FORM 10-Q

Quarterly Report Pursuant To Section 13 or 15(d)
of the Securities Exchange Act of 1934

For the Quarterly Period Ended June 30, 2009

or

Transition Report Pursuant to Section 13 or 15(d)
of the Securities Exchange Act of 1934

Commission File No. 000-52710

THE BANK OF NEW YORK MELLON CORPORATION

(Exact name of registrant as specified in its charter)

Delaware
*(State or other jurisdiction of
incorporation or organization)*

13-2614959
(I.R.S. Employer Identification No.)

One Wall Street

New York, New York 10286

(Address of principal executive offices)(Zip Code)

Registrant's telephone number, including area code (212) 495-1784

Edgar Filing: Bank of New York Mellon CORP - Form 10-Q

Indicate by check mark whether the registrant (1) has filed all reports required to be filed by Section 13 or 15(d) of the Securities Exchange Act of 1934 during the preceding 12 months (or for such shorter period that the registrant was required to file such reports), and (2) has been subject to such filing requirements for the past 90 days.

Yes No

Indicate by check mark whether the registrant has submitted electronically and posted on its corporate Web site, if any, every Interactive Data File required to be submitted and posted pursuant to Rule 405 of Regulation S-T during the preceding 12 months (or for such shorter period that the registrant was required to submit and post such files).

Yes No

Indicate by check mark whether the registrant is a large accelerated filer, an accelerated filer, a non-accelerated filer, or a smaller reporting company. See the definitions of large accelerated filer, accelerated filer and smaller reporting company in Rule 12b-2 of the Exchange Act.

Large accelerated filer

Accelerated filer

Non-accelerated filer (Do not check if a smaller reporting company)

Smaller reporting company

Indicate by check mark whether the registrant is a shell company (as defined in Rule 12b-2 of the Exchange Act). Yes No

Indicate the number of shares outstanding of each of the issuer's classes of common stock, as of the latest practicable date.

Class	Outstanding as of June 30, 2009
Common Stock, \$0.01 par value	1,202,827,735

(a) Return on common equity on a net income basis was 2.7% for the second quarter of 2009, 5.2% for the first quarter of 2009, 4.4% for the second quarter of 2008, 3.9% for the first six months of 2009 and 7.3% for the first six months of 2008. Return on average assets on a net income basis was 0.34% for the second quarter of 2009, 0.59% for the first quarter of 2009, 0.63% for the second quarter of 2008, 0.47% for the first six months of 2009 and 1.07% for the first six months of 2008. Return on average assets was calculated on a continuing operations basis even though the prior period balance sheets, in accordance with GAAP, have not been restated for discontinued operations.

(b) See Supplemental Information beginning on page 59 for a calculation of these ratios.

(c) Excluding the SILO charge, the percent of non-U.S. fee and net interest revenue was 33% for both the quarter and six months ended June 30, 2008, respectively, and the net interest margin was 2.17% and 2.13% for the quarter and six months ended June 30, 2008, respectively.

(d) Prior period calculated on a continuing operations basis, even though the balance sheet, in accordance with GAAP, is not restated for discontinued operations.

(e) Represents the securities on loan, both cash and non-cash, managed by the Asset Servicing segment.

(f) Includes discontinued operations.

(g) The Tier 1 capital ratio, excluding the TARP preferred stock, was 11.2% at March 31, 2009.

(h) Excludes the impact of discontinued operations.

Part I Financial Information

Items 2. and 3. Management's Discussion and Analysis of Financial Condition and Results of Operations; Quantitative and Qualitative Disclosures about Market Risk

General

In this Quarterly Report on Form 10-Q, references to our, we, us, the Company, and similar terms refer to The Bank of New York Mellon Corporation.

Certain business terms used in this document are defined in the glossary included in our 2008 Annual Report on Form 10-K.

The following should be read in conjunction with the Consolidated Financial Statements included in this report. Investors should also read the section entitled Forward-looking Statements.

How we reported results

All information in this Quarterly Report on Form 10-Q is reported on a continuing operations basis, unless otherwise noted. For a description of discontinued operations, see Note 4 to the Notes to Consolidated Financial Statements.

Throughout this Form 10-Q, certain measures, which are noted, exclude certain items. The Company believes that these measures are useful to investors because they permit a focus on period-to-period comparisons which relate to the ability of the Company to enhance revenues and limit expenses in circumstances where such matters are within the Company's control. The excluded items in general relate to situations where accounting/regulatory requirements require charges unrelated to operational initiatives. We also present certain amounts on a fully taxable equivalent (FTE) basis. We believe that this presentation allows for comparison of amounts arising from both taxable and tax-exempt sources and is consistent with industry practice. The adjustment to an FTE basis has no impact on net income. See the Supplemental information Explanation of Non-GAAP financial measures beginning on page 59 for a reconciliation of amounts presented in accordance with GAAP to adjusted Non-GAAP amounts.

In the first quarter of 2009, we adopted Financial Accounting Standards Board (FASB) Staff Position No. 115-2 and FASB 124-2 (SFAS 115-2) (ASC 320-10) Recognition and Presentation of

Other-Than-Temporary Impairments and FASB Staff Position No. 157-4 (SFAS 157-4) (ASC 820-10), Determining Fair Value When the Volume and Level of Activity for the Asset or Liability Have Significantly Decreased and Identifying Transactions That Are Not Orderly . The impact of adopting SFAS 115-2 (ASC 320-10) and SFAS 157-4 (ASC 820-10) is discussed in Critical Accounting Estimates and Notes 5 and 16 to the Notes to Consolidated Financial Statements.

Overview

The Bank of New York Mellon Corporation (NYSE symbol: BK) is a global leader in providing a comprehensive array of services that enable institutions and individuals to manage and service their financial assets in more than 100 markets worldwide. We strive to be the global provider of choice for asset and wealth management and institutional services and be recognized for our broad and deep capabilities, superior client service and consistent outperformance versus peers. Our global client base consists of financial institutions, corporations, government agencies, endowments and foundations and high-net-worth individuals. At June 30, 2009, we had \$20.7 trillion in assets under custody and administration,

Edgar Filing: Bank of New York Mellon CORP - Form 10-Q

\$926 billion in assets under management, serviced \$11.8 trillion in outstanding debt and, on average, processed \$1.8 trillion global payments per day.

The Company's businesses benefit during periods of global growth in financial assets and concentration of wealth, and also benefit from the globalization of the investment process. Over the long term, our financial goals are focused on deploying capital to accelerate the long-term growth of our businesses and on achieving superior total returns to shareholders by generating first quartile earnings per share growth over time relative to a group of peer companies.

Key components of our strategy include: providing superior client service versus peers (as measured through independent surveys); strong investment performance (relative to investment benchmarks); above median revenue growth (relative to peer

Table of Contents

companies for each of our businesses); an increasing percentage of revenue and income derived from outside the U.S.; successful integration of acquisitions; competitive margins and positive operating leverage. We have established Tier 1 capital as our principal capital measure and have established a targeted minimum ratio of Tier 1 capital to risk-weighted assets of 10%.

Second quarter 2009 events

Repurchased preferred stock and warrant related to TARP

In June 2009, the Company repurchased the 3 million shares of its Series B preferred stock issued to the U.S. Treasury in October 2008 as part of the Troubled Asset Relief Program (TARP) Capital Purchase Program. The Company paid the U.S. Treasury \$3.0 billion, which reflects the liquidation value of the preferred stock.

The Company recorded an after-tax redemption charge of \$196.5 million in the second quarter of 2009 related to the repurchase of the preferred stock issued to the Treasury as part of TARP. During the second quarter, the Company also recorded \$39.8 million for the final dividend/accretion on the Series B preferred stock. The repurchase premium and preferred stock dividends/accretion reduced earnings per common share by \$0.23 in the second quarter of 2009.

On Aug. 5, 2009, the Company repurchased the warrant issued to the U.S. Treasury in connection with the TARP Capital Purchase Program. The repurchase price was \$136 million.

Common stock and senior debt offerings

In the second quarter of 2009, the Company issued 48 million common shares, at a weighted-average price of \$28.75 per common share, for a total of \$1.4 billion. In addition to the common stock offering, the Company issued \$1.5 billion of non-guaranteed senior debt comprised of \$1.0 billion of 5-year notes and \$500 million of 10-year notes. The proceeds from the equity and debt offerings were used for general corporate purposes, which included funding the repurchase of the preferred stock related to TARP.

Regulatory stress test

On May 7, 2009, the regulators released the results of the stress test administered under the Supervisory Capital Assessment Program conducted during the first quarter of 2009. The results concluded that the Company was not required to raise additional capital, and under the test's adverse scenario our capital ratios strengthened further.

Special FDIC assessment on insured depository institutions

In the second quarter of 2009, the Company recorded a special emergency deposit assessment of 5 basis points on each FDIC-insured depository institution's total assets, minus its Tier 1 capital, as of June 30, 2009 subject to a cap of 10 basis points of average assessable domestic deposits for the second quarter of 2009. The special assessment resulted in a charge of \$61 million (pre-tax), or \$0.03 per common share and was recorded as other expense. The special assessment will be used by the FDIC to rebuild the Deposit Insurance Fund and help maintain public confidence in the banking system.

Discontinued operations

In July 2009, we announced an agreement to sell Mellon United National Bank (MUNB) located in Florida. As a result, we adopted discontinued operations accounting for MUNB. This business no longer fits our strategic focus on our asset management and securities servicing businesses. The business was formerly included in the Other segment. The transaction is subject to regulatory approvals and is expected to close by the first quarter of 2010.

The income statements for all periods in this Form 10-Q have been restated to reflect the discontinued operations treatment of MUNB. The restatement resulted in a reduction to previously reported levels of net interest revenue and the net interest margin; a slight reduction in both treasury services and other fee revenue; a reduction in the provision for credit losses; a reduction in noninterest expense; and a change in continuing earnings per share.

Table of Contents

Highlights of second quarter 2009 results

We reported continuing net income applicable to the common shareholders of The Bank of New York Mellon Corporation of \$267 million and diluted earnings per common share of \$0.23 in the second quarter of 2009, compared with \$303 million, or diluted earnings per common share of \$0.26, in the second quarter of 2008 and \$363 million, or diluted earnings per common share of \$0.31, in the first quarter of 2009.

Net income applicable to common shareholders, including discontinued operations, totaled \$176 million, or \$0.15 per diluted common share, in the second quarter of 2009, compared with \$309 million, or \$0.27 per diluted common share, in the second quarter of 2008 and \$322 million, or \$0.28 per diluted common share, in the first quarter of 2009.

Results for the second quarter of 2009 reflect the following:

Investment write-downs of \$256 million (pre-tax), or \$0.14 per diluted common share primarily reflecting continued deterioration in the credit quality of residential mortgage-backed securities. (See Consolidated balance sheet review beginning on page 41);
An after-tax redemption charge of \$196.5 million related to the repurchase of the Series B preferred stock issued to the U.S. Treasury as part of the TARP Capital Purchase Program and \$39.8 million for the final dividend/accretion on the Series B preferred stock. These items decreased earnings per share by \$0.23 per diluted common share in the second quarter of 2009;
The special assessment imposed by the FDIC of \$61 million (pre-tax), or \$0.03 per diluted common share (See Noninterest expense beginning on page 16);
Merger and integration (M&I) expenses of \$59 million (pre-tax), or \$0.03 per diluted common share. (See Noninterest expense beginning on page 16); and
Tax benefits of \$134 million, or \$0.11 per diluted common share, primarily attributable to the final LILO/SILO tax settlement at an amount lower than originally recorded. (See Income taxes on page 17).

Highlights for the second quarter of 2009 include:

Assets under custody and administration totaled \$20.7 trillion at June 30, 2009 compared with \$23.0 trillion at June 30, 2008 and \$19.5 trillion at March 31, 2009. The year-over-year decrease reflects the impact of new business converted which was more than offset by lower market values, while the sequential increase primarily reflects the impact of new business converted and higher market values. (See the Institutional Services sector beginning on page 27).
Assets under management totaled \$926 billion at June 30, 2009 compared with \$1.1 trillion at June 30, 2008 and \$881 billion at March 31, 2009. The year-over-year decrease reflects the impact of market depreciation and net outflows, while the sequential increase primarily reflects the impact of market appreciation offset in part by long-term outflows. (See the Asset and Wealth Management sector beginning on page 22).
Securities lending assets stabilized at \$290 billion at June 30, 2009 compared with \$293 billion at March 31, 2009 and \$588 billion at June 30, 2008. (See Asset Servicing beginning on page 28).
Securities servicing revenue totaled \$1.293 billion compared with \$1.581 billion in the second quarter of 2008. Continued strong new business wins in our securities servicing businesses were more than offset by the impact of lower volumes and spreads associated with securities lending in asset servicing, lower market values and lower levels of fixed income issuances globally.
Securities lending fee revenue totaled \$97 million in the second quarter of 2009 compared with \$202 million in the second quarter of 2008. (See the Institutional Services sector beginning on page 27).
Asset and wealth management fees, including performance fees, totaled \$637 million in the second quarter of 2009 compared with \$860 million in the second quarter of 2008. The decrease reflects the global weakness in market values partially offset by higher performance fees. (See the Asset Management and Wealth Management segments beginning on page 24).
Foreign exchange and other trading activities revenue totaled \$237 million in the second quarter of 2009 compared with \$308 million in the second quarter of 2008. The decrease reflects lower trading revenue primarily due to the lower valuation of credit derivatives used to

Table of Contents

hedge the loan portfolio, lower capital markets related fees, as well as lower foreign exchange revenue driven by lower volumes. (See Fee and other revenue beginning on page 9).

Net interest revenue totaled \$700 million in the second quarter of 2009 compared with \$388 million in the second quarter of 2008.

The increase primarily reflects the SILO charge recorded in the second quarter of 2008. (See Net interest revenue beginning on page 12).

The provision for credit losses was \$61 million in the second quarter of 2009 compared with \$13 million in the second quarter of 2008. The increase primarily reflects continued deterioration in certain industry sectors. (See Asset quality and allowance for credit losses beginning on page 47).

Noninterest expense totaled \$2.4 billion in the second quarter of 2009 compared with \$2.7 billion in the second quarter of 2008. The decrease reflects lower staff expense, including lower incentives, as well as continued strong overall expense control. (See Noninterest expense beginning on page 16).

The unrealized net of tax loss on our available-for-sale securities portfolio was \$4.4 billion at June 30, 2009. The unrealized net of tax loss was \$4.5 billion at March 31, 2009 and \$1.8 billion at June 30, 2008. (See Consolidated balance sheet review beginning on page 41).

The Tier 1 capital ratio was 12.5% at June 30, 2009 compared with 13.8% at March 31, 2009 and 9.3 % at June 30, 2008. Excluding the Series B preferred stock, the Tier 1 capital ratio was 11.2% at March 31, 2009. The increase in the Tier 1 capital ratio year-over-year primarily reflects the common stock issuance in the second quarter of 2009 and earnings retention. (See Capital beginning on page 54).

Impact of the current market environment on our business

The following section discusses the impact of the current market environment on the Company's operations.

Impact on our business

Our Asset and Wealth Management businesses have been negatively impacted by global weakness in market values. The S&P 500 and the MSCI EAFE indices declined 28% and 34%, respectively, from

June 30, 2008, resulting in lower asset and wealth management fee revenue, and impacting performance fees and investment income related to seed capital investments.

Foreign exchange (FX) revenues returned to more normalized levels in the first half of 2009 from the record levels experienced in the fourth quarter of 2008, reflecting lower customer volumes and spreads.

Results in our securities lending business continue to be impacted by lower market valuations and spreads, as well as overall de-leveraging in the financial markets compared with 2008.

Market conditions continue to drive a lower volume of fixed income securities issuances globally, which has adversely impacted our Corporate Trust business.

The current low interest rate environment continues to adversely impact our net interest revenue and corresponding net interest margin and money market mutual fund related fees.

However, the market environment has also resulted in new opportunities for the Company, primarily through our Global Corporate Trust and Asset Servicing businesses. Among other things, these businesses continue to play a role in supporting governments' stabilization efforts in North America and Europe to bring liquidity back to the financial markets.

Securities write-downs

The Company adopted SFAS 115-2 (ASC 320-10) and SFAS 157-4 (ASC 820-10) effective Jan. 1, 2009. Adopting these staff positions impacted both impairment charges and the unrealized loss on the securities portfolio. The continued disruption in the fixed income securities market has resulted in additional impairment charges. In the second quarter of 2009, we recorded write-downs of \$256 million (pre-tax) reflecting the continued deterioration in credit quality of residential mortgage-backed securities. The unrealized loss on the securities portfolio was \$4.4 billion at June 30, 2009, compared with \$4.5 billion at March 31, 2009. The improvement in the net of tax loss on our securities portfolio reflects the tightening of spreads, partially offset by higher interest rates. See the Investment

securities discussion in Consolidated balance sheet review for additional information.

FDIC Temporary Liquidity Guarantee Program

In October 2008, the FDIC announced the Temporary Liquidity Guarantee Program (TLGP). This program, as amended by interim rules adopted in February and March 2009:

Guarantees certain types of senior unsecured debt issued by participating U.S. bank holding companies, U.S. savings and loan holding companies and FDIC-insured depository institutions between Oct. 14, 2008 and Oct. 31, 2009, including promissory notes, commercial paper and any unsecured portion of senior debt. Prepayment of debt not guaranteed by the FDIC and replacement with FDIC-guaranteed debt is not permitted. The amount of debt covered by the guarantee may not exceed 125% of the par value of the issuing entity's senior unsecured debt, excluding debt extended to affiliates or institution-affiliated parties, outstanding as of Sept. 30, 2008, that is scheduled to mature before June 30, 2009. In the first quarter of 2009, the Company issued approximately \$600 million of

FDIC-guaranteed debt under this program, which was the maximum amount of the debt permissible for it under the TLGP. The Company is obligated to pay to the FDIC an assessment fee at a rate of 100 basis points per annum on the aggregate principal amount of its FDIC-guaranteed debt.

Provides full FDIC deposit insurance coverage for funds held by participating FDIC-insured depository institutions in noninterest-bearing transaction deposit accounts (IDI) until Dec. 31, 2009. For such accounts, a 10 basis point surcharge on the depository institution's current assessment rate will be applied to deposits not otherwise covered by the existing deposit insurance limit of \$250,000. In the second quarter of 2009, the FDIC proposed an extension of this program until June 30, 2010. IDIs currently participating in the program would be given a one-time opportunity to opt-out of the program. IDIs that continue to participate in the program would be subject to increased fees (25 basis points versus the current 10 basis points). At June 30, 2009, \$29 billion of deposits with us were covered by the FDIC's TLGP.

(a) Includes securities lending revenue of \$97 million in the second quarter of 2009, \$90 million in the first quarter of 2009, \$202 million in the second quarter of 2008, \$187 million in the first six months of 2009 and \$447 million in the first six months of 2008.

(b) In the second quarter of 2009, global custodian out-of-pocket expense related to client reimbursements was reclassified from sub-custodian expense to asset servicing revenue. This reclassification totaled \$- million in the first quarter of 2009, \$10 million in the second quarter of 2008 and \$14 million in the first six months of 2008.

