ANGLO SWISS RESOURCES COMMENCES EXPLORATION  
ON THE FRY INLET DIAMOND PROPERTY, LAC DE GRAS, NWT

Anglo Swiss Resources Inc. (TSX.V-ASW / OTCBB ASWRF) is pleased to announce that the 2006 exploration program has now commenced at the Company's Lac de Gras diamond properties. The initial field work consists of a detailed airborne geophysical survey of the eastern portion of the 91,856 acre Fry Inlet Property.

Fugro Airborne Surveys Corp. of Mississauga, Ontario, acting as contractor for Anglo Swiss Resources, is flying the survey with multi-channel electromagnetic and high-sensitivity magnetic sensors recording geophysical measurements approximately every 4 meters along the survey lines.

Fugro's modern geophysical survey equipment is mounted on an A-star AS350 helicopter equipped with a specialized GPS system to provide in-flight navigation control and specialized radio altimeters to record ground clearance to an accuracy of about 1 meter. The geophysical sensors are towed by the helicopter at a terrain clearance (altitude) of 30 meters. A total of 1,695 line-kilometers are to be flown during this survey along parallel flight lines spaced 100 meters apart.

This portion of Anglo Swiss Resources' Fry Inlet property contains the Company's LI-201 kimberlite, which was determined to be significantly diamondiferous during early stage exploration drilling performed in 1997 by Kennecott Canada Exploration Inc. The Company's 2006 program will re-evaluate the known diamondiferous kimberlite, idle since 1998, with state-of-the-art geophysical technology, not available in previous exploration periods. This program will also evaluate the remainder of the claim block for potential sources of anomalous kimberlite indicator minerals present locally.

The eastern portion of Anglo Swiss Resources' Fry Inlet property lies within the Corridor of Hope and the newly termed Ekati Trend, some 50 kilometers north of the milling plant site at the Ekati Diamond Mine. Anglo Swiss will continue to evaluate other diamond properties within the Lac de Gras/Slave Craton area that meet its acquisition criteria. Anglo Swiss is the majority holder of over 170,000 acres of claims of merit in under explored areas with unexplained kimberlite indicator mineral trains and/or kimberlite targets near known kimberlites and diamond mining operations.

In light of the close proximity to producing diamond mines, the presence of numerous diamondiferous kimberlites and kimberlite indicator minerals, management is of the opinion that these claims are highly prospective for the further discovery of diamonds. The Company controls 4 distinct properties of merit as it works towards establishing itself towards the corporate goal of discovering a diamond mine within the Lac de Gras region.

On behalf of the Board of Directors of

Anglo Swiss Resources Inc.,

(s) Len Danard
