the weighted average number of common shares outstanding and excluding any potential dilution. Net loss per common share assuming dilution ("diluted EPS") was computed by reflecting potential dilution from the exercise of stock options and warrants. Common equivalent shares totaling 11,767,740 have been excluded from the computation of diluted EPS for the three and six month period ending June 30, 2002.

NOTE 7 - DEBT

On January 14, 2002, the Company entered into a \$1.0 million bridge loan arrangement with a private investor (the "Investor") in connection with a secured note purchase agreement executed by the Company on November 27, 2001. This transaction increased the total amount of the secured convertible loan outstanding under this arrangement to \$1,625,000, including amounts previously made available to the Company in connection with the November 27, 2001 secured note arrangement, net of repayments of \$250,000 to certain investors who elected not to reinvest. The secured convertible notes accrue interest at a rate of 9.00% per annum and mature on August 30, 2002. Terms of the notes also include a fixed conversion rate of \$0.5264 per share. The Company also granted warrants purchasing 921,161 shares of common stock with an exercise price of \$0.5468 per share to the Investor. Such warrants are exercisable through January 2005. Certain investors of the November 27, 2002 financing who elected to remain in the new bridge loan arrangement received reset provisions of the previous conversion rate and warrant exercise prices to be equivalent to the terms granted to the new Investor.

The total of the fair value of the warrants issued to the new Investor and the incremental intrinsic value of the repriced warrants of certain existing investors of approximately \$480,000 has been recorded as original issue discount, resulting in a reduction in the carrying value of this debt. The original issue discount will be amortized into interest expense over the period of the debt. In the event the debt is converted prior to maturity, the remaining discount will be amortized into interest expense at the conversion date. For the three and six months ended June 30, 2002, approximately \$124,000 and \$214,000

Edgar Filing: EMAGIN CORP - Form 10-Q/A

has been amortized and is included in non-cash interest expense in the accompanying unaudited consolidated statements of operations.

In addition, based on the terms of the bridge loan arrangement, the conversion terms of the debt provide for a beneficial conversion feature. The total value of the beneficial feature of the new debt and the incremental value of the reset conversion feature of the existing debt of approximately \$780,000 was recorded at January 14, 2002 as non-cash interest expense in the accompanying unaudited consolidated statements of operations.

On June 20, 2002, the Company entered into a \$0.2 million Secured Note Purchase Agreement with an Investor. The secured note accrues interest at 11% per annum and matures on November 30, 2002. The Company also granted warrants, exercisable for a period of three years, to purchase 300,000 shares of common stock with an exercise price of \$0.4419 per share to the investor. The fair value warrants issued to this Investor approximated \$84,000 has been recorded as original issue discount, resulting in a reduction in the carrying value of this debt. The original issue discount will be amortized into interest expense over the period of the debt. For the three and six months ended June 30, 2002, approximately \$4,000 has been amortized and is included in non-cash interest expense in the accompanying unaudited consolidated statements of operations.

NOTE 8 - STOCKHOLDERS' EQUITY

The authorized common stock of the Company consists of 100,000,000 shares with a par value of \$0.001 per share.

Prior to the Merger on March 16, 2000, net proceeds of approximately \$23.3 million was raised through the private placement issuance of approximately 3.5 million shares of common stock. Additionally, approximately 9.4 million shares of common stock held by FDC's principal shareholders were cancelled at the time of the Merger.

9

On March 16, 2000 FDC acquired all of the outstanding stock of FED. Under the terms of the agreement, FDC issued approximately 10.5 million shares of its common stock to FED shareholders, and issued approximately 3.9 million options and warrants in exchange for existing FED options and warrants. The total purchase price of the transaction was approximately \$98.5 million, including \$73.4 million of value relating to the shares issued (at a fair value of \$7 per share, the value of the simultaneous private placement transaction of similar securities), \$20.9 million of value relating to the options and warrants exchanged, based on the difference between the fair value and the exercise price of said equity instruments and \$3.8 million of assumed liabilities. The transaction was accounted for using the purchase method of accounting. Accordingly, the purchase price was allocated to the fair value of assets acquired and liabilities assumed.

In January 2002, the Company negotiated settlement of amounts due to a related party for services previously rendered via issuance of 192,493 shares of common stock. As such, the Company recorded the fair value of the shares of approximately \$135,000 in selling, general and administrative expenses in the accompanying unaudited consolidated statement of operations for the three months ended March 31, 2002.

On February 27, 2002, the Company completed a private placement of securities with several institutional and individual investors of 3,617,128 shares of common stock at a price per share of \$0.6913, generating gross proceeds of approximately \$2,500,000, less issuance costs of approximately \$35,000. In connection with the financing arrangement, the Company issued to the investors

Edgar Filing: EMAGIN CORP - Form 10-Q/A

warrants to purchase 1,446,852 shares of common stock of the Company at an exercise price of \$0.7542 per share. Also, the Company issued to an institution warrants to purchase 36,164 shares of common stock in connection with a finder fee arrangement entered into between the two parties. Such warrants are exercisable through February 2005.

On March 4, 2002, the Company entered into an equity line of credit agreement with a private equity fund (the "Fund") whereby the Company has the option, but not the obligation, to sell shares of common stock to the Fund for a three-year period at a price per share, as defined. The agreement provides for certain minimum and maximum monthly amounts up to a maximum of \$15 million and, in certain circumstances, up to \$20 million.

In connection with the equity line of credit, the Company issued 30,000 shares of common stock to the Fund as compensation for certain services rendered in connection with the closing of the line of credit. As such, the Company recorded the fair value of the shares of approximately \$31,000 in selling, general and administrative expenses for the three months ended March 31, 2002. Also, the Company granted warrants purchasing up to 150,000 shares of common stock of the Company at an exercise price of \$0.8731 per share. Such warrants are exercisable through September 2005. The fair value of said warrants of approximately \$140,000 is included in selling, general and administrative expenses for the three months ended March 31, 2002.

On April 1, 2002, Rohm Company LTD purchased 1,282,051 shares of common stock at \$0.78 per share as well as warrants to purchase an additional 512,820 shares of Common Stock at a conversion price of \$0.85 per share for an investment of \$1,000,000.