(c) Excluding investment write-downs and the second quarter 2008 SILO charge, fee and other revenue as a percentage of total revenue (FTE) was 78% in the second quarter of 2009, 76% in the first quarter of 2009, 80% in the second quarter of 2008, 77% in the first six months of 2009 and 80% in the first six months of 2008.

N/M Not meaningful.

Fee revenue

The results of many of our businesses are influenced by client and market activities that vary by quarter.

Fee revenue decreased 20% versus the year-ago quarter primarily due to decreases in asset and wealth management fees, asset servicing fees and foreign exchange and other trading activities. Sequentially, fee revenue increased 3% (unannualized) reflecting higher asset servicing fees, investment income, asset and wealth management fees, and treasury services fees, partially offset by a decrease in foreign exchange and other trading activities.

Securities servicing fees

Securities servicing fees were impacted by the following, compared with the second quarter of 2008 and first quarter of 2009:

Edgar Filing: Bank of New York Mellon CORP - Form 10-Q

Asset servicing fees Year-over-year results reflect the impact of continued strong new business wins which were more than offset by lower securities lending revenue and lower market values. The sequential increase primarily reflects the impact of new business, higher transaction volumes, higher market values and securities lending seasonality.

Issuer services fees The decrease compared with the second quarter of 2008 reflects lower Depositary Receipts revenue due to a decline in transaction fees and lower Corporate Trust fees due to a lower level of fixed income issuances globally and lower money market fees, partially offset by new business. The increase sequentially primarily reflects new business and seasonality related to shareowner services revenue, partially offset by a lower level of corporate actions in Depositary Receipts.

Clearing services fees Year-over-year results reflect higher trading volumes which were more than offset by lower money market related fees and lower asset valuations. The linked quarter decline was driven by lower money market related fees.

The Bank of New York Mellon Corporation 9

Table of Contents

See the Institutional Services sector in Business segments review for additional details.

Asset and wealth management fees

Asset and wealth management fees, including performance fees, decreased from the second quarter of 2008, reflecting global weakness in market values, partially offset by higher performance fees. The sequential increase reflects improved market values and higher performance fees. Both periods were impacted by lower fees related to money market and alternative asset classes.

Total AUM for the Asset and Wealth Management sector were \$926 billion at June 30, 2009 compared with \$881 billion at March 31, 2009 and \$1.1 trillion at June 30, 2008. The decrease compared with June 30, 2008 resulted from market depreciation as well as long-term outflows, including an outflow of \$14 billion related to the termination of a unique and very low fee relationship (less than 1 basis point annually). The increase compared with March 31, 2009 resulted from market appreciation, partially offset by long-term outflows, including the previously discussed termination. The S&P 500 Index was 919 at June 30, 2009 compared with 798 at March 31, 2009 (a 15% increase) and 1280 at June 30, 2008 (a 28% decrease).

See the Asset and Wealth Management sector in Business segments review for additional details regarding the drivers of asset and wealth management fees.

Foreign exchange and other trading activities

Foreign exchange and other trading activities revenue, which is primarily reported in the Asset Servicing segment, decreased 23% compared with the second quarter of 2008, and 23% (unannualized) compared with the first quarter of 2009. The decrease compared with both periods reflects lower trading revenue primarily due to the lower valuation of credit derivatives used to hedge the loan portfolio. The year-over-year comparison also reflects lower foreign exchange revenue driven by lower volumes, partially offset by higher volatility, while sequentially, higher foreign exchange revenue was driven by higher volumes.

Treasury services

Treasury services fees, which are primarily reported in the Treasury Services segment, include fees related to funds transfer, cash management and liquidity management. Treasury services fees increased \$3 million compared with the second quarter of 2008 and increased \$7 million compared with the first quarter of 2009. The increases were driven by higher global payment fees.

Distribution and servicing fees

Distribution and servicing fees earned from mutual funds are primarily based on average assets in the funds and the sales of funds that we manage or administer and are primarily reported in the Asset Management segment. These fees, which include 12b-1 fees, fluctuate with the overall level of net sales, the relative mix of sales between share classes and the funds' market values.

Distribution and servicing fee revenue decreased \$3 million compared with the second quarter of 2008 and \$4 million compared with the first quarter of 2009. These decreases primarily reflect higher redemptions in prior periods. The impact of these fees on income in any one period can be more than offset by distribution and servicing expense paid to other financial intermediaries to cover their cost for distribution and servicing of mutual funds. Distribution and servicing expense is recorded as noninterest expense on the income statement.

Financing-related fees

Financing-related fees, which are primarily reported in the Treasury Services segment, include capital markets fees, loan commitment fees and credit-related trade fees. Financing-related fees increased \$3 million compared with the second quarter of 2008 and \$6 million sequentially. The increase sequentially reflected higher fees on capital market products.

Table of Contents*Investment income*

Investment income <i>(in millions)</i>	2Q09	1Q09	2Q08	Year-to-date	
				2009	2008
Corporate/bank-owned life insurance	\$ 31	\$ 41	\$ 39	\$ 72	\$ 74

Equity investment income (loss)	13	(54)	17	(41)	34
Total investment income	\$ 44	\$ (17)	\$ 74	\$ 27	\$ 115

Investment income, which is primarily reported in the Other and Asset Management segments, includes income from insurance contracts, lease residual gains and losses, gains and losses on seed capital investments and private equity investments and equity investment revenue. The decrease compared with the second quarter of 2008 primarily reflects losses on leases of \$10 million in the second quarter of 2009 compared with gains of \$12 million in the second quarter of 2008. The decrease from the second quarter of 2008 also reflects a loss on private equity investments of \$9 million in the second quarter of 2009 compared with revenue of \$3 million in the second quarter of 2008, partially offset by higher seed capital gains. The increase compared to the first quarter of 2009 primarily related to the write-down of certain equity investments in the first quarter of 2009 and higher seed capital gains in the first quarter of 2009, partially offset by losses on leases in the second quarter of 2009.

Other revenue

Other revenue <i>(in millions)</i>	2Q09	1Q09	2Q08	Year-to-date	
				2009	2008
Asset-related gains (losses)	\$ 16	\$ 6	\$ 13	\$ 22	\$ 59
Expense reimbursements from joint ventures	7	8	8	15	12
Other income (loss)	(14)	1	7	(13)	39
Total other revenue	\$ 9	\$ 15	\$ 28	\$ 24	\$ 110

Other revenue includes asset-related gains (losses), expense reimbursements from joint ventures and other. Asset-related gains (losses) include loan, real estate and other asset dispositions. Expense reimbursements from joint ventures relate to expenses incurred by the Company on behalf of joint ventures. Other primarily includes foreign currency translation gains, other investments and various miscellaneous revenues.

Net securities gains (losses)

Net securities portfolio losses totaled \$256 million in the second quarter of 2009, compared with losses of \$152 million in the second quarter of 2008 and losses of \$295 million in the first quarter of 2009.

The following table details securities write-downs by type of security. These write-downs primarily reflect continued deterioration in the credit quality of residential mortgage-backed securities. See Consolidated balance sheet review for further information on the investment portfolio.

As a result of adopting SFAS 115-2 (ASC 320-10), securities write-downs in the second and first quarters of 2009 primarily reflect credit related losses. Securities write-downs in the second quarter of 2008 reflect mark-to-market (both credit and non-credit) impairment write-downs.

Total net securities losses (impairment charges)	\$ 256	\$ 295	\$ 152	\$ 551	\$ 225

^(a) Includes \$95 million resulting from the adverse impact of low interest rates on a structured tax investment and \$37 million of seed capital write-downs. Year-to-date 2009 compared with year-to-date 2008

Fee and other revenue for the first six months of 2009 totaled \$4.4 billion, a 26% decrease compared with the first six months of 2008. The decrease primarily reflects decreases in asset servicing fees, asset and wealth management fees, investment income, other revenue and higher securities write-downs.

The decrease in asset servicing fees primarily reflects lower securities lending revenue, lower market values and transaction volumes. The decrease in asset and wealth management fees reflects the global weakness in market values. The decrease in investment income primarily reflects the write-down of certain equity investments recorded in the first quarter of 2009. The decrease in other

The Bank of New York Mellon Corporation 11

Table of Contents

revenue reflects the \$42 million gain related to the initial public offering of VISA recorded in the first six months of 2008. The increase in securities write-downs primarily reflects the continued deterioration in the credit quality of residential mortgage-backed securities.

Net interest revenue

Net interest revenue (dollars in millions)	2Q09	1Q09	2Q08	2Q09 vs.		Year-to-date		YTD09 vs. YTD08
				2Q08	1Q09	2009	2008	
Net interest revenue (non-FTE)	\$ 700	\$ 775	\$ 388	80%	(10)%	\$ 1,475	\$ 1,131	30%
Tax equivalent adjustment	4	4	4	N/M	N/M	8	10	N/M
Net interest revenue (FTE)	704	779	392	80	(10)	1,483	1,141	30%
SILO charge	-	-	377	N/M	N/M	-	377	N/M
Net interest revenue excluding SILO charge (FTE) non-GAAP	\$ 704	\$ 779	\$ 769	(8)%	(10)%	\$ 1,483	\$ 1,518	(2)%
Average interest earning assets	\$ 157,265	\$ 167,427	\$ 142,032	11%	(6)%	\$ 162,318	\$ 142,447	14%
Net interest margin (FTE)	1.80%	1.87%	1.11%	69 bps	(7) bps	1.84%	1.61%	23 bps
Net interest margin excluding SILO charge (FTE) non-GAAP	1.80	1.87	2.17	(37) bps	(7) bps	1.84	2.13	(29) bps

N/M Not meaningful.
bps basis points.

Net interest revenue on an FTE basis totaled \$704 million in the second quarter of 2009 compared with \$392 million in the second quarter of 2008, which included a \$377 million charge related to SILOs, and \$779 million in the first quarter of 2009. The net interest margin was 1.80% in the second quarter of 2009, compared with 1.11% in the second quarter of 2008 and 1.87% in the first quarter of 2009. Net interest revenue and the related margin continued to be influenced by historically low interest rates, the return of the balance sheet to expected levels and our strategy to reinvest in high quality, longer duration assets.

The increase in net interest revenue compared with the second quarter of 2008 principally reflects the SILO charge recorded in the second quarter of 2008. Excluding the SILO charge, the decrease compared with the second quarter of 2008 reflects a decline in the value of interest free balances, offset in part by an increase in interest-earning assets. The decrease in net interest revenue compared with the first quarter of 2009 primarily reflects a decline in average interest earning assets resulting from a continued roll-off of deposits taken in from customers that sought a safe haven during the credit crisis, coupled with a decrease in the value and volume of interest free funds.

Average interest-earning assets were \$157 billion in the second quarter of 2009 compared with \$142 billion in the second quarter of 2008 and \$167 billion in the first quarter of 2009. The increase compared with the second quarter of 2008 was primarily driven by client cash that sought a safe haven during the credit crisis. The decrease from the first quarter of 2009 reflects continued roll-off of deposits taken in during the credit crisis.

The net interest margin increased 69 basis points in the second quarter of 2009 compared with the second quarter of 2008 primarily due to the SILO charge. Excluding the SILO charge, the net interest margin in the second quarter of 2008 was 2.17%. The decrease of 37 basis points compared with the second quarter of 2008, excluding the SILO charge, was primarily due to lower spreads and a decline in the value of interest free balances. Sequentially, the net interest margin stabilized as a result of our decision to reduce cash held at the central banks and invest in securities issued by government-sponsored and guaranteed entities with a duration of approximately 2-4 years.

Average cash and interbank investments comprised 42% of average interest-earning assets in the second

12 The Bank of New York Mellon Corporation

Table of Contents

quarter of 2009 compared with 50% in the first quarter of 2009.

Year-to-date 2009 compared with year-to-date 2008

Net interest revenue on an FTE basis totaled \$1.5 billion in the first six months of 2009, an increase of 30% compared with \$1.1 billion in the first six months of 2008. The increase primarily related to the second quarter 2008 SILO charge. Excluding the SILO charge, net interest revenue decreased 2% in the first six months of 2009 compared with the first six months of 2008. The net interest margin was 1.84% in the first six months of 2009 and 1.61% in the first six months of 2008. The increase in the net interest margin was primarily due to the SILO charge. Excluding the SILO charge, the net interest margin was 2.13% in the first six months of 2008. The decreases in net interest revenue and the net interest margin compared with the first half of 2008, excluding the SILO charge, were primarily due to the factors mentioned above.

- (a) *Presented on a continuing operations basis even though the balance sheet is not restated for discontinued operations.*
- (b) *Year-to-date 2008 includes the impact of the SILO charge. Excluding this charge, the domestic offices non-margin loan rate would have been 4.05%, the total non-margin loan rate would have been 4.12%, the interest-earning assets rate would have been 4.33% and the net interest margin would have been 2.13% for the first half of 2008.*

Note: Interest and average rates were calculated on a taxable equivalent basis, at tax rates approximating 35%, using dollar amounts in thousands and actual number of days in the year.

^(a) In the second quarter of 2009, certain temporary/consulting expenses were reclassified from professional, legal and other purchased services to staff expense. This reclassification totaled \$24 million in the first quarter of 2009, \$19 million in the second quarter of 2008 and \$32 million in the first six months of 2008.

^(b) In the second quarter of 2009, global sub-custodian out-of-pocket expense related to client reimbursements was reclassified from sub-custodian expense to asset servicing revenue. This reclassification totaled \$- million in the first quarter of 2009, \$10 million in the second quarter of 2008 and \$14 million in the first six months of 2008.

N/M Not meaningful.

Total noninterest expense decreased \$360 million compared with the second quarter of 2008 and increased \$103 million compared with the first quarter of 2009. The year-over-year decrease reflects strong overall expense control. The sequential increase reflects lower staff expense which was more than offset by higher sub-custodian and clearing expenses, software expenses and a reserve for remediation of withholding tax documentation.

Staff expense

Given our mix of fee-based businesses, which are staffed with high quality professionals, staff expense comprised approximately 54% of total noninterest expense, excluding the FDIC special assessment, intangible amortization and M&I expenses.

Staff expense is comprised of:

compensation expense, which includes:

Edgar Filing: Bank of New York Mellon CORP - Form 10-Q

base salary expense, primarily driven by headcount;
the cost of temporary help and overtime; and
severance expense;
incentive expense, which includes:
additional compensation earned under a wide range of sales commission and incentive plans designed to reward a combination of
individual, business unit and corporate performance goals; as well as
stock-based compensation expense; and
employee benefit expense, primarily medical benefits, payroll taxes, pension and other retirement benefits.

Table of Contents

The decrease in staff expense compared with the second quarter of 2008 was driven by lower compensation, incentives and employee benefits and the continuing effect of merger-related synergies. The decrease sequentially resulted from lower employee benefits and incentive expenses partially offset by higher compensation expense.

Non-staff expense

Non-staff expense includes certain expenses that vary with the levels of business activity and levels of expensed business investments, fixed infrastructure costs and expenses associated with corporate activities related to technology, compliance, productivity initiatives and corporate development.

Non-staff expense excluding the FDIC special assessment, intangible amortization and M&I expenses totaled \$1.0 billion in the second quarter of 2009 compared with \$1.1 billion in the second quarter of 2008 and \$936 million in the first quarter of 2009.

The decrease in non-staff expense compared with the second quarter of 2008 primarily reflects decreases in distribution and servicing, business development and professional, legal and other purchased services expenses. The increase in non-staff expense sequentially reflects higher sub-custodian and clearing expenses, software expenses and a reserve for the remediation of withholding tax documentation.

In the second quarter of 2009, we incurred \$59 million of M&I expenses related to the merger with Mellon Financial Corporation, comprised of the following:

- Integration/conversion costs including consulting, system conversions and staff (\$42 million);
- Personnel related including severance, retention, relocation expenses, accelerated vesting of stock options and restricted stock expense (\$13 million); and
- One-time costs including facilities related costs, asset write-offs, vendor contract modifications, rebranding and net gain (loss) on disposals (\$4 million).

Year-to-date 2009 compared with year-to-date 2008

Noninterest expense in the first six months of 2009 decreased \$682 million, or 13%, compared with the first six months of 2008. The decrease primarily reflects declines in staff expense, distribution and servicing expense and business development expense driven by strong expense management in response to the operating environment and the continued impact of merger-related synergies. These decreases were partially offset by higher net occupancy and software expenses.

Income taxes

The effective tax rate for the second quarter of 2009 was 2.2% on a continuing operation basis compared with 50.3% in the second quarter of 2008 and 28.2% in the first quarter of 2009. In the second quarter of 2009, the Company recognized \$134 million, or \$0.11 per common share of tax benefits primarily attributable to the final LILO/SILO tax settlement agreement at an amount less than originally recorded. Results for the second quarter of 2009 included the FDIC special assessment, M&I expenses and investment write-downs. Excluding the impact of these items as well as the tax benefit, the effective tax rate was 32.4% in the second quarter of 2009. Excluding the impact of M&I expenses, investment write-downs and the second quarter 2008 SILO charge, the effective tax was 33.1% in the second quarter of 2008 and 32.1% in the first quarter of 2009.

Business segments review

We have an internal information system that produces performance data for our seven business segments along product and service lines.

Business segments accounting principles

Our segment data has been determined on an internal management basis of accounting, rather than the generally accepted accounting principles used for consolidated financial reporting. These measurement principles are designed so that reported results of the segments will track their economic performance.

Edgar Filing: Bank of New York Mellon CORP - Form 10-Q

Segment results are subject to reclassification whenever improvements are made in the measurement principles or when organizational changes are made.

The Bank of New York Mellon Corporation 17

Table of Contents

The accounting policies of the business segments are the same as those described in Note 1 to the Consolidated Financial Statements in the Company's 2008 Annual Report on Form 10-K, except that other fee revenue and net interest revenue differ from the amounts shown in the Consolidated Income Statement because amounts presented in Business segments are on an FTE basis.

In the second quarter of 2009, the financial results of MUNB were moved from the Other segment into discontinued operations. Historical results in the Other segment have been restated.

The operations of acquired businesses are integrated with the existing business segments soon after most acquisitions are completed. As a result of the integration of staff support functions, management of customer relationships, operating processes and the financial impact of funding acquisitions, we cannot precisely determine the impact of acquisitions on income before taxes and therefore do not report it.

We provide segment data for seven segments, with certain segments combined into sector groupings as shown below.

Sector/Segment	Primary types of revenue
Asset and Wealth Management sector Asset Management segment	Asset and wealth management fees from: Mutual funds Institutional clients Private clients Performance fees
Wealth Management segment	Distribution and servicing fees Wealth management fees from high-net-worth individuals and families, family offices and business enterprises, charitable gift programs, and foundations and endowments
Institutional Services sector Asset Servicing segment	Asset servicing fees, including: Institutional trust and custody fees Broker-dealer services Securities lending
Issuer Services segment	Foreign exchange Issuer services fees, including: Corporate trust Depository receipts Employee investment plan services Shareowner services

Edgar Filing: Bank of New York Mellon CORP - Form 10-Q

Clearing Services segment	Clearing services fees, including broker-dealer and registered investment advisor services
Treasury Services segment	Treasury services fees, including: Global payment services Working capital solutions
Other segment	Financing-related fees Leasing operations Corporate treasury activities Global markets and institutional banking services Business exits M&I expenses

Business segment information is reported on a continuing operations basis for all periods presented. See Note 4 to the Notes to Consolidated Financial Statements for a discussion of discontinued operations.

