News Release Dated July 19, 2006

ANGLO SWISS RESOURCES RETAINS DERRICK STRICKLAND, PGeo.

FOR DIAMOND EXPLORATION LAC DE GRAS, NWT

Anglo Swiss Resources Inc. (TSX.V-ASW / OTCBB ASWRF) is pleased to announce the appointment of Mr. Derrick Strickland PGeo. a qualified person as defined by National Instrument 43-101. Mr. Strickland will assist the Company's technical team in the planning and execution of the diamond exploration programs at the Company's Canadian properties, in the Northwest Territories (NWT).

Derrick holds an MBA and works as an independent geological consultant. Having worked throughout Canada, the United States, Japan and Mongolia, his career has spanned nearly 20 years. He has numerous years of diamond exploration experience, including seven years at Ashton Mining of Canada and most recently as the project manager of Peregrine Diamonds re-evaluation of the DO27 kimberlite located in the Lac De Gras area of the Northwest Territories. The Lac de Gras area is the center of the Canadian diamond producers.

The immediate exploration program is being prepared from the results of the initial 2006 airborne geophysical survey of the eastern portion of the 91,856 acre Fry Inlet Property, Lac de Gras, NWT. The Fry Inlet property is an option/joint venture between Anglo Swiss Resources (60%) and New Shoshoni Ventures (40%) (See N.R. June 25, 2005).

Fugro Airborne Surveys Corp. of Mississauga, Ontario, conducted the 1,695 line-kilometre survey during February and March of 2006 with multi-channel electromagnetic and high-sensitivity magnetic geophysical measurements taken along parallel flight lines (100 meters), every 4 meters along the survey lines.

A formal report of the results of the survey is now being finalized under Mr. Strickland's supervision and the Company expects to receive numerous potential drill targets for diamondiferous kimberlites for its summer drill program. This report has successfully identified numerous magnetic/electro-magnetic anomalies with characteristics similar to the geophysical signatures generated by known kimberlites in the area. This portion of the Fry Inlet Diamond property contains the LI-201 kimberlite, which was determined to be significantly diamondiferous during early stage exploration drilling performed in 1997 by Kennecott Canada Exploration Inc.

More importantly, the anomalies occur in a cluster-like assemblage near the major regional NW dyke swarm which transects the Lac de Gras region and lie within the Corridor of Hope the host area to Canada's first two diamond mines.

The Company has a majority interest in 4 distinct properties of merit covering over 170,000 acres as it works towards establishing itself towards the discovery of the next diamond mine within the Lac de Gras region of the NWT. In light of the close proximity to producing diamond mines, the presence of numerous diamondiferous kimberlites and kimberlite indicator minerals, management is of the opinion that these claims are highly prospective for the further discovery of diamonds.

The Company has approved the grant of 525,000 incentive stock options for the duration of Mr. Strickland's association with the Company exercisable at 10 cents per share for a maximum period of five years; subject to regulatory approvals and vesting provisions of the Company's Stock Option Plan.

On behalf of the Board of Directors of

Anglo Swiss Resources Inc.,

(s) Len Danard

THE COMPANY RELIES ON LITIGATION PROTECTION FOR FORWARD LOOKING STATEMENTS.