10

NOTE 9 - EFFECT OF RECENTLY ISSUED ACCOUNTING PRONOUNCEMENTS

In June 2001, the Financial Accounting Standards Board approved the issuance of SFAS No. 141 "Business Combinations", and SFAS No. 142, "Goodwill and Other Intangible Assets". The new standards require that all business combinations initiated after June 30, 2001 must be accounted for under the purchase method. In addition, all intangible assets acquired that are obtained through contractual or legal right, or are capable of being separately sold, transferred, licensed, rented or exchanged shall be recognized as an asset apart from goodwill. Goodwill and intangibles with indefinite lives will no longer be subject to amortization, but will be subject to at least an annual assessment for impairment by applying a fair value based test. eMagin adopted SFAS No. 142 on January 1, 2002. In connection with adopting this standard, eMagin considered the measurement of transitional impairment. eMagin anticipates completing the SFAS No. 142 valuation by the end of fiscal 2002. At this time, eMagin is not able to determine if impairment of its purchased intangibles has incurred. As it relates to goodwill, the initial adoption had no effect on eMagin's financial statements since as of December 31, 2001, eMagin had written off the goodwill balance.

In August 2001, the FASB, issued SFAS, No. 143, "Accounting for Obligations Associated with the Retirement of Long-Lived Assets." SFAS No. 143 addresses financial accounting and reporting for the retirement obligation of an asset. This statement provides that companies should recognize the asset retirement cost at its fair value as part of the cost of the asset and classify the accrued amount as a liability. The asset retirement liability is then accreted to the ultimate payout as interest expense. The initial measurement of the liability would be subsequently updated for revised estimates of the discounted cash outflows. The Statement will be effective for fiscal years beginning after June 15, 2002. eMagin has not yet determined the effect that SFAS No. 143 will have

Edgar Filing: EMAGIN CORP - Form 10-Q/A

on its consolidated financial position, results of operations or cash flows.

In April 2002, the FASB issued SFAS No. 145, "Rescission of FASB Statements No. 4, 44, and 64, Amendment of FASB Statement No. 13, and Technical Corrections." This statement eliminates the requirement under SFAS 4 to aggregate and classify all gains and losses from extinguishment of debt as an extraordinary item, net of related income tax effect. This statement also amends SFAS 13 to require that certain lease modifications with economic effects similar to sale-leaseback transactions be accounted for in the same manner as sale-leaseback transactions. In addition, SFAS No. 145 requires reclassification of gains and losses in all prior periods presented in comparative financial statements related to debt extinguishments that do not meet the criteria for extraordinary item in Accounting Principles Board Opinion ("APB") 30. The statement is effective for fiscal years beginning after May 15, 2002 with early adoption encouraged. The Company will adopt SFAS No. 145 effective January 1, 2003. eMagin does not believe the adoption of SFAS 145 will impact its financial position.

On July 30, 2002, The FASB issued SFAS No. 146, "Accounting for Costs Associated with Exit or Disposal Activities." The standard requires companies to recognize costs associated with exit or disposal activities when they are incurred rather than at the date of a commitment to an exit or disposal plan. Examples of costs covered by the standard include lease termination costs and certain employee severance costs that are associated with a restructuring, discontinued operation, plant closing, or other exit or disposal activity. SFAS No. 146 is to be applied prospectively to exit or disposal activities initiated after December 31, 2002. eMagin is currently evaluating the requirements and impact of this statement on its consolidated results of operations and financial position.

In November 2002, the EITF reached a consensus on Issue 00-21 ("EITF 00-21"), "Multiple-Deliverable Revenue Arrangements." EITF 00-21 addresses how to account for arrangements that may involve the delivery or performance of multiple products, services, and/or rights to use assets. The consensus mandates how to identify whether goods or services or both that are to be delivered separately in a bundled sales arrangement should be accounted for separately because they are separate units of accounting. The guidance can affect the timing of revenue recognition for such arrangements, even though it does not change rules governing the timing or pattern of revenue recognition of individual items accounted for separately. The final consensus will be applicable to agreements entered into in fiscal years beginning after June 15, 2003 with early adoption permitted. Additionally, companies will be permitted to apply the consensus guidance to all existing arrangements as the cumulative effect of a change in accounting principle in accordance with APB Opinion No. 20, "Accounting Changes." The Company is assessing, but at this point does not believe the adoption of EIFT 00-21 will have a material impact on its financial position, cash flows or results of operations.

11

On December 31, 2002, the Financial Accounting Standards Board issued Statement No. 148, Accounting for Stock-Based Compensation - Transition and Disclosure (SFAS 148). SFAS 148 amends SFAS 123, Accounting for Stock-Based Compensation, to provide alternative methods of transition to SFAS 123's fair value method of accounting for stock-based employee compensation. SFAS 148 also amends the disclosure provisions of SFAS 123 and APB Opinion No. 28, Interim Financial Reporting, to require disclosure in the summary of significant accounting policies of the effects of an entity's accounting policy with respect to stock-based employee compensation on reported net income and earnings per share in annual and interim financial statements. The adoption of SFAS 148 disclosure requirements will not have an effect on the Company's Consolidated Financial Statements. The Company does not intend to adopt the fair value method of accounting for stock-based employee compensation at this time.

Edgar Filing: EMAGIN CORP - Form 10-Q/A

NOTE 10 - RECLASSIFICATIONS

Certain amounts in the June 30, 2001 financial statements have been reclassified to conform to the June 30, 2002 classification.

NOTE 11 - CONTRACTUAL OBLIGATIONS AND COMMERCIAL COMMITMENTS

The following table summarizes contractual obligations and commercial commitments at June 30, 2002:

Contractual Obligations	Less than 1 year	One-Three years	Four-Five years	After 5 years
Long Term Debt		2,127,499		
Short Term Debt	3,307,762			
Operating leases	5,467,850	7,482,757		
Capital leases	1,455,109	250,695		

Item 2. Management's Discussion and Analysis of Financial Condition and Results of Operation

Statement of Forward-Looking Information

This report contains forward-looking statements within the meaning of Section 27A of the Securities Act of 1933 and Section 21E of the Securities Exchange Act of 1934. These statements relate to future events or our future financial performance. In some cases, you can identify forward-looking statements by terminology such as "may," "will," "should," "expect," "plan," "anticipate," "believe," "estimate," "predict," "potential" or "continue," the negative of such terms, or other comparable terminology. These statements are only predictions. Actual events or results may differ materially from those in the forward-looking statements as a result of various important factors. Although we believe that the expectations reflected in the forward-looking statements are reasonable, such should not be regarded as a representation by the Company, or any other person, that such forward-looking statements will be achieved. The business and operations of the Company are subject to substantial risks, which increase the uncertainty inherent in the forward-looking statements contained in this release.