The results of our business segments are presented and analyzed on an internal management reporting basis:

Table of Contents

Revenue amounts reflect fee and other revenue generated by each segment. Fee and other revenue transferred between segments under revenue transfer agreements is included within other revenue in each segment.

Revenues and expenses associated with specific client bases are included in those segments. For example, foreign exchange activity associated with clients using custody products is allocated to the Asset Servicing segment.

Net interest revenue is allocated to segments based on the yields on the assets and liabilities generated by each segment. We employ a funds transfer pricing system that matches funds with the specific assets and liabilities of each segment based on their interest sensitivity and maturity characteristics.

The measure of revenues and pre-tax profit or loss by a segment has been adjusted to present segment data on an FTE basis.

Support and other indirect expenses are allocated to segments based on internally-developed methodologies.

The FDIC special emergency deposit assessment is considered a corporate charge and was therefore recorded in the Other segment.

Recurring FDIC expense is allocated to segments based on average deposits generated within each segment.

Support agreement charges are recorded in the segment in which the charges occurred.

Restructuring charges are a result of corporate initiatives and therefore are recorded in the Other segment.

Balance sheet assets and liabilities and their related income or expense are specifically assigned to each segment. Segments with a net liability position have been allocated assets.

Goodwill and intangible assets are reflected within individual business segments.

Our business segments continued to face a difficult operating environment in the second quarter of 2009. Equity markets were down significantly year-over-year partially offset by new business. On a sequential basis, improved equity markets and new business contributed to improved fee revenue. Net interest revenue decreased in nearly every segment compared with the first quarter of 2009 and was relatively flat compared with the second quarter of 2008. The decrease sequentially reflects a decline in average interest-earning assets resulting from a continued roll-off of deposits taken in during the credit crisis. Net interest revenue in the second quarter of 2008 includes a SILO charge of \$377 million which was recorded in the Other segment. Strong expense control and the impact of merger-related synergies resulted in lower noninterest expense in every segment compared with the second quarter of 2008. Noninterest expense increased sequentially primarily reflecting higher sub-custodian and clearing expenses, software expenses and FDIC expense.

The table below presents the value of certain market indices at period end and on an average basis.

Market indices

	2Q09 vs.		Year-to-date		YTD09		vs.		YTD08	
	2Q08	3Q08	4Q08	1Q09	2Q09	2Q08	1Q09	2009	2008	YTD08

S&P 500 Index-daily average	1371	1252	916	809	891	(35)	10	851	1362	(38)
FTSE 100 Index ^(a)	5626	4902	4434	3926	4249	(24)	8	4249	5626	(24)
FTSE 100 Index-daily average	5979	5359	4270	4040	4258	(29)	5	4149	5937	(30)
NASDAQ Composite Index ^(a)	2293	2092	1577	1529	1835	(20)	20	1835	2293	(20)
Lehman Brothers Aggregate Bond sm Index ^(a)	270	256	275	262	280	4	7	280	270	4
MSCI EAFE [®] Index ^(a)	1967	1553	1237	1056	1307	(34)	24	1307	1967	(34)
NYSE Share Volume <i>(in billions)</i>	141	180	181	161	151	7	(6)	312	299	4
NASDAQ Share Volume <i>(in billions)</i>	135	145	148	136	152	13	12	288	284	1

^(a) Period end.

Average daily U.S. fixed-income trading volume was down 2%

sequentially and 22% year-over-year. Total debt issuances were flat sequentially and up 4% year-over-year.

Table of Contents

The period end S&P 500 Index increased 15% sequentially and decreased 28% year-over-year. The period end FTSE 100 Index increased 8% sequentially and decreased 24% year-over-year. On a daily average basis, the S&P 500 Index increased 10% sequentially and decreased 35% year-over-year and the FTSE 100 Index increased 5% sequentially and decreased 29% year-over-year. The period end NASDAQ Composite Index increased 20% sequentially and decreased 20% year-over-year.

The changes in the value of market indices impact fee revenue in the Asset and Wealth Management segments and our

securities servicing businesses. Using the S&P 500 Index as a proxy for the equity markets, we estimate that a 100 point change in the value of the S&P 500 Index, sustained for one year, would impact fee revenue by approximately 1% and fully diluted earnings per common share on a continuing operations basis by \$0.05.

The following consolidating schedules show the contribution of our segments to our overall profitability.

Asset and Wealth Management Sector

Asset and Wealth Management fee revenue is dependent on the overall level and mix of AUM and the management fees expressed in basis points (one-hundredth of one percent) charged for managing those assets. Assets under management were \$926 billion at June 30, 2009, compared with

\$881 billion at March 31, 2009, and \$1.1 trillion at June 30, 2008. Net asset outflows in the second quarter of 2009 totaled \$19 billion, primarily reflecting an outflow of \$14 billion related to the termination of a unique and very low fee relationship (less than 1 basis point annually), as well as money market outflows.

N/M Not meaningful.

Business description

BNY Mellon Asset Management is the umbrella organization for our affiliated investment management boutiques and is responsible, through various subsidiaries, for U.S. and non-U.S. retail, intermediary and institutional distribution of investment management and related services. The investment management boutiques offer a broad range of equity, fixed income, cash and alternative/overlay products. In addition to the investment subsidiaries, BNY Mellon Asset Management includes BNY Mellon Asset Management International, which is responsible for the distribution of investment management products internationally, and the Dreyfus Corporation and its affiliates, which are responsible for U.S. distribution of retail mutual funds, separate accounts and annuities.

Edgar Filing: Bank of New York Mellon CORP - Form 10-Q

We are one of the world's largest asset managers with a top 10 position in both the U.S. and Europe and top 15 globally.

The results of the Asset Management segment are mainly driven by the period end and average levels of assets managed as well as the mix of those assets, as previously shown. Results for this segment are also impacted by sales of fee-based products such as fixed and variable annuities and separately managed accounts. In addition, performance fees may be generated when the investment performance exceeds various benchmarks and satisfies other criteria. Expenses in this segment are mainly driven by staffing costs, incentives, distribution and servicing expense, and product distribution costs.

Table of Contents

Review of financial results

In the second quarter of 2009, Asset Management had pre-tax income of \$64 million compared with \$206 million in the second quarter of 2008 and \$42 million in the first quarter of 2009. Excluding amortization of intangible assets, pre-tax income was \$119 million in the second quarter of 2009 compared with \$274 million in the second quarter of 2008 and \$97 million in the first quarter of 2009. Year-over-year results reflect weakness in global equity market values, partially offset by strong expense control. Sequential results primarily reflect higher global equity market values.

Asset and wealth management revenue in the Asset Management segment was \$498 million in the second quarter of 2009 compared with \$693 million in the second quarter of 2008 and \$483 million in the first quarter of 2009. The year-over-year decrease reflects weakness in global equity market values as well as lower fees related to money market and alternative asset classes. The increase sequentially reflects an increase in global equity market values and higher performance fees, partially offset by lower fees related to money market and alternative asset classes.

In the second quarter of 2009, 53% of Asset and Wealth Management fees in the Asset Management segment were generated from managed mutual fund fees. These fees are based on the daily average net assets of each fund and the basis point management fee paid by that fund. Managed mutual fund fee revenue was \$266 million in the second quarter of 2009 compared with \$340 million in the second quarter of 2008 and \$263 million in the first quarter of 2009. The decrease year-over-year was primarily due to lower market values, partially offset by inflows in money market funds. The linked quarter increase reflects higher market values.

Distribution and servicing fees were \$90 million in the second quarter of 2009 compared with \$99 million in the second quarter of 2008 and \$92 million in the first quarter of 2009. The decreases from both prior periods primarily reflect lower redemptions in the current period.

Other fee revenue was a loss of \$59 million in the second quarter of 2009 compared with a gain of \$4 million in the second quarter of 2008 and a loss of \$96 million in the first quarter of 2009. The year-over-year decrease was primarily due to investment write-downs. The increase sequentially was primarily driven by improved seed capital values. Noninterest expense (excluding amortization of intangible assets and support agreement charges) was \$419 million in the second quarter of 2009 compared with \$528 million in the second quarter of 2008 and \$412 million in the first quarter of 2009. Ongoing expense management in response to the operating environment resulted in noninterest expense declining 21% year-over-year, reflecting staff reductions and lower incentive expenses. Noninterest expense (excluding intangible amortization and support agreement charges) increased only 2% (unannualized) sequentially resulting in 700 basis points of positive operating leverage. The sequential increase reflects higher incentive expenses driven by higher performance fees.

Year-to-date 2009 compared with year-to-date 2008

Income before taxes totaled \$106 million in the first six months of 2009 compared with \$354 million in the first six months of 2008. Income before taxes (excluding intangible amortization) was \$216 million in the first six months of 2009 compared with \$484 million in the first six months of 2008. Fee and other revenue decreased \$540 million, primarily due to lower global equity market values and outflows of alternative asset classes. Noninterest expense (excluding intangible amortization and support agreement charges) decreased \$254 million in the first six months of 2009 compared with the first six months of 2008, primarily due to ongoing expense management in response to the operating environment.

*N/M Not meaningful.**Business description*

In the Wealth Management segment, we offer a full array of investment management, wealth and estate planning and private banking solutions to help clients protect, grow and transfer their wealth. Clients include high net worth individuals and families, family offices and business enterprises, charitable gift programs, and endowments and foundations. BNY Mellon Wealth Management is a top 10 U.S. wealth manager with \$142 billion in client assets. We serve our clients through an expansive network of offices in 16 states and 3 countries.

The results of the Wealth Management segment are driven by the level and mix of assets managed and under custody, and the level of activity in client accounts. Net interest revenue is determined by the level of interest rate spread between loans and deposits. Expenses of this segment are driven mainly by staff expense in the investment management, sales, service and support groups.

Review of financial results

Income before taxes was \$43 million in the second quarter of 2009, compared with \$55 million in the second quarter of 2008 and \$52 million in the first quarter of 2009. Income before taxes, excluding intangible amortization, was \$54 million in the second quarter of 2009, compared with \$68 million in the second quarter of 2008 and \$63 million in the first quarter of 2009. Results in the second quarter of 2009 continue to reflect the benefit of business wins and market share gains, especially in the family office platform and northeast wealth markets, as evidenced by \$11

Edgar Filing: Bank of New York Mellon CORP - Form 10-Q

billion in net inflows of client assets over the last twelve months (\$2 billion in the second quarter of 2009) and 14 consecutive quarters of positive net client flows.

Total fee and other revenue was \$140 million in the second quarter of 2009, compared with \$161 million in the second quarter of 2008 and \$141 million in the first quarter of 2009. The decrease compared with

Table of Contents

the second quarter of 2008 reflects lower equity markets and lower capital market fees which more than offset organic growth. Sequentially, asset and wealth management fees were up 5% driven by organic growth and higher equity markets. Other revenue decreased \$7 million sequentially reflecting lower capital markets fees.

Net interest revenue was essentially flat year-over-year and sequentially. The year-over-year results reflect increased loan levels and loan spreads, partially offset by lower deposit levels. The linked quarter results reflect higher loan levels partially offset by declines in deposit levels and lower interest rates. Average loan levels were up \$868 million, or 18%, over the prior year period and \$296 million, or 5% (unannualized) sequentially.

Noninterest expense (excluding amortization of intangible assets and support agreement charges) decreased \$7 million compared with the second quarter of 2008 and increased \$7 million compared with the first quarter of 2009. The year-over-year decrease reflects continued strong expense control and the impact of merger-related synergies. On a linked quarter basis, savings due to workforce reductions were offset by increased FDIC expense and the timing of business development expenses.

Client assets under management and custody were \$142 billion at June 30, 2009, compared with \$162 billion at June 30, 2008 and \$132 billion at March 31, 2009. The year-over-year decrease reflects lower equity market levels, partially offset by new business. The sequential increase resulted from higher market levels and organic growth.

Year-to-date 2009 compared with year-to-date 2008

Income before taxes totaled \$95 million in the first six months of 2009 compared with \$112 million in the first six months of 2008. Excluding intangible amortization and support agreement charges, income before taxes decreased \$21 million. The \$46 million decrease in fee and other revenue reflects lower equity market levels which more than offset organic growth. The \$5 million increase in net interest revenue was primarily due to higher loan levels. Noninterest expense (excluding intangible amortization and support agreement charges) decreased \$21 million primarily reflecting strong expense control.

Institutional Services Sector

At June 30, 2009, our assets under custody and administration were \$20.7 trillion, a 6% increase from \$19.5 trillion at March 31, 2009 and a 10% decrease from \$23.0 trillion at June 30, 2008. The sequential increase reflects improved market levels and new business while the year-over-year decrease reflects lower market levels, partially offset by new business. Equity securities constituted 27% and fixed-income securities constituted 73% of the assets under custody and administration at June 30, 2009 compared with 25% equity securities and 75% fixed income securities at June 30, 2008. Assets under custody and administration at June 30, 2009 consisted of assets related to custody, mutual fund, and corporate trust businesses of \$16.9 trillion, broker-dealer service assets of \$2.5 trillion, and all other assets of \$1.3 trillion.

The market value of securities on loan at June 30, 2009 stabilized at \$290 billion compared with \$293 billion at March 31, 2009. The market value of securities on loan was \$588 billion at June 30, 2008. The year-over-year decline reflects overall de-leveraging in the financial markets and lower market valuations resulting from large declines in the equity markets.

Assets under custody and administration trend	June 30, 2008	Sept. 30, 2008	Dec. 31, 2008	March 31, 2009	June 30, 2009
Market value of assets under custody and administration <i>(in trillions)</i> ^(a)	\$ 23.0	\$ 22.4	\$ 20.2	\$ 19.5	\$ 20.7
Market value of securities on loan <i>(in billions)</i> ^(b)	\$ 588	\$ 470	\$ 326	\$ 293	\$ 290

^(a) Includes the assets under custody or administration of CIBC Mellon Global Securities Services Company, a joint venture with Canadian Imperial Bank of Commerce, of \$915 billion at June 30, 2008, \$811 billion at Sept. 30, 2008, \$697 billion at Dec. 31, 2008, \$690 billion at March 31, 2009 and \$810 billion at June 30, 2009.

^(b) Represents the total amount of securities on loan, both cash and non-cash, managed by the Asset Servicing segment.

N/M - Not meaningful.

Business description

Edgar Filing: Bank of New York Mellon CORP - Form 10-Q

The Asset Servicing segment includes global custody, global fund services, securities lending, global liquidity services, outsourcing, government securities clearance, collateral management and credit-related services and other linked revenues, principally foreign exchange. Clients include corporate and public retirement funds, foundations and endowments and global financial institutions including banks, broker-dealers, investment managers, insurance companies and mutual funds. The results of the Asset Servicing segment are driven by a number of factors which include the level of transactional activity, the extent of services provided, including custody, accounting, fund administration, daily valuations, performance measurement and risk analytics, securities lending, investment manager backoffice outsourcing and the market value of assets under administration and custody. Market

interest rates impact both securities lending revenue and the earnings on client cash balances. Broker-dealer fees depend on the level of activity in the fixed income and equity markets and the financing needs of customers, which are typically higher when the equity and fixed income markets are active. Also, tri-party repo arrangements continue to remain a key revenue driver in broker-dealer services. Foreign exchange trading revenues are influenced by the volume of client transactions and the spread realized on these transactions, market volatility in major currencies, the level of cross-border assets held in custody for clients, the level and nature of underlying cross-border investments and other transactions undertaken by corporate and institutional clients. Segment expenses are principally driven by staffing levels and technology investments necessary to process transaction volumes. Fees paid to sub-custodians are driven by market values of global assets and related transaction volumes.

Table of Contents

We are one of the leading global securities servicing providers with a total of \$20.7 trillion of assets under custody and administration at June 30, 2009. We continue to maintain our number one ranking in the three major global custody surveys. We are one of the largest providers of fund services in the world, servicing \$4.2 trillion in assets. We also service 50% of the funds in the U.S. exchange-traded funds marketplace. We are the largest custodian for U.S. corporate and public pension plans. BNY Mellon Asset Servicing services 46% of the top 50 endowments.

We are a leading custodian in the U.K. and service 30% of U.K. pensions. European asset servicing continues to grow across all products, reflecting significant cross-border investment and capital flow. In securities lending, we are one of the largest lenders of U.S. Treasury securities and depositary receipts and service a lending pool of \$2.1 trillion in 30 markets around the world. We are one of the largest global providers of performance and risk analytics with \$8.2 trillion in assets under measurement.

Our broker-dealer service business is a leader in global clearance, clearing equity and fixed income transactions in more than 100 markets. We clear over 60% of U.S. Government securities transactions. We are a leading collateral management agent with \$1.8 trillion in tri-party balances worldwide at June 30, 2009.

Review of financial results

Income before taxes was \$394 million in the second quarter of 2009 compared with \$491 million in the second quarter of 2008, and \$367 million in the first quarter of 2009. Income before taxes, excluding intangible amortization and support agreement charges, was \$388 million in the second quarter of 2009 compared with \$482 million in the second quarter of 2008 and \$380 million in the first quarter of 2009. The decrease in income before taxes compared with the second quarter of 2008 primarily resulted from the impact of weaker market values, lower securities lending fees and foreign exchange and other trading activities, partially offset by strong expense control. The sequential increase primarily reflects higher securities servicing fees.

Asset servicing fees decreased \$188 million, or 23%, compared with the second quarter of 2008 and increased \$59 million, or

10% (unannualized) sequentially. The decrease compared with the second quarter of 2008 reflects the challenging market conditions for volume and spread-related businesses, partially offset by continued strong new business. The increase sequentially reflects improved market conditions and strong new business. Asset Servicing generated \$1.7 trillion in assets under custody over the last 12 months.

Securities lending revenue decreased \$105 million compared to the second quarter of 2008 and increased \$7 million sequentially. The year-over-year results reflect overall de-leveraging in the financial markets and lower market valuations while the sequential increase reflects the benefit of seasonally higher revenue in the second quarter of 2009.

Foreign exchange and other trading decreased 8% year-over-year and increased 4% (unannualized) compared with the first quarter of 2009. The year-over-year results primarily reflect higher volatility, partially offset by lower volume, while the sequential increase primarily reflects higher volume.

Net interest revenue decreased 1% compared to the prior year and decreased 15% (unannualized) sequentially. The decrease year-over-year reflects tighter spreads, partially offset by higher average deposit levels. The sequential decrease reflects the decline in average deposit levels and tighter spreads.

Noninterest expense (excluding amortization of intangible assets and support agreement charges) decreased \$105 million compared with the second quarter of 2008 reflecting continued expense control as well as the impact of merger-related synergies. Noninterest expense (excluding intangible amortization and support agreement charges) increased \$17 million sequentially as a result of higher sub-custodian out-of-pocket expense, partially offset by lower staff expense.

Year-to-date 2009 compared with year-to-date 2008

Income before taxes totaled \$761 million in the first six months of 2009 compared with \$1.1 billion in the first six months of 2008. Excluding intangible amortization and support agreement charges, income before taxes decreased \$306 million. Fee and other revenue decreased \$474 million primarily due to lower securities lending fees and lower market levels, partially offset by new business. Net interest

Table of Contents

revenue increased \$25 million primarily driven by increased deposit levels. Noninterest expense (excluding intangible amortization and support agreement charges) decreased \$143 million primarily due to strong expense control efforts and the continued impact of merger-related synergies.

Business description

The Issuer Services segment provides a diverse array of products and services to global fixed income and equity issuers.

As the world's leading provider of corporate trust and agency services, the Company services \$11.8 trillion in outstanding debt from 57 locations in 19 countries. Along with our subsidiaries and affiliates, we are the number one provider of corporate trust services for all major debt categories across conventional, structured credit and specialty debt. We serve as depositary for 1,320 sponsored American and global depositary receipt (DR) programs, providing services to companies from 67 countries. In addition to top-ranked stock transfer agency services, BNY Mellon Shareowner Services offers a comprehensive suite of equity solutions, including

Edgar Filing: Bank of New York Mellon CORP - Form 10-Q

record-keeping and corporate actions processing, demutualizations, direct investment, dividend reinvestment, proxy solicitation and employee stock plan administration.

Fee revenue in the Issuer Services segment depends on:

the volume of issuance of fixed income securities;
depository receipts issuance and cancellation volume;
corporate actions impacting depository receipts; and
stock transfer, corporate actions and equity trading volumes.

Expenses in the Issuer Services segment are driven by staff, equipment and space required to support the services provided by the segment.

Table of Contents

Review of financial results

Income before taxes was \$272 million in the second quarter of 2009, compared with \$288 million in the second quarter of 2008 and \$286 million in the first quarter of 2009. Issuer Services results, compared with prior periods, continued to benefit from new business wins in Corporate Trust and Depository Receipts and expense control, but were more than offset by lower interest rates and lower activity levels.

Total fee and other revenue decreased 14% year-over-year and increased 1% (unannualized) sequentially.

Corporate Trust Fee and other revenue decreased year-over-year and increased sequentially. The year-over-year decrease reflects the lower level of fixed income issuances globally and lower money market fees, partially offset by the impact of new business related to government stabilization programs. The sequential increase was primarily driven by new business.

Depository Receipts Fee and other revenue decreased year-over-year and sequentially. Both periods were impacted by lower transaction fees, partially offset by the benefit of new business. The sequential decline was also impacted by a lower level of corporate actions.

Shareowner Services Fee and other revenue decreased year-over-year and increased sequentially. The year-over-year decrease was due to lower overall corporate action activity and the impact of lower equity values on employee stock option plan fees. The sequential increase primarily reflects higher seasonal shareholder services revenue and higher employee stock option plan fees but were partially offset by lower overall corporate action activity.

Net interest revenue increased \$9 million, or 5%, compared with the second quarter of 2008, and decreased \$15 million, or 8% (unannualized), compared with the first quarter of 2009. The year-over-year increase reflects higher customer deposit balances while the sequential decrease reflects tighter spreads.

Noninterest expense (excluding amortization of intangible assets) decreased \$44 million, or 13%, compared with the second quarter of 2008 contributing to 400 basis points of positive operating leverage. The decrease compared with the second quarter of 2008 was driven by a 13% decline in total staff expenses. Noninterest expense increased \$6 million, or 2%, (unannualized) compared with the first quarter of 2009. The sequential increase in noninterest expense (excluding intangible amortization) was due to increased FDIC expense and higher sub-custodian expenses.

Year-to date 2009 compared with year-to-date 2008

Income before taxes totaled \$558 million in the first six months of 2009 compared with \$510 million in the first six months of 2008. Excluding intangible amortization, income before taxes increased \$49 million. Fee and other revenue decreased \$72 million primarily reflecting a lower level of fixed income issuances globally and lower overall corporate actions activity, partially offset by new business. Net interest revenue increased \$56 million primarily driven by higher customer deposit balances. Noninterest expense (excluding intangible amortization) decreased \$65 million primarily due to lower staff expenses.

Business description

Our Clearing Services segment consists of the Pershing clearing business. Our Pershing LLC and Pershing Advisor Solutions LLC subsidiaries provide financial institutions and independent registered investment advisors with operational support, trading services, flexible technology, an expansive array of investment solutions, practice management support and service excellence. Pershing services more than 1,150 retail and institutional financial organizations and independent registered investment advisors who collectively represent approximately five million investors.

Pershing Prime Services delivers an integrated suite of prime brokerage solutions, including expansive access to securities lending, dedicated client service, leading-edge technology and reporting tools, robust cash management products, global execution and order management capabilities, and additional integrated solutions of the Company's other business segments.

Revenue in this segment includes fees and commissions from broker-dealer services, registered investment advisor services, prime brokerage services and electronic trading services, which are primarily driven by:

trading volumes, particularly those related to retail customers;
overall market levels; and
the amount of assets under administration.

A substantial amount of revenue in this segment is generated from non-transactional activities, such as asset gathering, mutual funds, money market funds and retirement programs, administration and other services. Segment expenses are driven by staff, equipment and space required to support the services provided by the segment and the cost of clearing trades.

Review of financial results

Income before taxes increased \$37 million, or 37%, compared with the second quarter of 2008, and decreased \$6 million, or 4% (unannualized), compared with the first quarter of 2009. Clearing services results reflect the benefit of strong expense control which helped mitigate lower market volatility and low interest rates.

Total fee and other revenue decreased \$9 million, or 3%, compared with the second quarter of 2008 as higher trading revenues and trading volumes were

Table of Contents

more than offset by lower money market related fees and lower asset valuations. Compared with the first quarter of 2009, fee and other revenue decreased \$7 million, or 2% (unannualized), primarily due to lower money market related fees and trading revenues.

Strong expense control resulted in a year-over-year decline in noninterest expense (excluding intangible amortization). Compared to the second quarter of 2008, noninterest expense declined \$35 million, or 12%, contributing to 1,300 basis points of positive operating leverage. The year-over-year decrease primarily reflects lower staff expense, partially offset by higher volume-related clearing expenses. Noninterest expense increased \$4 million, or 2% (unannualized), sequentially, primarily reflecting higher volume-related clearing expenses.

Year-to-date 2009 compared with year-to-date 2008

Income before taxes totaled \$282 million in the first six months of 2009 compared with \$210 million in the first six months of 2008. Excluding intangible amortization, income before taxes increased \$74 million. Fee and other revenue increased \$9 million primarily reflecting higher trading revenue, partially offset by lower money market related fees and lower asset valuations. Noninterest expense (excluding intangible amortization) decreased \$46 million primarily reflecting strong expense control.

Business description

The Treasury Services segment includes cash management solutions, trade finance services, international payment services, global markets, capital markets and liquidity services.

Treasury services revenue is directly influenced by the volume of transactions and payments processed, loan levels, types of service provided, net interest revenue earned from deposit

balances generated by activity across our business operations and the value of the credit derivatives portfolio. Treasury services revenue is indirectly influenced by other factors including market volatility in major currencies and the level and nature of underlying cross-border investments, as well as other transactions undertaken by corporate and institutional clients. Segment expenses are driven by staff, equipment and space required to support the services provided, as well as operating services in support of volume increases.

Table of Contents

Treasury Services offers leading-edge technology, innovative products, and industry expertise to help its clients optimize cash flow, manage liquidity and make payments around the world in more than 100 different countries. We maintain a global network of branches, representative offices and correspondent banks to provide comprehensive payment services including funds transfer, cash management, trade services and liquidity management. We are the third largest USD payment processor, processing about 170 thousand, or an average of about \$1.8 trillion, global payments daily.

Our corporate lending strategy is to focus on those clients and industries that are major users of securities servicing and treasury services. Revenue from our lending activities is primarily driven by loan levels and spreads over funding costs.

Review of financial results

Income before taxes was \$144 million in the second quarter of 2009 compared with \$198 million in the second quarter of 2008, and \$196 million in the first quarter of 2009. Results compared with both prior periods primarily reflect growth in treasury services fees and well-controlled expenses, which were more than offset by lower trading revenue.

Total fee and other revenue decreased \$60 million, compared with the second quarter of 2008 and \$44 million compared with the first quarter of 2009 as higher treasury services revenue resulting from higher global payment fees was more than offset

by a lower valuation of credit derivatives used to hedge the loan portfolio and lower capital markets related fees.

Net interest revenue increased \$2 million compared to the second quarter of 2008 and declined \$3 million sequentially. Both changes reflect fluctuations in customer deposit levels.

Noninterest expense (excluding amortization of intangible assets) decreased \$4 million compared with the first quarter of 2008 and increased \$4 million sequentially. The year-over-year decrease reflects the impact of merger-related synergies and overall expense control, partially offset by higher FDIC expense. The increase sequentially was primarily driven by higher FDIC expense.

Year-to-date 2009 compared with year-to-date 2008

Income before taxes totaled \$340 million in the first six months of 2009 compared with \$395 million in the first six months of 2008. Excluding intangible amortization, income before taxes decreased \$56 million. Fee and other revenue decreased \$48 million primarily reflecting growth in treasury services fees which were more than offset by a lower trading valuation of the credit derivatives portfolio and lower capital markets related fees. Net interest revenue decreased \$22 million primarily due to lower spreads and loan volumes. Noninterest expense (excluding intangible amortization) decreased \$14 million primarily reflecting overall expense control.

34 The Bank of New York Mellon Corporation

Table of Contents

Business description

In July 2009, we announced an agreement to sell MUNB, our national bank located in Florida. As a result, we adopted discontinued operations accounting for MUNB. This business was formerly included in the Other segment. All prior period results have been restated.

The Other segment primarily includes:

the results of the leasing portfolio;
corporate treasury activities;
BNY ConvergEx 33.7% equity interest; and
business exits and corporate overhead.

Revenue primarily reflects:

net interest revenue from the leasing portfolio;
any residual interest income resulting from transfer pricing algorithms relative to actual results;
fee and other revenue from corporate and bank-owned life insurance; and
gains (losses) associated with the valuation of securities and other assets.

Noninterest expense includes:

M&I expenses;
restructuring charges;
direct expenses supporting leasing, investing and funding activities; and
certain corporate overhead not directly attributable to the operations of other segments.

Review of financial results

Income before taxes was a loss of \$530 million for the second quarter of 2009, compared with a loss of \$703 million in the second quarter of 2008, and a loss of \$503 million in the first quarter of 2009.

The Other segment includes the following activity:

In the second quarter of 2009:

a \$208 million (pre-tax) securities loss associated with other-than-temporary impairment (OTTI) recorded in total fee and other revenue; and
a \$61 million (pre-tax) FDIC special assessment.

In the first quarter of 2009:

a \$264 million (pre-tax) securities loss associated with OTTI; and
a loss of \$58 million related to our equity investment in BNY ConvergEx.

In the second quarter of 2008:

a \$377 million (pre-tax) loss related to the SILO charge recorded in net interest revenue; and
a \$152 million (pre-tax) securities loss associated with OTTI.

Year-to-date 2009 compared with year-to-date 2008

Income before taxes in the Other segment was a loss of \$1.033 billion in the first six months of 2009 compared with a loss of \$883 million in the first six months of 2008. Total revenue decreased \$151 million reflecting the OTTI charges recorded in the first half of 2009. Non-interest expenses (excluding the FDIC special assessment, intangible amortization and M&I expenses) increased only \$3 million reflecting overall expense control.

Critical accounting estimates

Our significant accounting policies are described in Note 1 to the Consolidated Financial Statements contained in the Company's 2008 Annual Report on Form 10-K. Our more critical accounting estimates are those related to goodwill and other intangibles, the allowance for credit losses, fair value of financial instruments and derivatives, OTTI and pension accounting as referenced or described below.

Critical policy

Pension accounting

Reference

The Company's 2008 Annual

Report, pages 46 and 47.

Goodwill and other intangibles

We record all assets and liabilities acquired in purchase acquisitions, including goodwill, indefinite-lived intangibles, and other intangibles, at fair value as required by SFAS Nos. 141(R) (ASC 805-10) and 142 (ASC 350-10), Business Combinations. Goodwill (\$16.0 billion at June 30, 2009) and indefinite-lived intangible assets (\$2.7 billion at June 30, 2009) are not amortized but are subject to annual tests for impairment or more often if events or circumstances indicate they may be impaired. Other intangible assets are amortized over their estimated

Table of Contents

useful lives and are subject to impairment if events or circumstances indicate a possible inability to realize the carrying amount.

The initial recording of goodwill, indefinite-lived intangibles, and other intangibles requires subjective judgments concerning estimates of the fair value of the acquired assets and liabilities. The goodwill impairment test is performed in two phases. The first step compares the estimated fair value of the reporting unit with its carrying amount, including goodwill. If the estimated fair value of the reporting unit exceeds its carrying amount, goodwill of the reporting unit is considered not impaired. However, if the carrying amount of the reporting unit exceeds its estimated fair value, an additional procedure would be performed. That additional procedure would compare the implied fair value of the reporting unit's goodwill with the carrying amount of that goodwill. An impairment loss would be recorded to the extent that the carrying amount of goodwill exceeds its implied fair value.

The carrying value of goodwill in each of the Company's business segments, which are our reporting units under SFAS 142 (ASC 350-20), was tested for possible impairment in 2008 and 2009 in accordance with SFAS 142 (ASC 350-20), using market and income methods including observable market data to estimate fair values. In addition, material events and circumstances that might be indicators of possible impairment were assessed during interim periods. These included the changing business climate, regulatory and legal factors, the recoverability of long-lived assets, changes in our competitors, and the earnings outlook for the Company's segments. Further, the Company's market capitalization exceeded its net book value at the end of each quarter of 2008 and the first and second quarters of 2009. Our goodwill and intangible assets could be subject to impairment in future periods if economic conditions that impact our segments continue to worsen. Impairment is a non-cash charge.

Indefinite-lived intangible assets are evaluated for impairment at least annually by comparing their fair value to their carrying value. Other intangible assets (\$3.0 billion at June 30, 2009) are evaluated for impairment if events and circumstances indicate a possible impairment. Such evaluation of other intangible assets is initially based on undiscounted cash flow projections.

Fair value may be determined using: market prices, comparison to similar assets, market multiples, discounted cash flow analysis and other determinants. Estimated cash flows may extend far into the future and, by their nature, are difficult to determine over an extended timeframe. Factors that may significantly affect the estimates include, among others, competitive forces, customer behaviors and attrition, changes in revenue growth trends, cost structures and technology, and changes in discount rates and specific industry or market sector conditions. Other key judgments in accounting for intangibles include useful life and classification between goodwill and indefinite-lived intangibles or other intangibles which require amortization. See Note 6 of the Notes to Consolidated Financial Statements for additional information regarding intangible assets. At June 30, 2009, we had \$21.7 billion of goodwill, indefinite-lived intangibles, and other intangible assets.

Allowance for loan losses and allowance for lending-related commitments

The allowance for credit losses and allowance for lending related commitments consist of three elements: (1) an allowance for impaired credits; (2) an allowance for higher risk rated loans and exposures and pass rated loans and exposures; and (3) an unallocated allowance based on general economic conditions and certain risk factors in our individual portfolio and markets. Further discussion of the three elements can be found under Asset quality and allowance for credit losses in Consolidated balance sheet review.

The allowance for credit losses represents management's estimate of probable losses inherent in our credit portfolio. This evaluation process is subject to numerous estimates and judgments. Probability of default ratings are assigned based on internal ratings after analyzing the credit quality of each borrower/ counterparty and our internal ratings are generally consistent with external ratings agencies default databases. Loss given default ratings are driven by the collateral, structure, and seniority of each individual asset and are consistent with external loss given default/recovery databases. The portion of the allowance related to impaired credits is based on the present value of expected future cash flows; however, as a practical expedient, it may be based on the credit's observable market price. Additionally, it may be based on the fair value

Table of Contents

of collateral if the credit is collateral dependent. Changes in the estimates of probability of default, risk ratings, loss given default/recovery rates, and cash flows could have a direct impact on the allocated allowance for loan losses.

To the extent actual results differ from forecasts or management's judgment, the allowance for credit losses may be greater or less than future charge-offs.

It is difficult to quantify the impact of changes in forecasts on our allowance for credit losses. Nevertheless, we believe the following discussion may enable investors to better understand the variables that drive the allowance for credit losses. A key variable in determining the allowance is management's judgment in determining the size of the unallocated allowance. At June 30, 2009, the unallocated allowance was \$29 million, or 6% of the total allowance. At June 30, 2009, if the unallocated allowance, as a percentage of the total allowance, was 5% higher, the allowance would have increased by approximately \$21 million.

The credit rating assigned to each credit is another significant variable in determining the allowance. If each credit were rated one grade better, the allowance would have decreased by \$106 million, while if each credit were rated one grade worse, the allowance would have increased by \$169 million. Similarly, if the loss given default were one rating worse, the allowance would have increased by \$70 million, while if the loss given default were one rating better, the allowance would have decreased by \$55 million. For impaired credits, if the fair value of the loans was 10% higher or lower, the allowance would have decreased or increased by \$4 million, respectively.

Fair value of financial instruments

On Jan. 1, 2008, we adopted SFAS 157 (ASC 820-10) and SFAS 159 (ASC 825-10).

SFAS 157 (ASC 820-10) defines fair value, establishes a framework for measuring fair value, and expands disclosures about assets and liabilities measured at fair value. The standard also established a three-level hierarchy for fair value measurements based upon the transparency of inputs to the valuation of an asset or liability as of the measurement date.

Effective Jan. 1, 2009, we adopted SFAS 157-4 (ASC 820-10), *Determining Fair Value When the Volume and Level of Activity for the Asset or Liability Have Significantly Decreased and Identifying Transactions That Are not Orderly*. SFAS 157-4 (ASC 820-10) provides guidance on how to determine the fair value when the volume and level of activity for the asset or liability have significantly decreased and reemphasizes that the objective of a fair value measurement remains an exit price notion. In those circumstances, further analysis of transactions or quoted prices is needed, and an adjustment to the transactions or quoted prices may be necessary to estimate fair value in accordance with SFAS 157 (ASC 820-10). It also requires additional disclosures for instruments within the scope of SFAS 157 (ASC 820-10) to include inputs and valuation techniques used, change in valuation techniques and related inputs, if any, and more disaggregated information relating to debt and equity securities.

The amended standard provides a consistent definition of fair value, which focuses on exit price in an orderly transaction (that is, not a forced liquidation or distressed sale) between market participants at the measurement date under current market conditions. If there has been a significant decrease in the volume and level of activity for the asset or liability, a change in valuation technique or the use of multiple valuation techniques may be appropriate. In such instances, determining the price at which willing market participants would transact at the measurement date under current market conditions depends on the facts and circumstances and requires the use of significant judgment. The objective is to determine from weighted indicators of fair value a reasonable point within the range that is most representative of fair value under current market conditions.

Fair value Securities

Level 1 Securities

Recent quoted prices from exchange transactions are used for debt and equity securities that are actively traded on exchanges and for U.S. Treasury securities and U.S. Government securities that are actively traded in highly liquid over the counter markets. We include these securities in Level 1 of the SFAS 157 (ASC 820-10) hierarchy.