We undertake no duty to update any of the forward-looking statements, whether as a result of new information, future events or otherwise. Readers are cautioned not to place undue reliance on the forward-looking statements contained in this report.

Overview

eMagin Corporation designs, develops, and markets OLED (organic light emitting diode)-on-silicon microdisplays and related information technology solutions. We integrate OLED technology with silicon chips to produce high-resolution microdisplays smaller than one-inch diagonally which, when viewed through a magnifier, create a virtual image that appears comparable to that of a computer monitor or a large-screen television. We shipped initial samples of our first

Edgar Filing: EMAGIN CORP - Form 10-Q/A

commercial microdisplay product in March 2001. We are now accepting orders for larger quantities of our first microdisplay product and shipping samples of our second commercial microdisplay product. These products are being applied or considered for near-eye and headset applications in products such as entertainment and gaming headsets, handheld Internet and telecommunication appliances, viewfinders, and wearable computers to be manufactured by original equipment manufacturer (OEM) customers. eMagin Corporation is a leading developer of organic light emitting diode ("OLED") microdisplays, and optics systems. We currently provide custom video display headsets, in limited quantities, largely to government customers. We are seeking to transition into commercial distribution of our products and technology as components to OEM system manufacturers for near-eye and headset applications in products such as handheld telecommunication and Internet devices, wearable computers, and computer and entertainment headsets.

Company History

eMagin Corporation was originally incorporated as Fashion Dynamics Corporation on January 23, 1996 under the laws of the State of Nevada. For the three years prior its acquisition of FED Corporation, Fashion Dynamics Corporation had no active business operations, and sought to acquire an interest in a business with long-term growth potential. On March 16, 2000, Fashion Dynamics Corporation acquired FED Corporation (derived from field emissive device), subsequently changed its name to eMagin Corporation (derived from "electronic imaging") and listed its common stock on the American Stock Exchange under the "EMA" trading symbol.

At our annual meeting of stockholders held on July 16, 2001, the stockholders approved the re-incorporation of eMagin Corporation as a Delaware corporation. The re-incorporation became effective on July 16, 2001 by merging eMagin Corporation, a Nevada corporation ("eMagin-Nevada"), into its then wholly owned subsidiary, eMagin Corporation, a Delaware corporation (formerly known as FED Corporation as described above) ("eMagin-Delaware"). Upon completion of this merger, eMagin-Nevada ceased to exist as a corporate entity and eMagin-Delaware succeeded to the assets and liabilities of eMagin-Nevada. Under the merger agreement for the re-incorporation, each outstanding share of eMagin-Nevada common stock was automatically converted into one share of eMagin-Delaware common stock at the time the merger became effective. There has been no interruption in the trading of our common stock as a result of the re-incorporation. The re-incorporation also resulted in the implementation of a new certificate of incorporation and by-laws for the Company, as the existing certificate of incorporation and by-laws of eMagin-Delaware continues as the certificate of incorporation and by-laws of the Company and has replaced the articles of association and by-laws of eMagin-Nevada. No change in the corporate name, board members, business, management, fiscal year, assets, liabilities, employee benefit plans or location of principal facilities of eMagin occurred as a result of the re-incorporation.

Our history has been as a developmental stage company. We are now transitioning to manufacturing and intend to significantly increase our marketing, sales, and research and development efforts, and expand our operating infrastructure. Most of our operating expenses are fixed in the near term. If we are unable to generate significant revenues, our net losses in any given period could be greater than expected.

CRITICAL ACCOUNTING POLICIES

The Securities and Exchange Commission ("SEC") defines "critical accounting policies" as those that require application of management's most difficult,

Edgar Filing: EMAGIN CORP - Form 10-Q/A

subjective or complex judgments, often as a result of the need to make estimates about the effect of matters that are inherently uncertain and may change in subsequent periods.

Not all of the accounting policies require management to make difficult, subjective or complex judgments or estimates. However, the following policy could be deemed to be critical within the SEC definition.

Revenue Recognition

Revenue on product sales is recognized when persuasive evidence of an arrangement exists, such as when a purchase order or contract is received from the customer, the price is fixed, title to the goods has changed and there is a reasonable assurance of collection of the sales proceeds. We obtain written purchase authorizations from our customers for a specified amount of product at a specified price and consider delivery to have occurred at the time of shipment. Revenue is recognized at shipment and we record a reserve for estimated sales returns, which is reflected as a reduction of revenue at the time of revenue recognition.

Revenues from research and development activities relating to firm fixed-price contracts are generally recognized on the percentage-of-completion method of accounting as costs are incurred (cost-to-cost basis). Revenues from research and development activities relating to cost-plus-fee contracts include costs incurred plus a portion of estimated fees or profits based on the relationship of costs incurred to total estimated costs. Contract costs include all direct material and labor costs and an allocation of allowable indirect costs as defined by each contract, as periodically adjusted to reflect revised agreed upon rates. These rates are subject to audit by the other party. Amounts can be billed on a bi-monthly basis. Billing is based on subjective cost investment factors.

Revenues

Revenues for the three months and six months ended June 30, 2002 were \$0.3 million and \$0.4 million, respectively, as compared to \$1.6 million and \$3.6 million respectively, for the three months and six months ended June 30, 2001. Current year revenues consist primarily of product sales and increased by \$0.1 million and \$0.1 million for the three months and six months ended June 30, 2002, respectively, as compared to the three months and six months ended June 30, 2001. We ended the second quarter with a backlog of over \$1 million in short term sales orders. Government R&D contract revenues decreased by \$1.4 million and \$3.4 million for the three months and six months ended June 30, 2002, respectively, as compared to the three months and six months ended June 30, 2001. Government R&D contract revenues will remain significantly lower in 2002 as the company focuses on product revenues rather than performing Government R&D contracts, although product revenues include sales to government contractors which are funded by Government development or procurement contracts.

Costs and Expenses

Research and Development

Research and development expenses include salaries, development materials, equipment lease and depreciation expenses, electronics, rent, utilities and costs associated with operating the Company's manufacturing facility. Gross research and development expenses for the three months and six months ended June 30, 2002 were \$3.3 million and \$5.5 million, respectively. For the same period in 2001, the Company's gross research and development expenses were \$3.8 million and \$7.2 million, respectively. The \$0.5 million and \$1.7 million decrease in gross expenses for the three months and six months ended June 30, 2002, as compared to the three months and six months ended June 30, 2001 reflects

Edgar Filing: EMAGIN CORP - Form 10-Q/A

reduction in staffing and reduction in expenditures related to the company's difficult cash position.