Table of Contents

Level 2 Securities

For securities where quotes from recent transactions are not available for identical securities, we determine fair value primarily based on pricing sources with reasonable levels of price transparency that employ financial models or obtain comparisons to similar instruments to arrive at consensus prices.

Specifically, the pricing sources obtain recent transactions for similar types of securities (e.g., vintage, position in the securitization structure) and ascertain variables such as discount rate and speed of prepayment for the type of transaction and apply such variables to similar types of bonds. We view these as observable transactions in the current market place and classify such securities as Level 2. They discontinue pricing any specific security whenever they determine there is insufficient observable data to provide a good faith opinion on price.

Securities included in this category that are affected by the lack of market liquidity include our Alt-A residential mortgage-backed securities (RMBS), prime RMBS, subprime RMBS and commercial mortgage-backed securities.

In addition, we have significant investments in more actively traded agency RMBS and the pricing sources derive the prices for these securities largely from quotes they obtain from three major inter-dealer brokers.

For securities guaranteed by monoline insurers, the financial strength of the insurance provider is analyzed and that information is included in the fair value assessment for such securities.

The pricing sources did not discontinue pricing for any securities in our investment securities portfolio at June 30, 2009.

The prices provided by pricing sources are subject to review and challenges by industry participants, including ourselves.

Level 3 Securities

In the first quarter of 2009, we changed our valuation technique for determining the fair value of certain securities when there has been a significant decline in volume and market activity. Recent transactions in certain non-agency RMBS and commercial mortgage-

backed securities may not reflect orderly transactions in the marketplace. In adopting the guidance of SFAS 157-4 (ASC 820-10), for these securities, we adjust the discount rate to reflect an orderly transaction in the current marketplace. We used a discount rate that was determined based on our assessment of the credit quality of the non-agency RMBS and commercial mortgage-backed securities. The discount rate was derived based on input from market participants as to the appropriate discount rate under current market conditions for hypothetical bond issuances that exhibit credit features similar to the bonds we hold.

To further reflect current market conditions we weighted our internally modeled price with prices derived from pricing sources to calculate the fair market value in an orderly transaction.

Approximately 92% of our securities are valued by pricing sources with reasonable levels of price transparency. Approximately 8% of our securities are priced based on economic models and non-binding dealer quotes, and are included in Level 3 of the SFAS 157 (ASC 820-10) hierarchy.

See Note 16 to the Notes to Consolidated Financial Statements for details of our securities by SFAS 157 (ASC 820-10) hierarchy level.

Fair value Derivative financial instruments

Level 1 Derivative financial instruments

We include derivative financial instruments that are actively traded on exchanges, principally foreign exchange futures and forward contracts, in Level 1 of the SFAS 157 (ASC 820-10) hierarchy.

Level 2 Derivative financial instruments

Edgar Filing: Bank of New York Mellon CORP - Form 10-Q

The majority of our derivative financial instruments are priced using the Company's internal models which use observable inputs for interest rates, pay-downs (both actual and expected), foreign exchange rates, option volatilities and other factors. The valuation process takes into consideration factors such as counterparty credit quality, liquidity, concentration concerns, and results of stress tests.

Substantially all of our model-priced derivative financial instruments are included in Level 2 of the SFAS 157 (ASC 820-10) hierarchy.

Table of Contents

Level 3 Derivative financial instruments

Certain interest rate swaps with counterparties that are highly structured entities require significant judgment and analysis to adjust the value determined by standard pricing models. These interest rate swaps are included in Level 3 of the SFAS 157 (ASC 820-10) hierarchy and compose less than 1% of our derivative financial instruments.

To test the appropriateness of the valuations, we subject the models to review and approval by an independent internal risk management function, benchmark the models against similar instruments and validate model estimates to actual cash transactions. In addition, we perform detailed reviews and analyses of profit and loss. Valuation adjustments are determined and controlled by a function independent of the area initiating the risk position. As markets and products develop and the pricing for certain products becomes more transparent, we refine our valuation methods. Any changes to the valuation models are reviewed by management to ensure the changes are justified.

To confirm that our valuation policies are consistent with exit price as prescribed by SFAS 157 (ASC 820-10), we reviewed our derivative valuations using recent transactions in the marketplace, pricing services and the results of similar types of transactions. As a result of maximizing observable inputs as required by SFAS 157 (ASC 820-10), in 2008 we began to reflect external credit ratings as well as observable credit default swap spreads for both ourselves as well as our counterparties when measuring the fair value of our derivative positions. Accordingly, the valuation of our derivative positions is sensitive to the current changes in our own credit spreads, as well as those of our counterparties.

For details of our derivative financial instruments by SFAS 157 (ASC 820-10) hierarchy level, see Note 16 to the Notes to Consolidated Financial Statements.

Fair value option

SFAS 159 (ASC 825-10) provides the option to elect fair value as an alternative measurement for selected financial assets, financial liabilities, unrecognized firm commitments, and written loan commitments. Under SFAS 159 (ASC 825-10), fair value is used for both the initial and subsequent measurement of the designated assets, liabilities and commitments,

with the changes in fair value recognized in income. At June 30, 2009, we applied the fair value option to \$110 million of unfunded loan commitments. These unfunded loan commitments are valued using quotes from dealers in the loan markets, and we include these in Level 3 of the SFAS 157 (ASC 820-10) hierarchy. See Note 17 to the Notes to Consolidated Financial Statements for additional disclosure regarding SFAS 159 (ASC 825-10).

Also in 2008, we elected fair value accounting for other short-term investments U.S. government-backed commercial paper (\$5.6 billion at Dec. 31, 2008) and borrowings from Federal Reserve related to asset-backed commercial paper (\$5.6 billion at Dec. 31, 2008). There were no balances outstanding for these instruments at March 31, 2009 and June 30, 2009.

Fair value Judgments

In times of illiquid markets and financial stress, actual prices and valuations may significantly diverge from results predicted by models. In addition, other factors can affect our estimate of fair value, including market dislocations, incorrect model assumptions, and unexpected correlations.

These valuation methods could expose us to materially different results should the models used or underlying assumptions be inaccurate. See Basis of Presentation in Note 1 to the Notes to Consolidated Financial Statements.

Other-than-temporary impairment

In April 2009, the FASB issued SFAS 115-2 (ASC 320-10) which modifies the OTTI model for investments in debt securities. Under this guidance, a debt security is considered impaired if its fair value is less than its amortized cost basis. An OTTI is triggered if (1) the intent is to sell the security, (2) the security will more likely than not have to be sold before the impairment is recovered, or (3) the amortized cost basis is not expected to be recovered. When an entity does not intend to sell the security before recovery of its cost basis, it will recognize the credit component of an OTTI of a debt security in earnings and the remaining portion in other comprehensive income.

For each non-agency RMBS, which includes Alt-A, subprime RMBS and prime RMBS, not backed by

Table of Contents

the government, in the investment portfolio (including but not limited to those whose fair value is less than their amortized cost basis), an extensive, regular review is conducted to determine if an OTTI has occurred. To determine if the unrealized loss for non-agency RMBS is other-than-temporary, we project total estimated defaults of the underlying assets (mortgages) and multiply that calculated amount by an estimate of realizable value upon sale in the marketplace (severity) in order to determine the projected collateral loss. We also evaluate the current credit enhancement underlying the bond to determine the impact on cash flows. If we determine that a given RMBS position will be subject to a write-down or loss, we record the expected credit loss as a charge to earnings.

Since the end of the fourth quarter of 2008, the housing market indicators and the broader economy have continued to deteriorate. To reflect the declining value of homes in the current environment, we adjusted our non-agency RMBS loss severity assumptions to decrease the amount we expect to receive to cover the value of the original loan. See Note 5 of Notes to Consolidated Financial Statements for projected weighted average default rates and loss severities for recent vintages of Alt-A, subprime and prime RMBS. If actual delinquencies, default rates and loss severity assumptions worsen, we would expect additional impairment losses to be recorded in future periods.

As previously mentioned, deterioration in the economy continues to have a significant impact on our most problematic securities, the Alt-A, subprime and prime RMBS portfolios. In the second quarter of 2009, we recorded \$124 million (pre-tax) of impairment charges on our Alt-A, subprime and prime portfolios. If we were to increase or decrease each of our loss severity and projected default rates on each of the positions in these portfolios by 100 basis points, impairment charges on these securities would have increased by \$52 million (pre-tax) or decreased by \$42 million (pre-tax) in the second quarter of 2009.

The home equity lines of credit (HELOC) portfolio holdings are regularly evaluated for potential OTTI. The HELOC securities credit enhancement is provided by a combination of excess spread, over-collateralization, subordination, and a note insurance policy provided by one of six monoline insurers. For

the HELOC holdings, the rating is highly dependent upon the rating of the monoline insurance provider. At June 30, 2009, HELOCs with a face value of approximately \$636 million and a fair market value of approximately \$219 million are guaranteed by various monoline insurers. Subsequent to June 30, 2009, credit quality at one of the monoline insurers declined and, as a result, the Company may have additional OTTI charges on HELOCs in the third quarter of 2009. The securities supported by the insurer had a fair value of \$50 million at June 30, 2009.

If a monoline insurer experiences a credit rating downgrade and it is determined that the monoline insurer may not be able to meet its obligations, the HELOC holdings guaranteed by that insurer are further evaluated based on the deal collateral and structure without the insurer guarantee. Potential losses are compared to the available total coverage provided by excess spread, over-collateralization and subordination for each bond to determine OTTI.

In addition, we assess OTTI for an appropriate subset of our investment securities subject to EITF 99-20 (ASC 325-40) and as amended by FASB Staff Position EITF 99-20-1 (ASC 325-40) Amendments to the Impairment Guidance of EITF Issue No. 99-20 (ASC 325-40) by testing for an adverse change in cash flows. Any unrealized loss on a security identified as other than temporarily impaired under EITF 99-20 (ASC 325-40) analysis is charged to earnings.

Upon acquisition of a security, the Company decides whether it is within the scope of EITF 99-20 (ASC 325-40) or will be evaluated for impairment under SFAS 115 (ASC 320-10). Subsequently, if the security is downgraded, we do not alter this decision.

EITF 99-20 (ASC 325-40) is an interpretation of SFAS 115 (ASC 320-10) for certain debt securities which are beneficial interests in securitized financial assets. Specifically, EITF 99-20 (ASC 325-40) provides incremental impairment guidance for a subset of the debt securities within the scope of SFAS 115 (ASC 320-10). For securities where there is no debt rating at acquisition, and the security is a beneficial interest in securitized financial assets, the Company uses the EITF 99-20 (ASC 325-40) impairment model. For securities where there is no debt rating at acquisition and the security is not a beneficial interest in securitized financial assets the

Table of Contents

Company uses the SFAS 115 (ASC 320-10) impairment model.

Consolidated balance sheet review

At June 30, 2009, total assets were \$203.0 billion compared with \$237.5 billion at Dec. 31, 2008. Deposits totaled \$130.6 billion at June 30, 2009 and \$159.7 billion at Dec. 31, 2008. The decrease in total assets and deposits from Dec. 31, 2008 reflects a decline in the size of the balance sheet, which had been anticipated, as short-term credit markets eased and noninterest-bearing deposits taken in during the credit crisis decreased. Total assets averaged \$208.5 billion in the second quarter of 2009, compared with \$220.1 billion in the first quarter of 2009 and \$196.0 billion in the second quarter of 2008. Total deposits averaged \$131.7 billion in the second quarter of 2009, \$145.0 billion in the first quarter of 2009 and \$118.2 billion in the second quarter of 2008.

At June 30, 2009, we had available funds of approximately \$67 billion compared with \$78 billion at March 31, 2009. Our percentage of liquid assets to total assets was 33% at June 30, 2009 compared with 38% at March 31, 2009. As our balance sheet returned to expected levels in the second quarter of 2009, the level of liquid assets held by the Company decreased, reflecting lower deposit levels as well as our strategy to reduce cash held at central banks and invest in securities issued by government-sponsored and guaranteed entities with a duration of approximately 2-4 years.

Investment securities were \$48.9 billion or 24% of total assets at June 30, 2009, compared with \$39.4 billion or 17% of total assets at Dec. 31, 2008. The increase in investment securities primarily relates to our strategy of investing in securities issued by government-sponsored and government-guaranteed entities.

Loans were \$38.2 billion or 19% of total assets at June 30, 2009, compared with \$43.4 billion or 18% of total assets at Dec. 31, 2008. The decrease in loan levels was primarily due to lower overdrafts, the reclassification of MUNB to discontinued operations and our institutional credit strategy to reduce targeted exposure.

Trading assets were \$7.6 billion at June 30, 2009 compared with \$11.1 billion at Dec. 31, 2008. Trading liabilities were \$6.9 billion at June 30, 2009

compared with \$8.1 billion at Dec. 31, 2008. The decrease in both trading assets and trading liabilities reflects the change in interest rates, foreign exchange rates and the settlement of contracts.

Total shareholders' equity applicable to The Bank of New York Mellon Corporation was \$27.3 billion at June 30, 2009 and \$28.1 billion at Dec. 31, 2008. The decrease in total shareholders' equity primarily reflects the second quarter 2009 repurchase of the Series B preferred stock issued to the U.S. Treasury, partially offset by the common stock issuance in the second quarter of 2009.

Investment securities

The following table shows the distribution of our total securities portfolio at fair value:

Investment securities (at fair value)

<i>(in millions)</i>	June 30, 2009	Dec. 31, 2008
Fixed income securities:		
Mortgage and asset-backed securities	\$ 34,746	\$ 32,081
Corporate debt:		
Government-sponsored and guaranteed entities	1,869	983
Other	396	695
Short-term money market instruments	167	106
U.S. government obligations	3,367	781
U.S. government agencies	1,283	1,299
State and political subdivisions	778	1,076
Other foreign debt:		
Government-sponsored and guaranteed entities	4,491	-
Other	47	10
Subtotal fixed income securities	47,144	37,031

Edgar Filing: Bank of New York Mellon CORP - Form 10-Q

Equity securities:

Money market or fixed income funds	987	1,325
Other	100	41
Subtotal equity securities	1,087	1,366
Total investment securities fair value	\$ 48,231	\$ 38,397
Total investment securities carrying value	\$ 48,938	\$ 39,435

At June 30, 2009, the carrying value of our investment securities portfolio was \$48.9 billion compared with \$39.4 billion at Dec. 31, 2008. Average investment securities were \$51.9 billion in the second quarter of 2009, compared with \$43.5 billion in the first quarter of 2009.

The increase in the securities portfolio primarily reflects our strategy to reduce cash held at central banks and invest in securities issued by government-sponsored and guaranteed entities with a duration of 2-4 years.

The Bank of New York Mellon Corporation 41

^(a) Amortized cost before impairments.

^(b) The Watch list includes those securities we view as having a higher risk of additional impairment charges.

The unrealized net of tax loss on our securities portfolio recorded in OCI was \$4.4 billion at June 30, 2009 compared with \$4.5 billion at March 31, 2009. The improvement in the net of tax loss on our securities portfolio reflects the tightening of spreads, partially offset by higher interest rates and the impact of SFAS 157-4 (ASC 820-10). We do not intend to sell these securities and it is not more likely than not that we will have to sell. We routinely test our investment securities for OTTI. As a result, we recorded an impairment charge of \$256 million (pre-tax) in the second quarter of 2009.

As a result of adopting SFAS 157-4 (ASC 820-10), the unrealized pre-tax loss decreased by approximately \$1.2 billion in the first quarter of 2009, reflecting the price at which the total securities portfolio would sell in a more orderly market. As the credit markets improved and became more orderly during the second quarter of 2009, the SFAS 157-4 (ASC 820-10) related unrealized pre-tax loss declined to approximately \$400 million at June 30, 2009. Excluding the impact of SFAS 157-4 (ASC 820-10), the unrealized pre-tax loss on the securities portfolio would have decreased by approximately \$1.0 billion (pre-tax) at June 30, 2009, and the fair value of the portfolio would have been \$400 million (pre-tax) less than the current fair value.

In the second quarter of 2009, we reclassified the European Floating Rate Notes to the watch list category. These securities are very highly rated (100% are included in the AAA to AA- category) and

well seasoned, but given the deterioration in the European housing market and the impairment of a small number of these securities, we determined a reclassification to the watch list category was appropriate.

At June 30, 2009, we had \$151 million of accretible discount related to securities acquired in the consolidation of two commercial paper conduits, Three Rivers Funding Corporation and Old Slip Funding, LLC with a remaining estimated life of approximately 3.6 years. For these securities, the accretion of discount increased net interest revenue and is recorded on a level yield basis. Discount accretion totaled \$24 million in the second quarter of 2009, \$20 million in the first quarter of 2009, \$20 million in the second quarter of 2008, as well as \$44 million and \$37 million in the first half of 2009 and 2008, respectively.

In addition, at June 30, 2009, we also had \$118 million of net amortizable purchase premium related to securities which were not impaired with a remaining estimated life of approximately 4.5 years. For these securities, the amortization of net premium decreased net interest revenue and is recorded on a level yield basis. We recorded net premium amortization of \$9 million and \$6 million in the second quarter and first half of 2009 and net discount of \$3 million in the first quarter of 2009. In 2008 there was less than \$1 million of net discount accretion in the second quarter

Edgar Filing: Bank of New York Mellon CORP - Form 10-Q

of 2008 and \$2 million of premium amortization in the first half of 2008.

42 The Bank of New York Mellon Corporation

Table of Contents

The following table provides pre-tax net securities losses (impairment charges) by type. Securities write-downs in 2008 reflect mark-to-market (both credit and non-credit) impairment write-downs.

Net securities losses (impairment charges) (in millions)	2Q09	1Q09	2Q08	2009	YTD 2008
Alt-A RMBS	\$ 114	\$ 125	\$ 72	\$ 239	\$ 72

Total net securities losses	\$ 256	\$ 295	\$ 152	\$ 551	\$ 225

^(a) Includes \$95 million resulting from the impact of low interest rates on a structured tax investment and \$37 million of seed capital write-downs.

If the expected performance of the underlying collateral of any or all of these securities deteriorates, additional impairments may be recorded against such securities in future periods, as necessary.

At the time of purchase, 100% of our Alt-A portfolio was rated AAA. At June 30, 2009, this portfolio had migrated to 16% AAA to AA- rated, 6% A+ to A-, 4% BBB+ to BBB- and 74% BB+ and lower. At the time of purchase, the portfolio's weighted-average FICO score was 715 and its weighted-average LTV was 74%.

Approximately 50% of the Alt-A portfolio is supported by better performing fixed-rate collateral and the portfolio's weighted-average current credit enhancement is approximately 13%. At June 30, 2009, the unrealized loss on this portfolio was \$3.1 billion and approximately 3% of the portfolio consisted of pay-option adjustable rate mortgage collateral (option ARMS). At June 30, 2009, the securities for which option ARMS were all or a portion of the underlying collateral were rated 3% AAA to AA-, 15% A+, 5% BBB- and 77% BB+ and lower.

The table below shows the vintages of our Alt-A RMBS, prime/other RMBS, subprime RMBS and commercial MBS portfolios at June 30, 2009.

(a) Fair value as a percentage of amortized cost before impairment.

At June 30, 2009, the fair value of our subprime mortgage securities portfolio was \$896 million with 60% of the portfolio rated AA- or higher. The weighted-average current credit enhancement on this portfolio was approximately 34% at June 30, 2009.