14

Selling, General and Administrative

Selling, general and administrative expenses consist principally of salaries and fees for professional services, legal fees incurred in connection with patent filings and related matters, amortization, non-cash compensation as well as other marketing and administrative expenses. Selling, general and administrative expenses, for the three months and six months ended June 30, 2002 were \$0.4 million and \$3.4 million, respectively, as compared to \$2.8 million and \$5.3 million for the three months and six months ended June 30, 2001. The decrease in selling, general and administrative expenses was primarily due to decreases in personnel costs, patent filings and legal fees. We expect marketing, general and administrative expenses to increase in future periods as we add to our sales staff and make additional investments in marketing activities.

Included in Selling, General and Administrative expense is non-cash stock-based compensation expense for the three and six months ended June 30, 2002 were (\$0.4) million and \$0.9 million, respectively, as compared to \$0.7 million and \$1.5 million for the three months and six months ended June 30, 2001. The non-cash stock-based compensation expense for the three months and six months ended June 30, 2002 decreased by \$1.1 million and \$0.6 million, respectively. Non-cash stock-based compensation costs are the result of the issuance of stock options at below fair market values.

Amortization of Purchased Intangibles

Amortization of purchased intangibles expense for the three months and six months ended June 30, 2002 was \$0.1 million and \$0.7 million, respectively, as compared to \$5.9 million and \$11.7 million for the three months and six months ended June 30, 2001. The decrease of \$5.8 million and \$11 million in these non-cash charges, is the result of the prior year's write-down of the balance in purchased intangibles and goodwill and its impact on future year's amortization.

Other Income (Expense)

Other income (expenses) for the three months and six months ended June 30, 2002 was (\$0.4) million and (\$1.4) million. The increase of \$1.0 million in expense for this non-cash charge was due primarily to the increase in debt discount from the beneficial conversion of a bridge loan entered into by the company.

Liquidity and Capital Resources

Current Financial Position and Need for Additional Financing

We need immediately to raise equity or debt financing or identify other cash sources such as customer financing in order to continue as a going concern and need to raise substantial additional equity or debt financing in the very near future to fund the commercialization of our products. In the event that we raise additional funds through equity financing, substantial equity dilution to investors will result.

We had cash and cash equivalents of \$1.7 million as of March 31, 2002, \$0.1 million as of June 30, 2002 and \$0.1 million as of August 1, 2002. Our monthly operating expenses normally are approximately \$1.0 million. In addition, \$3.1 million of outstanding indebtedness plus accrued interest is due on August 30, 2002. We cannot assure you that our lenders will agree to reschedule or renegotiate the terms of this indebtedness before it becomes due. As of June 30,

Edgar Filing: EMAGIN CORP - Form 10-Q/A

2002, another significant portion of our working capital deficit consisted of \$5.5 million in accounts payable. A substantial portion of this amount is past due and owed to leasing companies and law firms. We are currently engaged in discussions regarding rescheduling payment terms and renegotiating balances due with our major creditors.

15

Subject to available funding, we currently anticipate that we will continue to experience significant growth in our operating expenses for the foreseeable future and that our operating expenses will be the principal use of our cash. In particular, we expect that salaries for employees engaged in manufacturing operations, purchase of inventory and expenses of increased sales and marketing efforts will be the principal uses of additional cash that we raise during the remainder of 2002. Until we raise sufficient funding to manufacture our products and until our inventory procurement and our manufacturing processes are stabilized, which we expect will take approximately three to six months after any funding, we may experience difficulties in making timely shipments to all of our customers. After our urgent cash needs are addressed, we expect that our cash requirements over the next 12 months will be met by a combination of additional equity or debt financing, and revenues generated by the sales. We expect to continue to devote substantial resources to manufacturing, marketing and selling our products.

Substantially all of our revenues to date have been derived from research and development contracts with the U.S. federal government. We received no revenues from government contracts for the six months ended June 30, 2002, and we received \$5.0 million for the year ended December 31, 2001, and \$2.6 million for the year ended December 31, 2000. These figures do not include our government contracts in which we provide a cost-share. We anticipate that our total revenues from government contracts in 2002 will be substantially lower than in previous years. The government may terminate our contracts at its discretion. We plan to submit proposals for additional development contract funding; however, funding is subject to legislative authorization and even if funds are appropriated, they may be withdrawn based on changes in government priorities.

We have received increased orders for our products during the third quarter of 2002, and we believe that customer interest remains high. The company ended the second quarter with a backlog of over \$1 million in short term orders. Provided that we can obtain adequate financing and successfully negotiate debt restructuring, management believes that the prospects for growth of product revenue remain high. We have received more than \$10 million in purchase agreements and are in discussion for additional orders. We are in the early phases of production, although our progress has been impeded by our current cash position. Anticipated increased shipments in the second quarter were delayed, primarily due to certain supply delays, even though base displays were prepared. These components were received behind schedule in July, and shipments resumed. However, our cash position has resulted in reductions in manufacturing staff availability.

Our cash requirements depend on numerous factors, including completion of our product development activities, ability to commercialize our products, market acceptance of our products and other factors. We expect to devote substantial capital resources to continue our development programs directed at commercializing our products in our target markets, hire and train additional staff, expand our research and development activities, develop and expand our manufacturing capacity and begin production activities. Through June 30, 2002 we have incurred accumulated losses of approximately \$127.2 million since our inception and we anticipate incurring significant losses as we fund our growth. Since inception we have financed our operations through private placements of equity securities, research and development contracts and borrowings. As of June

Edgar Filing: EMAGIN CORP - Form 10-Q/A

30, 2002, we had \$0.1 million in cash and cash equivalents and have a working capital deficit of \$9.3million. In December 2001 and July 2002, we took certain actions to reduce our workforce due to our difficult working capital constraints.

Net cash used in operating activities was \$5.2 million for the six months ended June 30, 2002. Cash used in operating activities resulted primarily from our net loss partially offset by increases from non-cash charges and increases in accounts payable. Cash used in operating activities for the six months ended June 30, 2001 was \$3.3 million resulting primarily from operating losses.

Net cash used by investing activities was \$0.1 million for the six months ended June 30, 2002, all of which was used for capital expenditures. Net cash used by investing activities for the six months ended June 30, 2001 was \$0.2 million, which was used for capital expenditures.

16

Net cash provided by financing activities was \$4.7 million for the six months ended June 30, 2002, and consisted primarily of proceeds from sale of equity and the issuance of debt. Net cash used by financing activities was \$0.1 million for the six months ended June 30, 2001, and consisted primarily of cash payments for offering costs on amounts raised in prior periods.

Risk Factors

In evaluating our business, prospective investors and shareholders should carefully consider the following risks. Any of the following risks could have a material adverse impact on our business, operating results and financial condition and result in a complete loss of your investment.

Risks Related To Our Financial Results

If we cannot operate as a going concern, our stock price will decline and you may lose your entire investment. Our auditors have included an explanatory paragraph in their report on our financial statements for the year ended December 31, 2001 which states that, due to recurring losses from operations since inception of the Company, there is substantial doubt about our ability to continue as a going concern. Our financial statements for the three months ended June 30, 2002 do not include any adjustments that might result from our inability to continue as a going concern. These adjustments could include additional liabilities and the impairment of certain assets. If we had adjusted our financial statements for these uncertainties, our operating results and financial condition would have been materially and adversely affected.

If we do not obtain additional cash to operate our business, we may not be able to execute our business plan and may not achieve profitability. In the event that cash flow from operations is less than anticipated and we are unable to secure additional funding, in order to preserve cash, we would be required to further reduce expenditures and effect further reductions in our corporate infrastructure, either of which could have a material adverse effect on our ability to continue our current level of operations. Even if we obtain additional working capital in the near future, to the extent that operating expenses increase or we need additional funds to make acquisitions, develop new technologies or acquire strategic assets, the need for additional funding may be accelerated and there can be no assurances that any such additional funding can be obtained on terms acceptable to us, if at all. If we are not able to generate sufficient capital, either from operations or through additional financing, to fund our current operations, we may not be able to continue as a going concern. If we are unable to continue as a going concern, we may be forced to significantly reduce or cease our current operations. This could significantly

Edgar Filing: EMAGIN CORP - Form 10-Q/A

reduce the value of our securities, which could result in our de-listing from the American Stock Exchange and cause investment losses for our shareholders.

We may not maintain The American Stock Exchange (the "Exchange") listing requirements. To maintain the listing of our common stock on the Exchange, we are required to meet certain listing requirements, including, in the case of our common stock selling for a substantial period of time at a low price per share, effecting a reverse split of such shares within a reasonable time after being notified by the Exchange that such action is appropriate under all the circumstances. In its review of whether a share price is too low or whether a reverse split is appropriate, the Exchange will consider all pertinent factors, including market conditions in general, the number of shares outstanding, plans which may have been formulated by management, applicable regulations of the state of incorporation or of any governmental agency having jurisdiction over eMagin, and the relationship to other Exchange policies regarding continued listing. If the Exchange were to determine that our share price is too low and that we should reverse split our shares but we were unable to comply for any reason, our common stock may be delisted from the Exchange. Delisting of our common stock could materially adversely affect the market price, the market liquidity of our common stock and our ability to raise necessary capital. Moreover, it would likely be more difficult to trade in or to obtain accurate quotations as to the market price of our common stock. Maintaining compliance with all SEC requirements is important for maintaining a listing, including timely filings reviewed or audited by independent public accounts, regular annual shareholder meetings, and the payment of required fees.

17

We have a history of losses since our inception and expect to incur losses for the foreseeable future. Accumulated losses excluding non-cash transactions as of June 30, 2002, were \$27.3 million and acquisition related non-cash transactions were \$100.9 million, which resulted in an accumulated net loss of \$128.2 million, the majority of which was related to the March 2000 merger and its subsequent write-down of its goodwill. The non-cash losses were dominated by the amortization and write-down of goodwill and purchased intangibles and write-down of acquired in process research and development related to the March 2000 acquisition, and also included some non-cash stock-based compensation. We have not yet achieved profitability and we can give no assurances that we will achieve profitability within the foreseeable future as we fund operating and capital expenditures in areas such as establishment and expansion of markets, sales and marketing, operating equipment and research and development. We cannot assure investors that we will ever achieve or sustain profitability or that our operating losses will not increase in the future.

We are presently dependent on U.S. government contracts. The majority of our revenues to date have been derived from research and development contracts with the U.S. federal government. We may continue to rely on such contracts for revenue until volume commercial sales commence. The government at its discretion may terminate our government contracts. We plan to submit proposals for additional development contract funding; however, funding is subject to legislative authorization and even if funds are appropriated such funds may be withdrawn based on changes in government priorities. No assurances can be given that our existing contracts will continue, that we will be successful in obtaining new government contracts, or that programs through which our contracts are funded will continue to be funded beyond the current fiscal year. Our inability to obtain revenues from government contracts could have a material adverse effect on our results of operations.

Risks Related To Our Intellectual Property

We rely on our license agreement with Eastman Kodak for the development of our

Edgar Filing: EMAGIN CORP - Form 10-Q/A

products, and the termination of this license, Eastman Kodak's licensing of its OLED technology to others for microdisplay applications, or the sublicensing by Eastman Kodak of our OLED technology to third parties, could have a material adverse impact on our business. Our principal products under development utilize OLED technology that we license from Eastman Kodak. We rely upon Eastman Kodak to protect and enforce key patents held by Eastman Kodak, relating to OLED display technology. Eastman Kodak's patents expire over a range of years from 2002 to 2020. Our license with Eastman Kodak could terminate if we fail to perform any material term or covenant under the license agreement. Since our license from Eastman Kodak is non-exclusive, Eastman Kodak could also elect to become a competitor itself or to license OLED technology for microdisplay applications to others who have the potential to compete with us. The occurrence of any of these events could have a material adverse impact on our business.

We may not be successful in protecting our intellectual property and proprietary rights. We rely on a combination of patents, trade secret protection, licensing agreements and other arrangements to establish and protect our proprietary technologies. If we fail to successfully enforce our intellectual property rights, our competitive position could suffer, which could harm our operating results. Patents may not be issued for our current patent applications, third parties may challenge, invalidate or circumvent any patent issued to us, unauthorized parties could obtain and use information that we regard as proprietary despite our efforts to protect our proprietary rights, rights granted under patents issued to us may not afford us any competitive advantage, others may independently develop similar technology or design around our patents, our technology may be available to licensees of Eastman Kodak, and protection of our intellectual property rights may be limited in certain foreign countries. We may be required to expend significant resources to monitor and police our intellectual property rights. Any future infringement or other claims or prosecutions related to our intellectual property could have a material adverse effect on our business. Any such claims, with or without merit, could be time consuming to defend, result in costly litigation, divert management's attention and resources, or require us to enter into royalty or licensing agreements. Such royalty or licensing agreements, if required, may not be available on terms acceptable to us, if at all. Protection of intellectual property has historically been a large yearly expense for eMagin. We have not been in a financial position to properly protect all of our intellectual property, and may not be in a position to do so for some time even if sufficient funding is available for the production and a sales ramp

18

Risks Related To the Microdisplay Industry

The commercial success of the microdisplay industry depends on the widespread market acceptance of microdisplay systems products. The market for microdisplays is emerging. Our success will depend on consumer acceptance of microdisplays as well as the success of the commercialization of the microdisplay market. At present, it is difficult to assess or predict with any assurance the potential size, timing and viability of market opportunities for our technology in this market. The viewfinder microdisplay market sector is well established with entrenched competitors who we must displace.