The HELOC securities are tested for impairment based on the quality of the underlying security and the condition of the monoline insurer providing credit support. Securities were deemed impaired if we expected they would not be repaid in full without the support of the insurer and the insurer was not rated investment grade by at least one rating agency. The write-downs on HELOC securities in the second quarter of 2009 resulted from further deterioration of the underlying assets.

The following tables show the geographical location and ratings of the fair value of the European floating rate notes at June 30, 2009.

Table of Contents**Fair value**

<i>(dollars in millions)</i>	United Kingdom	Netherlands	Other	Total

Total	100%	-%	-%	-%

No material gains or losses were recorded on securities sold from the available-for-sale portfolio in the second quarter of 2009.

Included in our securities portfolio are the following securities that have a credit enhancement through a guarantee by a monoline insurer:

Investment securities guaranteed**by monoline insurers**

<i>(in millions)</i>	June 30, 2009	Dec. 31, 2008
Municipal securities	\$ 637	\$ 591
Mortgage-backed securities	157	171
Home equity lines of credit securities	215	334
Other asset-backed securities	7	7
Total fair value	\$ 1,016 ^(a)	\$ 1,103
Amortized cost less write-downs	\$ 1,414	\$ 1,384
Mark-to-market unrealized (loss) (pre-tax)	\$ (398)	\$ (281)

^(a) The par value guaranteed by the monoline insurers was \$1.5 billion.

At June 30, 2009, securities guaranteed by monoline insurers were rated 36% AAA to AA-, 21% A+ to A-, 19% BBB+ to BBB- and 24% BB+ and lower. In all cases, when purchasing the securities, we reviewed the credit quality of the underlying securities, as well as the insurer.

See Note 16 to the Notes to Consolidated Financial statements for the detail of securities by level in the fair value hierarchy.

Loans

Edgar Filing: Bank of New York Mellon CORP - Form 10-Q

Total loans

<i>(in billions)</i>	June 30, 2009	Dec. 31, 2008
Period end:		
Non-margin	\$ 34.3	\$ 39.4
Margin	3.9	4.0
Total	\$ 38.2	\$ 43.4
Quarterly average:		
Non-margin	\$ 32.9	\$ 45.0
Margin	4.1	4.9
Total	\$ 37.0	\$ 49.9

Total loans were \$38.2 billion at June 30, 2009, compared with \$43.4 billion at Dec. 31, 2008. The decrease in total loans primarily reflects lower overdrafts, the reclassification of MUNB to discontinued operations and our institutional credit strategy to reduce targeted risk exposure, partially offset by an increase in wealth management loans and mortgages.

The following table provides additional details on our credit exposures and outstandings at June 30, 2009 compared with Dec. 31, 2008.

Total exposure - consolidated

<i>(in billions)</i>	June 30, 2009			Dec. 31, 2008		
	Loans	Unfunded commitments	Total exposure	Loans	Unfunded commitments	Total exposure
Non-margin loans:						
Financial institutions	\$ 11.1	\$ 19.9	\$ 31.0	\$ 11.0	\$ 23.2	\$ 34.2
Commercial	4.6	24.3	28.9	6.3	24.9	31.2

Other residential mortgages	2.3	-	2.3	2.5	0.1	2.6
Overdrafts	4.9	-	4.9	7.0	-	7.0
Other	-	0.1	0.1	0.2	0.3	0.5
Subtotal non-margin loans	34.3	48.1	82.4	39.4	52.6	92.0
Margin loans	3.9	-	3.9	4.0	-	4.0
Total	\$ 38.2	\$ 48.1	\$ 86.3	\$ 43.4	\$ 52.6	\$ 96.0

Table of Contents

At June 30, 2009, total exposures were \$86.3 billion, a decrease of 10% from \$96.0 billion at Dec. 31, 2008, reflecting our institutional credit strategy to reduce risk in our portfolio, lower overdrafts and the reclassification of \$1.6 billion of MUNB loans to discontinued operations.

Our financial institutions and commercial portfolios comprise our largest concentrated risk. These portfolios make up 69% of our total lending exposure.

Financial institutions

The diversity of the financial institutions portfolio is shown in the following table.

Financial institutions portfolio exposure <i>(dollar amounts in billions)</i>	June 30, 2009					Dec. 31, 2008		
	Loans	Unfunded commitments	Total exposure	% Inv grade	% due <1 yr	Loans	Unfunded commitments	Total exposure
Securities industry	\$ 5.7	\$ 2.0	\$ 7.7	92%	95%	\$ 4.0	\$ 2.9	\$ 6.9
Insurance	0.5	6.2	6.7	94	42	0.6	6.4	7.0
Banks	3.0	3.1	6.1	64	91	3.5	2.4	5.9
Asset managers	0.9	3.2	4.1	92	80	0.8	5.5	6.3
Government	0.3	3.1	3.4	92	21	1.4	3.0	4.4
Other	0.7	2.3	3.0	83	40	0.7	3.0	3.7
Total	\$ 11.1	\$ 19.9	\$ 31.0	90%	67%	\$ 11.0	\$ 23.2	\$ 34.2

The financial institutions portfolio exposure was \$31.0 billion at June 30, 2009, compared to \$34.2 billion at Dec. 31, 2008. The decrease from Dec. 31, 2008 primarily reflects lower exposure to asset managers and governments, partially offset by increased exposure to broker-dealers. Exposures to financial institutions are high quality with 90% meeting the investment grade equivalent criteria of our rating system at June 30, 2009. These exposures are generally short-term, with 67% expiring within one year and are frequently secured by securities that we hold in custody on behalf of those financial institutions. For example, securities industry and asset managers often borrow against marketable securities held in custody.

Our exposure to banks is predominately investment grade counterparties in developed countries. Non-investment grade bank exposures are short-term in nature supporting our global trade finance and U.S. dollar clearing businesses in developing countries.

As a conservative measure, our internal credit rating classification for international counterparties caps the rating based upon the sovereign rating of the country where the counterparty resides regardless of the credit rating of the counterparty or the underlying collateral.

The asset manager portfolio exposures are high quality with 92% meeting our investment grade equivalent ratings criteria as of June 30, 2009. These exposures are generally short-term liquidity facilities with the vast majority to regulated mutual funds.

Edgar Filing: Bank of New York Mellon CORP - Form 10-Q

At June 30, 2009, insurance exposure in the table above included \$64 million of direct credit exposure to four monoline financial guaranty insurers, down 48% from \$122 million at Dec. 31, 2008. We also extend facilities which provide liquidity, primarily for variable rate tax exempt securities wrapped by monoline insurers. The credit approval for these facilities is based on an assessment of the underlying tax exempt issuer and is not solely dependent upon the monoline.

The Bank of New York Mellon Corporation 45

Table of Contents*Commercial*

The diversity of the commercial portfolio is shown in the following table:

Commercial portfolio exposure <i>(dollar amounts in billions)</i>	June 30, 2009					Dec. 31, 2008		
	Loans	Unfunded commitments	Total exposure	% Inv grade	% due <1 yr	Loans	Unfunded commitments	Total exposure
Media and telecom	\$ 0.9	\$ 2.0	\$ 2.9	56%	18%	\$ 1.1	\$ 2.3	\$ 3.4
Manufacturing	1.4	6.8	8.2	81	19	1.5	7.9	9.4
Energy and utilities	1.0	6.7	7.7	85	15	1.7	6.1	7.8
Services and other	1.3	8.8	10.1	81	33	2.0	8.6	10.6
Total	\$ 4.6	\$ 24.3	\$ 28.9	80%	23%	\$ 6.3	\$ 24.9	\$ 31.2

The commercial portfolio exposure decreased 7% to \$28.9 billion at June 30, 2009, from \$31.2 billion at Dec. 31, 2008, reflecting decreased exposure across all exposure categories. Our goal is to migrate towards a predominantly investment grade portfolio, with targeted exposure reductions over the next several years. Progress towards this goal has been partially offset by the current economic environment.

We continue to actively monitor automotive industry exposure given ongoing weakness in the domestic automotive industry. At June 30, 2009, total exposures in our automotive portfolio included \$145 million of secured exposure to one of the big three U.S. automotive manufacturers. This exposure was reduced 35% in the first half of 2009, reflecting paydowns. We also had \$134 million of exposure to six automotive suppliers at June 30, 2009. This exposure decreased 21% from Dec. 31, 2008 as a result of paydowns and loan sales.

The table below summarizes the percent of the financial institutions and commercial exposures that are investment grade.

Percent of the portfolios that are investment grade	Quarter ended				
	June 30, 2008	Sept. 30, 2008	Dec. 31, 2008	March 31, 2009	June 30, 2009
Financial institutions	88%	90%	90%	88%	90%
Commercial	83%	81%	80%	78%	80%

Wealth Management loans and mortgages

Wealth Management loans and mortgages are primarily composed of loans to high-net-worth individuals, which are secured by marketable securities, and jumbo mortgages. The increase in total wealth management loans and mortgages primarily relates to increased mortgage activity.

Lease financings

The leasing portfolio consisted of non-airline exposures of \$3.6 billion and \$238 million of airline exposures at June 30, 2009. Approximately 91% of the leasing exposure is investment grade, or investment grade equivalent. In the second quarter of 2009, we converted \$159 million of automotive industry lease exposure to a non-automotive direct finance lease. At June 30, 2009, we carried no automotive exposure in our leasing portfolio.

Edgar Filing: Bank of New York Mellon CORP - Form 10-Q

At June 30, 2009, our \$238 million of exposure to the airline industry consisted of a \$19 million real estate lease exposure, as well as the airline-leasing portfolio which included \$83 million to major U.S. carriers, \$122 million to foreign airlines and \$14 million to U.S. regionals.

The airline industry continued to face difficult operating conditions in the second quarter of 2009. A weaker economic outlook for the remainder of 2009 is having a dampening effect on airline financial results and aircraft values in the secondary market. Because of these factors, we continue to maintain a sizable allowance for loan losses against these exposures and to closely monitor the portfolio.

Table of Contents

We utilize the leasing portfolio as part of our tax cash flow management strategy.

Commercial real estate

Real estate facilities are focused on experienced owners and are structured with moderate leverage based on existing cash flows. Our commercial real estate lending activities include both construction facilities and medium-term loans. Our client base consists of experienced developers and long-term holders of real estate assets. Loans are approved on the basis of existing or projected cash flow, and supported by appraisals and knowledge of local market conditions. Development loans are structured with moderate leverage, and in most instances, involve some level of recourse to the developer. Our commercial real estate exposure totaled \$3.7 billion at June 30, 2009 and \$4.8 billion at Dec. 31, 2008. At June 30, 2009, we reclassified the commercial real estate portfolio at MUNB to discontinued operations. At June 30, 2009, approximately 69% of our commercial real estate portfolio was secured. The secured portfolio is diverse by project type with approximately 54% secured by residential buildings, approximately 29% secured by office buildings, approximately 9% secured by retail properties and 8% by other categories. Approximately 84% of the unsecured portfolio is allocated to real estate investment trusts (REITs) under revolving credit agreements.

At June 30, 2009, our commercial real estate portfolio was comprised of the following concentrations: New York metro 50%; investment grade REITs 30%; and other 20%.

Other residential mortgages

The other residential mortgage portfolio primarily consists of 1- 4 family residential mortgage loans. At June 30, 2009, we had less than \$15 million in subprime mortgages included in this portfolio. The subprime loans were issued to support our Community Reinvestment Act requirements.

Overdrafts

Overdrafts primarily relate to custody and securities clearance clients. Overdrafts occur on a daily basis in the custody and securities clearance business and are generally repaid within two business days.

Other loans

Other loans are composed largely of Community Development Corporation and non-mortgage Community Reinvestment Act loans.

Asset quality and allowance for credit losses

Over the past several years, we have improved our risk profile through greater focus on clients who are active users of our non-credit services, de-emphasizing broad-based loan growth. Our primary exposure to the credit risk of a customer consists of funded loans, unfunded formal contractual commitments to lend, standby letters of credit and overdrafts associated with our custody and securities clearance businesses.

The role of credit has shifted to one that complements our other services instead of as a lead product. Credit solidifies customer relationships and, through a disciplined allocation of capital, can earn acceptable rates of return as part of an overall relationship.

We have implemented an institutional credit strategy to reduce exposures that no longer meet risk/return criteria, including an assessment of overall relationship profitability. In addition, we make use of credit derivatives and other risk mitigants as economic hedges of portions of the credit risk in our portfolio. The effect of these transactions is to transfer credit risk to creditworthy, independent third parties.

Table of Contents**Allowance for credit losses**

<i>(dollar amounts in millions)</i>	June 30, 2009	March 31, 2009	Dec. 31, 2008	June 30, 2008

Total allowance for credit losses as a percent of non-margin loans	1.53%	1.47%	1.34%	1.08%

^(a) The allowance for credit losses at June 30, 2009 excludes discontinued operations. The allowance for credit losses includes discontinued operations of \$40 million at March 31, 2009, \$35 million at Dec. 31, 2008 and \$28 million at June 30, 2008. The provision for credit losses includes discontinued operations of \$21 million at March 31, 2009, \$5 million at Dec. 31, 2008 and \$12 million at June 30, 2008.

The total allowance for credit losses was \$526 million at June 30, 2009, \$559 million at March 31, 2009, \$529 million at Dec. 31, 2008 and \$486 million at June 30, 2008. The decrease in the allowance for credit losses compared with March 31, 2009 resulted from net charge-offs of \$54 million and a transfer of \$40 million of the allowance for credit losses to discontinued operations in the second quarter of 2009. The ratio of the total allowance for credit losses to non-margin loans was 1.53% at June 30, 2009, 1.47% at March 31, 2009, 1.34% at Dec. 31, 2008 and 1.08% at June 30, 2008. The ratio of the allowance for loan losses to non-margin loans was 1.27% at June 30, 2009, 1.24% at March 31, 2009, 1.05% at Dec. 31, 2008 and 0.78% at June 30, 2008. The growth in these ratios resulted from a decrease in non-margin loans and additional reserves held on higher-risk rated loans and mortgages.

We had \$3.9 billion of secured margin loans on our balance sheet at June 30, 2009 compared with \$3.5 billion at March 31, 2009. We have rarely suffered a loss on these types of loans and do not allocate any of our allowance for credit losses to them. As a result, we believe that the ratio of total allowance for credit losses to non-margin loans is a more appropriate metric to measure the adequacy of the reserve.

The allowance for loan losses and the allowance for unfunded commitments consists of three elements:

- an allowance for impaired credits (nonaccrual loans over \$1 million);
- an allowance for higher risk rated credits and pass rated credits; and
- an unallocated allowance based on general economic conditions and risk factors in our individual markets.

The first element, impaired credits, is based on individual analysis of all nonperforming loans over \$1 million. The allowance is measured by the difference between the recorded value of impaired loans and their impaired value. Impaired value is either the present value of the expected future cash flows from the borrower, the market value of the loan, or the fair value of the collateral.

Edgar Filing: Bank of New York Mellon CORP - Form 10-Q

The second element, higher risk rated credits and pass rated credits, is based on our expected loss model. Borrowers are assigned to pools based on their credit ratings. The expected loss for each loan in a pool incorporates the borrower's credit rating, loss given default rating and maturity. The loss given default incorporates a recovery expectation. The borrower's probability of default is derived from the associated credit rating. Borrower ratings are reviewed at least annually and are periodically mapped to third party databases, including rating agency and default and recovery databases, to ensure ongoing consistency and validity. Higher risk rated credits are reviewed quarterly. Commercial loans over \$1 million are individually analyzed before being assigned a credit rating. We also apply this technique to our leasing and wealth management portfolios. At our subsidiary banks that provide credit to small businesses, exposures are pooled and reserves are established based on historic portfolio losses.

Table of Contents

The third element, the unallocated allowance, is based on management's judgment regarding the following factors:

- Economic conditions including duration of the current cycle;
- Collateral values;
- Specific credits and industry conditions;
- Results of bank regulatory and internal credit exams;
- Geopolitical issues and their impact on the economy; and
- Volatility and model risk.

Based on an evaluation of these three elements, including individual credits, historical credit losses, and global economic factors, we have allocated our allowance for credit losses on a continuing operations basis as follows:

Allocation of allowance

	June 30, 2009	March 31, 2009 ^(a)	Dec. 31, 2008 ^(a)	June 30, 2008 ^(a)
for credit losses				
Commercial	67%	65%	57%	55%
Other residential mortgages	19	16	15	12
Commercial real estate	2	10	10	6
Wealth management	5	4	5	3
Foreign	1	1	1	2
Unallocated	6	4	12	22
Total	100%	100%	100%	100%

^(a) Includes discontinued operations.

The allocation of allowance for credit losses is inherently judgmental, and the entire allowance for credit losses is available to absorb credit losses regardless of the nature of the loss.

The decrease in the percentage of allowance for credit losses allocated to commercial real estate reflects the reclassification of MUNB to discontinued operations. The percentage of the unallocated allowance for credit losses was 6% at June 30, 2009, up from 4% at March 31, 2009 and down from 12% at Dec. 31, 2008 and 22% at June 30, 2008. The unallocated allowance reflects various factors in the current credit environment and is also available to, among other things, absorb further deterioration across all of our portfolios resulting from the current economic environment.

Nonperforming assets

The following table shows the distribution of non-performing assets.

Nonperforming assets

<i>(dollar amounts in millions)</i>	June 30, 2009	March 31, 2009	Dec. 31, 2008
Loans:			
Commercial real estate	\$ 58	\$ 190	\$ 124
Other residential mortgages	170	151	99
Commercial	82	65	60
Wealth management	61	4	1
Foreign	1	2	-
Total nonperforming loans	372	412	284
Other assets owned	6	9	8
Total nonperforming assets ^(a)	\$ 378	\$ 421	\$ 292
Nonperforming assets ratio	1.0%	1.0%	0.7%
Allowance for loan losses/nonperforming loans	116.7	114.1	146.1
Allowance for loan losses/nonperforming assets	114.8	111.6	142.1

Edgar Filing: Bank of New York Mellon CORP - Form 10-Q

Total allowance for credit losses/nonperforming loans	141.4	135.7	186.3
Total allowance for credit losses/nonperforming assets	139.2	132.8	181.2

^(a) *Nonperforming assets at June 30, 2009 exclude discontinued operations. Nonperforming assets at March 31, 2009 and Dec. 31, 2008 include discontinued operations of \$130 million and \$96 million, respectively.*

The sequential quarter decrease in nonperforming assets primarily resulted from the movement of \$156 million to discontinued operations and \$20 million in net charge-offs. This was partially offset by the addition of a \$58 million loan to a private wealth client, a \$17 million net increase in commercial loans driven by a \$15 million loan to a newspaper publisher, and a \$19 million net increase in other residential mortgages. Nonperforming assets are expected to increase in the third and fourth quarters of 2009. The ratio of allowance for loan losses to nonperforming assets was 114.8% at June 30, 2009 compared with 111.6% at March 31, 2009.