The microdisplay systems business is intensely competitive. We do business in intensely competitive markets that are characterized by rapid technological change, changes in market requirements and competition from both other suppliers and our potential OEM customers. Such markets are typically characterized by price erosion. This intense competition could result in pricing pressures, lower sales, reduced margins, and lower market share. Our ability to compete successfully will depend on a number of factors, both within and outside our control. We expect these factors to include the following: our success in

Edgar Filing: EMAGIN CORP - Form 10-Q/A

designing, manufacturing and delivering expected new products, including those implementing new technologies on a timely basis; our ability to address the needs of our customers and the quality of our customer services; the quality, performance, reliability, features, ease of use and pricing of our products; successful expansion of our manufacturing capabilities; our efficiency of production, and ability to manufacture and ship products on time; the rate at which original equipment manufacturing customers incorporate our product solutions into their own products; the market acceptance of our customers' products; and product or technology introductions by our competitors. Our competitive position could be damaged if one or more potential OEM customers decide to manufacture their own microdisplays, using OLED or alternate technologies. In addition, our customers may be reluctant to rely on a relatively small company such as eMagin for a critical component. We cannot assure you that we will be able to compete successfully against current and future competition, and the failure to do so would have a materially adverse effect upon our business, operating results and financial condition.

The display industry is cyclical. The display industry is characterized by fabrication facilities that require large capital expenditures and long lead times to construct leading to frequent mismatches between supply and demand. The OLED microdisplay sector may experience overcapacity if and when all of the facilities presently in the planning stage come on line leading to a difficult market in which to sell our products.

Competing products may get to market sooner than ours. Our competitors are investing substantial resources in the development and manufacture of microdisplay systems using alternative technologies such as reflective liquid crystal displays (LCDs), LCD-on-Silicon ("LCOS") microdisplays, active matrix electroluminescence and scanning image systems, and transmissive active matrix LCDs. Color LCOS displays are currently in initial production, and may be in higher volume production a year or more earlier than our microdisplays, which could have a significant detrimental effect on our market opportunity.

Our competitors have many advantages over us. As the microdisplay market develops, we expect to experience intense competition from numerous domestic and foreign companies including well-established corporations possessing worldwide manufacturing and production facilities, greater name recognition, larger retail bases and significantly greater financial, technical, and marketing resources than us, as well as from emerging companies attempting to obtain a share of the various markets in which our microdisplay products have the potential to compete.

19

Our products are subject to lengthy OEM development periods. We plan to sell most of our microdisplays to OEMs who will incorporate them into products they sell. OEMs determine during their product development phase whether they will incorporate our products. The time elapsed between initial sampling of our products by OEMs, the custom design of our products to meet specific OEM product requirements, and the ultimate incorporation of our products into OEM consumer products is significant. If our products fail to meet our OEM customers' cost, performance or technical requirements or if unexpected technical challenges arise in the integration of our products into OEM consumer products, our operating results could be significantly and adversely affected. Long delays in achieving customer qualification and incorporation of our products could adversely affect our business.

Our products will likely experience rapidly declining unit prices. In the markets in which we expect to compete, prices of established products tend to decline significantly over time. In order to maintain our profit margins over the long term, we believe that we will need to continuously develop product

Edgar Filing: EMAGIN CORP - Form 10-Q/A

enhancements and new technologies that will either slow price declines of our products or reduce the cost of producing and delivering our products. While we anticipate many opportunities to reduce production costs over time, there can be no assurance that these cost reduction plans will be successful. We may also attempt to offset the anticipated decrease in our average selling price by introducing new products, increasing our sales volumes or adjusting our product mix. If we fail to do so, our results of operations would be materially and adversely affected.

Risks Related To Manufacturing

We expect to depend on semiconductor contract manufacturers to supply our silicon integrated circuits and other suppliers of key components, materials and services. We do not manufacture our silicon integrated circuits on which we incorporate the OLED. Instead, we expect to provide the design layouts to semiconductor contract manufacturers who will manufacture the integrated circuits on silicon wafers. We also expect to depend on suppliers of a variety of other components and services, including circuit boards, graphic integrated circuits, passive components, materials and chemicals, and equipment support. Our inability to obtain sufficient quantities of high quality silicon integrated circuits or other necessary components, materials or services on a timely basis could result in manufacturing delays, increased costs and ultimately in reduced or delayed sales or lost orders which could materially and adversely affect our operating results.

We have not manufactured OLED-on-silicon products in large commercial quantities and we do not know if our manufacturing yields or throughput will be commercially viable. While manufacturability does not appear to be a high-risk issue at this time, it is also not yet been proven to be a non-issue. In order for us to be successful as a product or component manufacturer, our products must be manufactured to meet high quality standards in commercial quantities at competitive prices. We have not begun quantity commercial production of any of our OLED-based products and we are not staffed adequately to run high quantity production. The manufacture of OLED-on-silicon is new and OLED microdisplays have not been produced in significant volumes. We expect to begin commercial production during 2002 to meet anticipated demand for our products. If we are unable to produce our products in sufficient quantity, we will be unable to attract customers. In addition, we cannot assure you that once we commence volume production we will attain yields at high throughput that will result in profitable gross margins or that we will not experience manufacturing problems which could result in delays in delivery of orders or product introductions.

We are dependent on a single manufacturing line. We initially expect to manufacture our products on a single manufacturing line. If we experience any significant disruption in the operation of our manufacturing facility we may be unable to supply microdisplays to our customers. For this reason, some OEMs may also be reluctant to commit a broad line of products to our microdisplays without a second production facility in place. Interruptions in our manufacturing could be caused by manufacturing equipment problems, the introduction of new equipment into the manufacturing process or delays in the delivery of new manufacturing equipment. Lead-time for delivery of manufacturing equipment can be extensive. No assurance can be given that we will not lose potential sales or be unable to meet production orders due to production interruptions in our manufacturing line. In order to meet the requirements of certain OEMs for multiple manufacturing sites, we will have to expend capital to secure additional sites and may not be able to manage multiple sites successfully.

Risks Related To Our Business

Edgar Filing: EMAGIN CORP - Form 10-Q/A

Our success depends in a large part on the continuing service of key personnel. Changes in management could have an adverse effect on our business. We are dependent upon the active participation of several key management personnel including Gary W. Jones, our Chief Executive Officer. We also need to recruit additional management in order to expand according to our business plan. The failure to attract and retain additional management or personnel could have a material adverse effect on our operating results and financial performance.

Our success depends on attracting and retaining highly skilled and qualified technical and consulting personnel. We must hire highly skilled technical personnel as employees and as independent contractors in order to develop our products. The competition for skilled technical employees is intense and we may not be able to retain or recruit such personnel. We must compete with companies that possess greater financial and other resources than we do, and that may be more attractive to potential employees and contractors. To be competitive, we may have to increase the compensation, bonuses, stock options and other fringe benefits offered to employees in order to attract and retain such personnel. The costs of retaining or attracting new personnel may have a materially adverse affect on our business and our operating results. In addition, difficulties in hiring and retaining technical personnel could delay the implementation of our business plan.

Our business depends on new products and technologies. The market for our products is characterized by rapid changes in product, design and manufacturing process technologies. Our success depends to a large extent on our ability to develop and manufacture new products and technologies to match the varying requirements of different customers in order to establish a competitive position and become profitable. Furthermore, we must adopt our products and processes to technological changes and emerging industry standards and practices on a cost-effective and timely basis. Our failure to accomplish any of the above could harm our business and operating results.

Our microdisplay business may not be successful. The market for microdisplays may develop later than anticipated by us may therefore limit our sales potential for the foreseeable future.

We generally do not have long-term contracts with our customers. Our business is operated on the basis of short-term purchase orders and we cannot guarantee that we will be able to obtain long-term contracts for some time. In the absence of a backlog of orders that can only be canceled with penalty, we plan production on the basis of internally generated forecasts of demand, which makes it difficult to accurately forecast revenues. If we fail to accurately forecast operating results, our business may suffer and the value of your investment in the Company may decline.

Our business strategy may fail if we cannot continue to form strategic relationships with companies that manufacture and use products that could incorporate our OLED-on-silicon technology. Our prospects will be significantly affected by our ability to develop strategic alliances with OEMs for incorporation of our OLED-on-silicon technology into their products. While we intend to continue to establish strategic relationships with manufacturers of electronic consumer products, personal computers, chipmakers, lens makers, equipment makers, material suppliers and/or systems assemblers, there is no assurance that we will be able to continue to establish and maintain strategic relationships on commercially acceptable terms, or that the alliances we do enter in to will realize their objectives. Failure to do so would have a material adverse effect on our business.

Edgar Filing: EMAGIN CORP - Form 10-Q/A

We will need to obtain additional financing, which may not be available on suitable terms, and as a result our ability to grow or continue existing operations may be limited. Our future liquidity and capital requirements are difficult to predict because they depend on numerous factors, including our success in completing the development of our products, manufacturing and marketing our products and competing technological and market developments. We may not be able to generate sufficient cash from our operations to meet additional working capital requirements, support additional capital expenditures or take advantage of acquisition opportunities. In addition, substantial additional capital may be required in the future to fund product development and product launches. No assurance can be given that additional financing will be available or that, if available, such financing will be obtainable on terms favorable to our shareholders or us. To the extent we raise additional capital by issuing equity or securities convertible into equity, our current shareholders will suffer dilution in ownership. If needed capital is unavailable, our ability to continue to operate and grow our business could be adversely affected. Even if capital is available at acceptable cost, we might not be able to manage growth effectively.

Our business depends to some extent on international transactions. We purchase needed materials from companies located abroad and may be adversely affected by political and currency risk, as well as the additional costs of doing business with a foreign entity. In addition, many of the OEMs which are the most likely long term purchasers of our microdisplays are located abroad exposing us to additional political and currency risk. We may find it necessary to locate manufacturing facilities abroad to be closer to our customers which could give expose us to various risks including management of a multi-national organization, the complexities of complying with foreign law and custom, political instability and the complexities of taxation in multiple jurisdictions.

Our business may expose us to product liability claims. Our business exposes us to potential product liability claims. Although no such claim has been brought against us to date, and to our knowledge no such claim is threatened or likely, we may face liability to product users for damages resulting from the faulty design or manufacture of our products. While we maintain product liability insurance coverage, there can be no assurance that product liability claims will not exceed coverage limits, fall outside the scope of such coverage, or that such insurance will continue to be available at commercially reasonable rates, if at all.

Our business is subject to environmental regulations and possible liability arising from potential employee claims of exposure to harmful substances used in the development and manufacture of our products. We are subject to various governmental regulations related to toxic, volatile, experimental and other hazardous chemicals used in our design and manufacturing process. Our failure to comply with these regulations could result in the imposition of fines or in the suspension or cessation of our operations. Compliance with these regulations could require us to acquire costly equipment or to incur other significant expenses. We develop, evaluate and utilize new chemical compounds in the manufacture of our products. While we attempt to ensure that our employees are protected from exposure to hazardous materials we cannot assure you that potentially harmful exposure will not occur or that we will not be liable to employees as a result.

Risks Related To Our Stock

The substantial number of shares that are or will be eligible for sale could cause our common stock price to decline even if the Company is successful. Sales of significant amounts of common stock in the public market, or the perception that such sales may occur, could materially affect the market price of our common stock. These sales might also make it more difficult for us to sell

Edgar Filing: EMAGIN CORP - Form 10-Q/A

equity or equity-related securities in the future at a time and price that we deem appropriate. As of May 1, 2002, we have outstanding options to purchase 5,161,280 shares; most are currently locked-up due to contractual restrictions.. The restrictions on the sale of the remaining shares will lapse between February 1, 2002 and January 7, 2003. There are also outstanding warrants to purchase 4,982,906 shares of common stock.

We do not intend to pay dividends; you will not receive funds without selling shares; and you may lose the entire amount of your investment. We have not paid any dividends on our common stock and we do not plan to pay cash dividends in the foreseeable future. We intend to retain our earnings, if any, for use in our business. We further cannot assure you that you will receive a return on your investment when you sell your shares or that you will not lose the entire amount of your investment.