Commercial loans are placed on nonaccrual status when principal or interest is past due 90 days or more, or when there is reasonable doubt that interest or principal will be collected. Residential mortgage loans are generally placed on nonaccrual status, when, in our judgment, collection is in doubt or the loans are 90 days or more delinquent, subject to an impairment test. Real estate acquired in satisfaction of loans is carried in other assets at the lower of the recorded investment in the property or fair value minus estimated costs to sell. When a loan is placed on nonaccrual status, previously accrued and uncollected interest is reversed against current period interest revenue. Interest receipts on nonaccrual and impaired loans are recognized as interest revenue or are applied to principal when we believe the ultimate collectability of principal is in doubt. Nonaccrual loans generally are restored to an accrual basis when principal and interest become current.

The Bank of New York Mellon Corporation 49

Table of Contents**Nonperforming assets****quarterly activity**

<i>(in millions)</i>	June 30, 2009	March 31, 2009	Dec. 31, 2008
Balance at beginning of period	\$ 421	\$ 292	\$ 267
Additions	143	171	45
Net charge-offs	(21)	(39)	(15)
Paydowns/sales	(5)	(4)	(5)
Transferred to discontinued operations	(156)	-	-
Other	(4)	1	-
Balance at end of period	\$ 378	\$ 421	\$ 292

Loans past due 90 days or more as to principal or interest totaled \$449 million at June 30, 2009, compared with \$409 million at March 31, 2009. Past due loans at both June 30, 2009 and March 31, 2009 include loans to an asset manager that has filed for bankruptcy (see Legal proceedings). These loans are well secured, largely by cash and high grade fixed income securities, and are in the process of collection. Additionally, the increase in past due loans at June 30, 2009 compared with March 31, 2009 primarily reflects \$25 million in commercial real estate loans and \$21 million in residential mortgages.

Interest income would have increased by \$1.6 million and \$2.0 million for the second quarters of 2009 and 2008 if loans on nonaccrual status at June 30, 2009 and 2008 had been performing for the entire period. On a year-to-date basis, interest income would have increased by \$5.4 million and \$5.0 million for 2009 and 2008 had loans on nonaccrual status been performing for the entire period.

Impaired loans

The following table sets forth information about our impaired loans. We use the discounted cash flow, collateral value, or market price methods for valuing our impaired loans.

Impaired loans

<i>(in millions)</i>	June 30, 2009	March 31, 2009	Dec. 31, 2008	June 30, 2008
Impaired loans with an allowance	\$ 200	\$ 240	\$ 165	\$ 186
Impaired loans without an allowance ^(a)	1	27	21	25
Total impaired loans	\$ 201	\$ 267	\$ 186	\$ 211
Allowance for impaired loans ^(b)	\$ 41	\$ 68	\$ 51	\$ 37
Average balance of impaired loans during quarter	124	50	178	136

^(a) When the discounted cash flows, collateral value or market price equals or exceeds the carrying value of the loan, then the loan does not require an allowance under the accounting standard related to impaired loans.

^(b) The allowance for impaired loans is included in the allowance for loan losses.

Deposits

Total deposits were \$130.6 billion at June 30, 2009, compared with \$159.7 billion at Dec. 31, 2008. The decrease in deposits reflects a continued roll-off of client cash that sought a safe haven during the credit crisis.

Noninterest-bearing deposits were \$36.1 billion at June 30, 2009, compared with \$55.8 billion at Dec. 31, 2008. Interest-bearing deposits were \$94.5 billion at June 30, 2009, compared with \$103.9 billion at Dec. 31, 2008.

Support agreements

We voluntarily provided support to clients invested in money market mutual funds, cash sweep funds and similar collective funds, managed by our affiliates. The support agreements relate primarily to the BNY Mellon Institutional Cash Reserve Fund used for the reinvestment of cash collateral within our securities lending business and four Dreyfus money market funds.

Edgar Filing: Bank of New York Mellon CORP - Form 10-Q

These support agreements are designed to enable these funds to continue to operate at a stable share price of \$1.00. In the second quarter of 2009, we recorded a credit to support agreement charges of \$15 million (pre-tax). This credit reflects a reduction in the support agreement reserve primarily due to improved pricing of Lehman Brothers (Lehman) securities. At June 30, 2009, the value of Lehman increased to 14.75% from 12.5% at March 31, 2009.

At June 30, 2009, our additional potential maximum exposure to support agreements was approximately \$266 million, based on the securities subject to these agreements being valued at zero and the NAV of the

Table of Contents

related funds declining below established thresholds. This exposure includes agreements covering Lehman securities (\$215 million) as well as other client agreements (\$51 million).

Liquidity and dividends

We maintain our liquidity through the management of our assets and liabilities, utilizing worldwide financial markets. The diversification of liabilities reflects our efforts to maintain flexibility of funding sources under changing market conditions. Stable core deposits from our institutional services and wealth management businesses are generated through our diversified network and managed with the use of trend studies and deposit pricing. The use of derivative products such as interest rate swaps and financial futures enhances liquidity by enabling us to issue long-term liabilities with limited exposure to interest rate risk. Liquidity also results from the maintenance of a portfolio of assets that can be easily sold and the monitoring of unfunded loan commitments, thereby reducing unanticipated funding requirements. Unrealized losses in the securities portfolio have not had an adverse impact on our liquidity. Liquidity is managed on both a consolidated basis and at The Bank of New York Mellon Corporation parent company (Parent).

At June 30, 2009, we had approximately \$47 billion of liquid funds and \$20 billion of cash (including approximately \$16 billion on deposit with the Federal Reserve and other central banks) for a total of approximately \$67 billion of available funds. This compares with available funds of \$105 billion at Dec. 31, 2008. Our liquid assets to total assets were 33% at June 30, 2009, compared with 44% at Dec. 31, 2008. This decrease reflects lower cash balances, primarily deposits with the Federal Reserve and other central banks, resulting from the decline in noninterest-bearing deposits as client cash that sought a safe haven during the credit crisis continued to roll-off.

On an average basis for the first six months of 2009 and 2008, non-core sources of funds such as money market rate accounts, certificates of deposits greater than \$100,000, federal funds purchased and other borrowings were \$25.4 billion and \$22.0 billion, respectively. The increase primarily reflects a higher

level of money market rate accounts, partially offset by lower levels of federal funds purchased and certificates of deposits greater than \$100,000. Average foreign deposits, primarily from our European-based securities servicing business, were \$74.4 billion and \$69.8 billion for the first six months of 2009 and 2008, respectively. The increase in foreign deposits reflects greater liquidity from our corporate trust and asset servicing businesses. Domestic savings and other time deposits averaged \$6.0 billion for the first six months of 2009, compared with \$8.3 billion for the first six months of 2008. The first half of 2008 included a large government agency deposit.

Average payables to customers and broker-dealers were \$4.4 billion for the first six months of 2009 and \$5.2 billion for the first six months of 2008. Long-term debt averaged \$16.1 billion and \$17.0 billion for the first six months of 2009 and 2008, respectively. The decrease in long-term debt reflects maturities and our strong liquidity position. Average noninterest-bearing deposits increased to \$37.9 billion in the first six months of 2009 from \$25.0 billion in the first six months of 2008, primarily reflecting a significant increase in customer deposits in late 2008, reflecting a flight to quality. As expected, these deposits rolled-off during the first half of 2009. A significant reduction in our securities servicing businesses would reduce our access to deposits.

The Parent has five major sources of liquidity:

- cash on hand;
- dividends from its subsidiaries;
- the commercial paper market;
- a revolving credit agreement with third party financial institutions; and
- access to the capital markets.

Restrictions on our ability to obtain funds from our subsidiaries are discussed in more detail in Note 22 to the Notes to Consolidated Financial Statements contained in the Company's 2008 Annual Report on Form 10-K.

At June 30, 2009, our bank subsidiaries had the ability to pay dividends of approximately \$2.4 billion to the Parent without the need for a regulatory waiver. This dividend capacity would increase in the remainder of 2009 to the extent of the banks' net income less dividends. At June 30, 2009, nonbank

Table of Contents

subsidiaries of the Parent had liquid assets of approximately \$1.1 billion. These assets could be liquidated and the proceeds delivered by dividend or loan to the Parent.

For the quarter ended June 30, 2009, the Parent's quarterly average commercial paper borrowings were \$263 million compared with \$29 million for the quarter ended June 30, 2008. The Parent had cash of \$4.6 billion at June 30, 2009 compared with \$5.0 billion at Dec. 31, 2008. Commercial paper outstandings issued by the Parent were \$272 million and \$16 million at June 30, 2009 and Dec. 31, 2008, respectively. Net of commercial paper outstanding, the Parent's cash position at June 30, 2009 decreased by \$641 million compared with Dec. 31, 2008 reflecting the repurchase of the preferred stock issued to the Treasury as part of TARP primarily offset by the common stock and debt offerings in the second quarter of 2009. The Parent's liquidity target is to have sufficient cash on hand to meet its obligations over the next 12 months without the need to take dividends from its banks or issue debt.

We currently have a \$226 million credit agreement with 10 financial institutions that matures in October 2011. The fee on this facility depends on our credit rating and at June 30, 2009 was 6 basis points. The credit agreement requires us to maintain:

- shareholders' equity of \$5 billion;
- a ratio of Tier 1 capital plus the allowance for credit losses to nonperforming assets of at least 2.5;
- a double leverage ratio less than 1.3; and
- adequate capitalization of all our banks for regulatory purposes.

We are currently in compliance with these covenants. There were no borrowings under this facility at June 30, 2009.

We also have the ability to access the capital markets. In July 2007, we filed an S-3 shelf registration statement with the SEC covering the issuance of an unlimited amount of debt, common stock, preferred stock and trust preferred securities.

Access to the capital markets is partially dependent on our credit ratings, which, as of June 30, 2009 were as follows:

Debt ratings at June 30, 2009

	Moody's	Standard & Poor's	Fitch	Dominion Bond Rating Service
Parent:				
Long-term senior debt	Aa2	AA-	AA-	AA (low)
Subordinated debt	Aa3	A+	A+	A (high)
The Bank of New York Mellon:				
Long-term senior debt	Aaa	AA	AA-	AA
Long-term deposits	Aaa	AA	AA	AA
BNY Mellon, N.A.:				
Long-term senior debt	Aaa	AA	AA-	AA
Long-term deposits	Aaa	AA	AA	AA
Outlook	Stable	Stable	Stable	Stable (long-term)

In July 2009, the rating agencies affirmed all of the ratings of the Company and its subsidiaries.

Edgar Filing: Bank of New York Mellon CORP - Form 10-Q

The Parent's major uses of funds are payment of dividends, principal and interest on its borrowings, acquisitions and additional investments in its subsidiaries.

The Parent has \$725 million of long-term debt that will become due in 2009 subsequent to June 30, 2009. The Parent has the option to call \$838 million of subordinated debt in the remainder of 2009, which it expects to call and refinance if market conditions are favorable.

In the second quarter of 2009, the Company issued 48 million common shares, at \$28.75 per share, for a total of \$1.4 billion.

Also in the second quarter of 2009, we issued \$1.5 billion of senior debt comprised of:

\$1 billion of 5-year senior medium-term notes at a rate of 4.3%. These notes will mature in May 2014; and

\$500 million of 10-year senior medium-term notes at a rate of 5.45%. These notes will mature in May 2019.

These senior medium term notes are not guaranteed under the FDIC's Temporary Liquidity Guarantee Program.

In June 2009, the Company repurchased the 3 million shares of its Series B preferred stock issued to the U.S. Treasury in October 2008 as part of TARP. The

Table of Contents

Company paid the U.S. Treasury \$3.0 billion, which reflects the liquidation value of the preferred stock.

On August 5, 2009, the Company repurchased the warrant issued to the U.S. Treasury in connection with the TARP Capital Purchase Program. The repurchase price was \$136 million. The impact of the repurchase was to reduce the Company's Tier 1 Capital ratio by 11 basis points.

In the second quarter of 2009, \$300 million of the Company's senior debt matured.

We have \$850 million of junior subordinated debentures that are callable in 2009. These securities qualify as Tier 1 capital. We have not yet decided if we will call these securities. The decision to call will be based on interest rates, the availability of cash and capital, and regulatory conditions. If we call the trust preferred securities, we expect to replace them with new trust preferred securities or senior or subordinated debt. See discussion of qualification of trust preferred securities as capital in Capital.

The double leverage ratio is the ratio of investment in subsidiaries divided by our consolidated equity plus trust preferred securities. Our double leverage ratios at June 30, 2009 and 2008 were 103.48% and 102.53%, respectively. Our target double leverage ratio is a maximum of 120%. The double leverage ratio is monitored by regulators and rating agencies and is an important constraint on our ability to invest in our subsidiaries and to expand our businesses.

Pershing LLC, an indirect subsidiary of the Company, has committed and uncommitted lines of credit in place for liquidity purposes. The committed line of credit of \$805 million with 14 financial institutions matures in March 2010. In the second quarter of 2009, the average borrowing against this line of credit was \$9 million. Additionally, Pershing has another committed line of credit for \$125 million extended by one financial institution that matures in September 2009. The average borrowing against this line of credit was \$31 million during the second quarter of 2009. Pershing LLC has five separate uncommitted lines of credit amounting to \$1.125 billion in aggregate. Average daily borrowing under these lines was \$56 million, in aggregate, during the second quarter of 2009.

Pershing Limited, an indirect U.K.-based subsidiary of the Company, has committed and uncommitted

lines of credit in place for liquidity purposes which are guaranteed by the Parent. The committed line of credit of \$171 million is with three financial institutions and matures in March 2010. In the second quarter of 2009, there were no borrowings against these lines of credit. Pershing Limited has three separate uncommitted lines of credit amounting to \$250 million in aggregate. Average daily borrowing under these lines was \$11 million, in aggregate, during the second quarter of 2009.

Statement of cash flows

Cash provided by operating activities was \$0.3 billion for the first six months of 2009, compared with \$1.9 billion for the six months ended June 30, 2008. In the first six months of 2009, earnings, partially offset by changes in trading activities, accruals and other balances were a significant source of funds. Cash flows from operations in the first six months of 2008 were principally the result of increased earnings.

In the first six months of 2009, cash provided by investing activities was \$30.9 billion compared with \$10.3 billion used for investing activities in the first six months of 2008. In the first six months of 2009, a decrease in interest-bearing deposits with banks and the Federal Reserve and other central banks was a significant source of funds, partially offset by purchases of securities available for sale. In the first six months of 2008, change in federal funds sold and securities purchased under resale agreements, purchases of securities available-for-sale and change in interest-bearing deposits with banks were a significant use of funds.

Through June 30, 2009, cash used for financing activities was \$32.2 billion, compared to \$7.7 billion provided by financing for the first six months of 2008. In the first six months of 2009, decreases in deposits, other borrowed funds and the repurchase of the Series B preferred stock were significant uses of funds, partially offset by proceeds from the issuance of long-term debt and common stock. In the first six months of 2008, deposits were a significant source of funds, partially offset by a decrease in commercial paper outstanding and the repayment of long-term debt.

Common shares outstanding	1,202,828	1,153,450	1,148,467	1,146,070

^(a) The Company's consolidated target minimum Tier 1 capital ratio is 10.0%.

^(b) The Tier 1 capital ratio, excluding the Series B preferred stock, was 11.2% at March 31, 2009.

^(c) See supplemental information beginning on page 59 for the calculation of this ratio.

The decrease in total shareholders equity compared with Dec. 31, 2008 primarily resulted from the repurchase of the Series B preferred stock issued to the U.S. Treasury in October 2008 and an increase in the unrealized net of tax loss on our securities available for sale portfolio, partially offset by the common stock offering of 48 million shares (\$1.4 billion) in May of 2009 and the retention of earnings. During the first six months of 2009, retained earnings increased \$778 million. The unrealized net of tax loss at June 30, 2009 was \$4.4 billion compared with \$4.5 billion at March 31, 2009 and \$4.1 billion at Dec. 31, 2008. The improvement in the net of tax loss on our securities portfolio from March 31, 2009, reflects the tightening of spreads, partially offset by higher interest rates and the impact of SFAS 157-4 (ASC-820-10).

In July 2009, we declared a quarterly common stock dividend of \$0.09 per common share that will be paid on Aug. 11, 2009, to shareholders of record as of the close of business on Aug. 3, 2009.

Our Tier 1 capital ratio was 12.5% at June 30, 2009, compared with 13.8% at March 31, 2009 and 13.2% at Dec. 31, 2008. The decrease from March 31, 2009 primarily reflects the repurchase of Series B preferred stock issued as part of TARP offset by the issuance of common shares in May 2009 and earnings retention.

The Tier 1 capital ratio varies depending on the size of the balance sheet at quarter-end and the level and types of investments. The balance sheet size fluctuates from quarter to quarter based on levels of customer and market activity. In general, when servicing clients are more actively trading securities, deposit balances and the balance sheet as a whole are higher.

At June 30, 2009, our total assets were \$203.0 billion compared with \$237.5 billion at Dec. 31, 2008. The decrease in the balance sheet from Dec. 31, 2008 had an immaterial impact on risk-weighted assets as the decrease was in lower risk-weighted government investments.

Edgar Filing: Bank of New York Mellon CORP - Form 10-Q

A billion dollar change in risk-weighted assets changes the Tier 1 capital ratio by approximately 10 basis points while a \$100 million change in common shareholders' equity changes the Tier 1 capital ratio by approximately 8 basis points.

In a non-taxable business combination, deferred tax liabilities are recorded in relation to identifiable intangible assets. The recording of this deferred tax liability results in an increase in goodwill equal to

Table of Contents

the amount of the deferred tax liability. Bank regulators and rating agencies adjust total shareholders' equity upward for the amount of this deferred tax liability since it is a liability for accounting purposes and will never require a cash settlement unless a sale occurs.

Regulatory agencies allow tax deductible goodwill, which must be deducted from Tier 1 capital, to be reduced by the amount of any associated deferred tax liability. This permits banking organizations to reflect the maximum exposure to loss in the event such goodwill is impaired or no longer recognized for financial reporting purposes. The deferred tax liability associated with the Company's deductible goodwill was \$643 million at June 30, 2009.

Our tangible common shareholders' equity to tangible assets ratio was 4.8% at June 30, 2009, up from 4.2% at March 31, 2009 and 4.6% at Dec. 31, 2008. The increase compared with both periods reflects the \$1.4 billion common stock offering in the second quarter of 2009.

Troubled Asset Relief Program

On Oct. 14, 2008, the U.S. government announced the Troubled Assets Relief Program (TARP) Capital Purchase Program (CPP) authorized under the Emergency Economic Stabilization Act (EESA). The intention of this program is to encourage U.S. financial institutions to build capital, to increase the flow of financing to U.S. businesses and consumers and to support the U.S. economy.

As part of this program, on Oct. 28, 2008, we issued 3 million shares of Fixed Rate Cumulative Perpetual Preferred Stock, Series B and a warrant for common stock to the U.S. Treasury.

The \$3 billion proceeds received from the U.S. Treasury were allocated between the Fixed Rate Cumulative Perpetual Preferred Stock Series B and the warrant for common stock based on the relative fair values of the preferred stock and warrant at the time of issuance. The proceeds were allocated 92.65% (\$2.779 billion) to the preferred stock and 7.35% (\$221 million) to the warrant.