22

Our principal stockholders, officers and directors will own a significant voting interest in our voting stock. Current directors and officers of eMagin Corporation or their affiliates beneficially own a large percentage of our outstanding common stock. If these shareholders were to vote together, they could significantly influence the outcome of items that are submitted to a vote of the shareholders including the election of our directors.

We have a staggered Board of Directors and other anti-takeover provisions, which could inhibit potential investors or delay or prevent a change of control that may favor you. Our Board of Directors is divided into three classes and our Board members are elected for terms that are staggered. This could discourage the efforts by others to obtain control of the company. Some of the provisions of our certificate of incorporation, our bylaws and Delaware law could, together or separately, discourage potential acquisition proposals or delay or prevent a change in control. In particular, our board of directors is authorized to issue up to 10,000,000 shares of preferred stock (less any outstanding shares of preferred stock) with rights and privileges that might be senior to our common stock, without the consent of the holders of the common stock.

We cannot forecast our future performance. We cannot accurately forecast our revenues because of our limited commercial operating history and because the OLED microdisplay market is only beginning to emerge. We may experience significant fluctuations in our quarterly operating results due to many factors, which are outside our control. These factors include: fluctuation in demand and orders for our products; timing or cost of future supply or equipment deliveries; manufacturing capacity and yields; variations in product and process development costs; expenses or operational disruptions resulting from acquisitions; activities of our competitors; adequate working capital; and general economic conditions. Due to these factors, we cannot anticipate with any degree of certainty what our revenues, if any, will be in future periods. You have limited historical financial data and operating results with which to evaluate our business and our prospects. As a result, you should consider our prospects in light of the expense, difficulties and delays frequently encountered by early stage companies formed to pursue development of new technologies.

Our share price is likely to be highly volatile which may result in substantial losses for investors. Share price volatility may subject us to securities class action litigation. Prices and trading volume for technology related stock has been highly volatile. Accordingly, our stock prices are likely to also be highly volatile. Shareholders may experience a decrease in the value of their common stock regardless of our operating performance or prospects. In addition, the trading price of our common stock could be subject to wide fluctuations in response to: our perceived prospects; quarter to quarter variations in our

Edgar Filing: EMAGIN CORP - Form 10-Q/A

operating results; changes in earnings estimates or recommendations by securities analysts and market perceptions of our operating results in relation to those estimates or recommendations; changes in market valuation of companies in the microdisplay systems industry; announcements of technological innovations or new products by us or our competitors; economic, political, and issues associated with our customers, suppliers, partners, accountants, governmental agencies in the USA and elsewhere, or other parties; sales of shares by other shareholders; and general conditions in the personal products industries or stock market conditions. In the past, securities class action litigation has often been instituted against companies following periods of volatility in their share price. Those companies, like us, that are involved in rapidly changing technology markets are particularly subject to this risk. This type of litigation, if instituted against us, could result in substantial costs and divert our management's attention and resources, which could cause serious harm to our business.

23

ITEM 3: QUALITATIVE AND QUANTITATIVE DISCLOSURES ABOUT MARKET RISK

This Form 10-Q report contains forward-looking statements within the meaning of the securities laws that are based on current expectations, estimates, forecasts and projections about the industries in which eMagin operates, management's beliefs, and assumptions made by management. In addition, other written or oral statements, which constitute forward-looking statements, may be made by or on behalf of eMagin. Words such as "expects", "anticipates", "intends", "plans", "believes", "could", "seeks", "estimates", variations of such words and similar expressions are intended to identify such forward-looking statements. These statements are not guarantees of future performance and involve certain risks, uncertainties and assumptions which are difficult to predict. Therefore, actual outcomes and results may differ materially from what is expressed or forecasted in such forward-looking statements, whether as a result of new information, future events or otherwise. Factors that could cause or contribute to such differences in outcomes and results, include, but are not limited to, those discussed below.

Interest Rate Risk

Substantially all of the Company's cash equivalents and investment securities are at fixed interest rates, and as such, the fair market value of these instruments is affected by changes in market interest rates. We believe that the market risk arising from our holdings of these financial instruments is immaterial. However, in the future, we may invest in securities with maturities of more than one year, which may carry greater interest rate risk.

Foreign Currency Exchange Risk

Presently, all of the Company's research and development contract payments are made in U. S. dollars and, consequently, we believe we have no direct foreign currency exchange rate risk. However, in the future, we may enter into contracts in foreign currencies, which may subject the Company to foreign exchange rate risk. We do not have any derivative instruments and do not presently engage in hedging transactions.

24

PART II--OTHER INFORMATION

Item 5. Other Information

Edgar Filing: EMAGIN CORP - Form 10-Q/A

On April 3, 2002, the Company announced that it had received a strategic investment from ROHM Company LTD. ROHM purchased 1,282,051 shares of eMagin Common Stock at \$0.78 per share as well as warrants to purchase an additional 512,820 shares of Common Stock at a conversion price of \$0.85 per share for an investment of US \$1,000,000.

Item 6. Exhibits and Reports on Form 8-K

(a) Reports on Form 8-K

The Company filed nine reports on form 8-K during the quarter ended June 30, 2002. Information regarding the items reported on is as follows:

DATE OF REPORT -----	ITEM REPORTED ON -----
May 20, 2002	Disclosed that the company and Travelers amend their agreement; extends the maturity date and deletes the mandatory conversion.
May 31, 2002	Disclosed that Travelers and eMagin agreed to extend the maturity date of the Convertible Promissory Note from May 31, 2002 to June 5, 2002.
June 5, 2002	Disclosed that Travelers and eMagin agreed to extend the maturity date of the Convertible Promissory Note from June 5, 2002 to June 7, 2002.
June 10, 2002	Disclosed that Travelers and eMagin agreed to extend the maturity date of the Convertible Promissory Note from June 7, 2002 to June 14, 2002.
June 14, 2002	Disclosed that Travelers and eMagin agreed to extend the maturity date of the Convertible Promissory Note from June 14, 2002 to June 17, 2002.
June 17, 2002	Disclosed that Travelers and eMagin agreed to extend the maturity date of the Convertible Promissory Note from June 17, 2002 to June 21, 2002.
June 18, 2002	Disclosed that Travelers and eMagin agreed to extend the maturity date of the Convertible Promissory Note from June 21, 2002 to August 30, 2002.