The estimated fair value of the preferred stock was determined using a dealer quote and a pricing simulation model that

valued the preferred stock as a long-dated fixed income instrument based on option adjusted spreads of similar instruments. The analysis determined a market rate for the preferred stock would be 11.43%. The estimated fair value of the warrant was calculated using a trinomial pricing model. The input assumptions to this model were 40% volatility, 10 year life, risk-free rate of 4.30% and dividend yield of 3.1%.

In June 2009, the Company repurchased the 3 million shares of its preferred stock issued to the U.S. Treasury in October 2008. The Company paid the U.S. Treasury \$3.0 billion, which reflects the liquidation value of the preferred stock, and approximately \$36 million of unpaid dividends accrued through the repurchase date.

Related to this repurchase, the Company recorded an after-tax redemption charge of \$196.5 million in the second quarter of 2009, representing the difference between the amortized cost of the preferred stock and the repurchase price.

Including the approximately \$36 million of dividends paid in connection with the repurchase, the Company paid the U.S. Treasury an aggregate of approximately \$95 million in dividends on the Series B preferred shares since Oct. 28, 2008.

On Aug. 5, 2009, the Company repurchased the warrant issued to the U.S. Treasury in connection with the TARP Capital Purchase Program. The warrant was for 14,516,129 shares of our common stock. The repurchase price was \$136 million. The impact of the repurchase was to reduce the Company's Tier 1 Capital ratio by 11 basis points.

Capital adequacy

Regulators establish certain levels of capital for bank holding companies and banks, including the Company and our bank subsidiaries, in accordance with established quantitative measurements. For the Parent to maintain its status as a financial holding company, our bank subsidiaries must, among other things, qualify as well capitalized. In addition, major bank holding companies such as the Parent are expected by the regulators to be well capitalized.

Table of Contents

As of June 30, 2009 and Dec. 31, 2008, the Parent and our bank subsidiaries were considered well capitalized on the basis of the ratios (defined by regulation) of Total and Tier 1 capital to risk-weighted assets and leverage (Tier 1 capital to average assets). The consolidated and primary bank subsidiary capital ratios are shown below:

Consolidated and primary bank subsidiary capital ratios ^(a)

	June 30, 2009		Dec. 31, 2008		June 30, 2008	
	Consolidated	The Bank of New York Mellon	Consolidated	The Bank of New York Mellon	Consolidated	The Bank of New York Mellon
Tier 1 ^(b)	12.5%	11.8%	13.2%	11.2%	9.3%	8.6%
Total capital ^(b)	16.0	15.1	16.9	14.7	12.9	12.2
Leverage	7.6	7.6	6.9	5.9	6.4	5.4

(a) For a banking institution to qualify as well capitalized, its Tier 1, Total (Tier 1 plus Tier 2) and leverage capital ratios must be at least 6%, 10% and 5%, respectively. To qualify as adequately capitalized, Tier 1, Total and leverage capital ratios must be at least 4%, 8% and 3%, respectively.

(b) Tier 1 capital consists, generally, of common equity, trust-preferred securities (subject to limitations beginning in March 2009), and certain qualifying preferred stock less goodwill and most other intangibles, net of associated deferred tax liabilities. Total capital consists of Tier 1 capital plus Tier 2 capital. Tier 2 capital consists, generally, of certain qualifying preferred stock and subordinated debt and a portion of the allowance for credit losses.

At June 30, 2009, we had approximately \$1.7 billion of trust preferred securities outstanding, net of issuance costs. All of our trust-preferred securities qualified as Tier 1 capital at June 30, 2009.

The following table presents the components of our risk-based capital and risk-adjusted assets at June 30, 2009, Dec. 31, 2008 and June 30, 2008, respectively.

Trading activities and risk management

Our trading activities are focused on acting as a market maker for our customers. The risk from these market making activities and from our own positions

is managed by our traders and limited in total exposure as described below.

We manage trading risk through a system of position limits, a value-at-risk (VAR) methodology based on a Monte Carlo simulation, stop loss advisory

Table of Contents

triggers, and other market sensitivity measures. Risk is monitored and reported to senior management by a separate unit on a daily basis. Based on certain assumptions, the VAR methodology is designed to capture the potential overnight pre-tax dollar loss from adverse changes in fair values of all trading positions. The calculation assumes a one-day holding period for most instruments, utilizes a 99% confidence level, and incorporates the non-linear characteristics of options. The VAR model is the basis for the economic capital calculation, which is allocated to lines of business for computing risk-adjusted performance.

As the VAR methodology does not evaluate risk attributable to extraordinary financial, economic or other occurrences, the risk assessment process includes a number of stress scenarios based upon the risk factors in the portfolio and management's assessment of market conditions. Additional stress scenarios based upon historical market events are also performed. Stress tests, by their design, incorporate the impact of reduced liquidity and the breakdown of observed correlations. The results of these stress tests are reviewed weekly with senior management.

The following tables indicate the calculated VAR amounts for the trading portfolio for the periods indicated:

VAR ^(a) (in millions)	2nd Quarter 2009			June 30, 2009

^(a) VAR figures do not reflect the impact of the credit valuation adjustments resulting from the adoption of SFAS 157 (ASC-820-10).

N/M Because the minimum and maximum may occur on different days for different risk components, it is not meaningful to compute a portfolio diversification effect.

During the second quarter of 2009, interest rate risk generated 35% of average VAR, credit risk generated 28% of average VAR, foreign exchange risk generated 20% of average VAR and equity risk generated 17% of average VAR. During the second quarter of 2009, our daily trading loss did not exceed our calculated VAR amount on any given day.

The Company monitors a volatility index of global currency using a basket of 30 major currencies. In 2008, the volatility of this index was above median for most of the year and significantly above median in the fourth quarter. In the first half of 2009, the volatility of this index decreased from the abnormally high levels experienced in the fourth quarter of 2008.

The volatility in the markets throughout 2008 and the first half of 2009 has caused the number of days when our trading revenue exceeded \$5 million to remain at an elevated level.

The following table of total daily revenue or loss captures trading volatility and shows the number of trading days in which our trading revenues fell within particular ranges during the past year.

Table of Contents**Distribution of revenues**

<i>(in millions)</i>	June 30, 2008	Sept. 30, 2008	Quarter ended		June 30, 2009
			Dec. 31, 2008	March 31, 2009

More than \$5.0	25	33	41	33	26

Foreign exchange and other trading

Under our mark to market methodology for derivative contracts, an initial risk-neutral valuation is performed on each position assuming time-discounting based on an AA credit curve. In addition, we consider credit risk in arriving at the fair value of our derivatives.

As required by SFAS 157 (ACS 820-10), in the first quarter of 2008 we began to reflect external credit ratings as well as observable credit default swap spreads for both ourselves as well as our counterparties when measuring the fair value of our derivative positions.

Accordingly, the valuation of our derivative positions is sensitive to the current changes in our own credit spreads, as well as those of our counterparties. In addition, in cases where a counterparty is deemed impaired, further analyses are performed to value such positions.

At June 30, 2009, our over-the-counter (OTC) derivative assets of \$5.6 billion included a credit valuation adjustment (CVA) deduction of \$129 million, including \$65 million related to the declining credit quality of CDO counterparties. Our OTC derivative liabilities of \$4.9 billion included \$38 million of debit valuation adjustments (DVA) related to our own credit spread. Adjustments to the CVA and DVA decreased foreign exchange and other trading activities revenue by \$26 million in the second quarter of 2009 and \$45 million in the first six months of 2009. Adjustments to our own credit spread increased foreign exchange and other trading activities revenue by \$22 million in the second quarter of 2009 and decreased foreign exchange and other trading activities revenue by \$6 million in the first half of 2009.

The table below summarizes the risk ratings for our foreign exchange, interest rate and equity derivative counterparty credit exposure. The increase in the AAA to AA- rating category resulted from hedging transactions entered into with highly rated counterparties following a heightened level of debt issuances by these counterparties in the second quarter of 2009.

Foreign exchange and other trading-

counterparty risk ratings profile ^(a)	June 30, 2008	Sept. 30, 2008	Dec. 31, 2008	March 31, 2009	June 30, 2009

^(a) Represents credit rating agency equivalent of internal credit rating.

Asset/liability management

Our diversified business activities include processing securities, accepting deposits, investing in securities, lending, raising money as needed to fund assets, and other transactions. The market risks from these activities are interest rate risk and foreign exchange risk. Our primary market risk is exposure to movements in U.S. dollar interest rates and certain foreign currency interest rates. We actively manage

interest rate sensitivity and use earnings simulation and discounted cash flow models to identify interest rate exposures.

An earnings simulation model is the primary tool used to assess changes in pre-tax net interest revenue. The model incorporates management's assumptions regarding interest rates, balance changes on core deposits, market spreads, changes in prepayment behavior of loans and securities and the impact of

Table of Contents

derivative financial instruments used for interest rate risk management purposes.

These assumptions have been developed through a combination of historical analysis and future expected pricing behavior and are inherently uncertain. As a result, the earnings simulation model cannot precisely estimate net interest revenue or the impact of higher or lower interest rates on net interest revenue. Actual results may differ from projected results due to timing, magnitude and frequency of interest rate changes, and changes in market conditions and management's strategies, among other factors.

We evaluate the effect on earnings by running various interest rate ramp scenarios from a baseline scenario. These scenarios are reviewed to examine the impact of large interest rate movements. Interest rate sensitivity is quantified by calculating the change in pre-tax net interest revenue between the scenarios over a 12-month measurement period.

The following table shows net interest revenue sensitivity for the Company:

Estimated changes in net interest revenue

at June 30, 2009

(dollar amounts in millions)

	\$	Sensitivity %
up 200 bps vs. baseline	\$ 397	14.0%
up 100 bps vs. baseline	275	9.7%

bps basis points.

The baseline scenario's Fed Funds rate in the June 30, 2009 analysis was 0.25%. The 100 basis point ramp scenarios assume short-term rates change 25 basis points in each of the next four quarters and the 200 basis point ramp scenario assumes a 50 basis point per quarter change. Both the up 100 basis point and the up 200 basis point June 30, 2009 scenarios assume a steepening of the yield curve with 10-year rates rising 67 and 167 basis points, respectively.

These scenarios do not reflect strategies that management could employ to limit the impact as interest rate expectations change. The previous table relies on certain critical assumptions regarding the balance sheet and depositors' behavior related to interest rate fluctuations and the prepayment and extension risk in certain of our assets. To the extent that actual behavior is different from that assumed in the models, there could be a change in interest rate sensitivity.

Off-balance-sheet financial instruments

A summary of our off-balance sheet credit transactions, net of participations, at June 30, 2009 and Dec. 31, 2008 follows:

Off-balance sheet credit risks

(in millions)	June 30, 2009	Dec. 31, 2008
Lending commitments (a)	\$ 34,706	\$ 38,822
Standby letters of credit (b)	12,394	13,084
Commercial letters of credit	940	705
Securities lending indemnifications	289,864	325,975
Support agreements	266	244

Edgar Filing: Bank of New York Mellon CORP - Form 10-Q

(a) Net of participations totaling \$789 million at June 30, 2009 and \$986 million at Dec. 31, 2008.

(b) Net of participations totaling \$2.7 billion at both June 30, 2009 and Dec. 31, 2008.

For information regarding off-balance sheet financial instruments, see Note 19 to the Notes to Consolidated Financial Statements.

Supplemental information Explanation of

Non-GAAP financial measures

The Company has included in this Form 10-Q certain Non-GAAP financial measures based upon tangible common shareholders' equity. The Company believes that the ratio of tangible common shareholders' equity to tangible assets is a measure of capital strength that adds additional useful information to investors supplementing the Tier 1 capital ratio which is utilized by regulatory authorities. Unlike the Tier 1 ratio, the tangible common shareholders' equity ratio fully incorporates those changes in securities valuations which are reflected in shareholders' equity. In addition, this ratio is expressed as a percentage of the actual book value of assets, as opposed to a percentage of a risk-based reduced value established in accordance with regulatory requirements, although the Company in its calculation has excluded certain assets which are given a zero percent risk weighting for regulatory purposes. This ratio is also informative to investors in the Company's common stock because, unlike the Tier 1 capital ratio, it excludes preferred stock and trust preferred securities issued by the Company. Further, the Company believes that the return on tangible common equity measure, which excludes goodwill and intangible assets net of deferred tax liability, is a useful additional measure for investors because it presents a measure of the Company's performance in reference to those assets which are productive in generating income.

The Bank of New York Mellon Corporation 59

Table of Contents

The Company has also provided a measure of tangible book value per share which it believes provides additional useful information as to level of such assets in relation to shares of common stock outstanding. The Company has presented revenue measures which exclude the effect of investment write-downs and a SILO charge; expense measures which exclude an FDIC special assessment, M&I expenses and intangible amortization expenses; and measures which utilize net income excluding tax items such as the benefit of tax settlements. Return on equity measures and operating margin measures which exclude some or all of these items are also presented. The Company believes that these measures are useful to investors because they permit a focus on period to period comparisons which relate to the ability of the Company to enhance revenues and limit expenses in circumstances where such matters are within the Company's control. M&I expense relates to our Corporate Trust Acquisition in 2006 and to the merger with Mellon Financial Corporation in 2007. M&I expenses generally continue for approximately three years after the transaction, and can vary on a year-to-year basis depending on the stage of the integration. The Company believes that the exclusion of M&I provides investors with a focus on the Company's business as it would appear on a consolidated going-forward basis, after such M&I expenses have ceased, typically after approximately three years. Future periods will not reflect such M&I expenses, and thus may be more easily compared to our current results if M&I is excluded. With regards to the exclusion of investment write-downs, the Company's primary businesses are Asset and Wealth Management and Institutional Services. The management of these

sectors is evaluated on the basis of the ability of these businesses to generate fee and interest revenue and to control expenses, and not on the results of the Company's investment portfolio. Management of the investment portfolio is a shared service contained in the Other segment. The primary objective of the investment portfolio is to generate net interest income from the liquidity generated by the Company's processing businesses. The Company does not generally originate or trade the securities in the investment portfolio. As a result, the Company believes that presenting measures which exclude investment write-downs from its results, as a supplement to GAAP information, gives investors a clearer picture of the results of its primary businesses. The excluded items in general relate to situations where accounting rules require certain ongoing charges as a result of prior transactions, or where valuation or other accounting/regulatory requirements require charges unrelated to operational initiatives. The SILO charge relates to a one-time settlement with the IRS of tax structured lease transactions in 2008. In this Form 10-Q, certain amounts are presented on an FTE basis. We believe that this presentation provides comparability of amounts arising from both taxable and tax exempt sources, and is consistent with industry practice. The adjustment to an FTE basis has no impact on net income.

Each of these measures as described above is used by management to monitor financial performance, both on a Company-wide and on a business segment basis.

Recent accounting developments*FSP SFAS No. 132(R)-1 (ASC 715-20) Disclosures about post-retirement benefit plan assets*

In December 2008, the FASB issued FSP SFAS No. 132(R)-1 (ASC 715-20), *Employers' Disclosures about Post-retirement Benefit Plan Assets* (SFAS 132 (R)-1). This FSP amends SFAS 132 (ASC 230-10) to provide users of financial statements with useful, transparent and timely information about the asset portfolios of post-retirement benefit plans. These amended disclosure requirements include: a principle for disclosing the fair value of categories of plan assets; categories of plan assets; the nature and amounts of concentrations of risk; and disclosures about fair value measurements similar to those required by SFAS 157 (ASC 820-10). These disclosure requirements will be effective Dec. 31, 2009.

SFAS No. 166 Accounting for Transfers of Financial Assets

In June 2009, the FASB issued SFAS No. 166, *Accounting for Transfers of Financial Assets*, an amendment of FASB Statement No. 140. This statement removed (1) the concept of a qualifying special purpose entity (QSPE) from SFAS No. 140 (ASC 860-40) and (2) the exceptions from applying FIN No. 46 (R) (ASC 810-10) to QSPEs. This statement amends SFAS No. 140 (ASC 860-40) to revise and clarify the derecognition requirements for transfers of financial assets and the initial measurement of beneficial interests that we received as proceeds by a transferor in connection with transfers of financial assets. This statement also enhances the disclosure requirements to provide users of financial statements with greater transparency about transfers of financial assets and a transferor's continuing involvement with such transferred financial assets. This statement will be effective Jan. 1, 2010, at

which time any QSPEs will be evaluated for consolidation in accordance with SFAS No. 167, which amends FIN 46 (R) (ASC 810-10). However, the amendments on how to account for transfers of financial assets will apply prospectively to transfers occurring on or after the effective date. This statement is not expected to have a significant impact on the Company.

SFAS No. 167 Amendments to FIN No. 46(R)(ASC 810-10)

In June 2009, the FASB issued SFAS No. 167, *Amendments to FASB Interpretation No. 46(R)*. This statement amends FIN No. 46(R) (ASC 810-10) to require ongoing assessments to determine whether an entity is a variable interest entity (VIE) and whether an enterprise is the primary beneficiary of a VIE. This statement also amends the guidance for determining which enterprise, if any, is the primary beneficiary of a VIE by requiring the enterprise to initially perform a qualitative analysis to determine if the enterprise's variable interest or interests give it a controlling financial interest. Consolidation is based on a company's ability to direct the activities of the entity that most significantly impact the entity's economic performance. If a company has control and the right to receive benefits or the obligation to absorb losses which could potentially be significant to the VIE, then consolidation is required. This statement also requires enhanced disclosures about an enterprise's involvement in a VIE, including a requirement for sponsors of a VIE to disclose information even if they do not hold a significant variable interest in the VIE. This statement is effective Jan. 1, 2010. This new standard is expected to primarily impact our asset management businesses and our securities lending business. The new standard does not change the economic risk related to these businesses and therefore, the Company will not be required to hold additional economic capital against these

Table of Contents

instruments. We are currently evaluating the impact of this guidance on the Company's potential VIEs and the possible consolidation impact on our financial statements. At this point, the impact is uncertain because standard-setting agencies and industry groups have not completed their interpretation of this standard. Nevertheless, the new standard is expected to increase the size of our balance sheet. The impact on regulatory capital ratios will depend on how regulatory authorities modify capital standards. The Federal Reserve Board has suggested that financial institutions consider the full impact when conducting capital planning and assess whether additional capital may be necessary to support risks associated with vehicles affected by the new accounting standards. The Federal Reserve is reviewing regulatory capital requirements associated with the adoption of the new accounting standards.

SFAS No. 168 (ASC 105-10) FASB Accounting Standards Codification

In June 2009, the FASB issued SFAS No. 168 (ASC 105-10), *The FASB Accounting Standards CodificationTM and the Hierarchy of Generally Accepted Accounting Principles*, (SFAS 168). SFAS 168 (ASC 105-10) replaces SFAS 162 and establishes the FASB Accounting Standards CodificationTM (Codification) as the source of authoritative accounting principles recognized by the FASB to be applied by non-governmental entities in the preparation of financial statements in conformity with GAAP. Rules and interpretive releases of the Securities and Exchange Commission (the SEC) under authority of federal securities laws are also sources of authoritative GAAP for SEC registrants. The Codification will become the exclusive authoritative reference at Sept. 30, 2009. In this Form 10-Q, we disclose a dual presentation of the Codification and the former reference.

Exposure Draft Credit Quality of Financing Receivables and Allowance for Credit Losses

In June 2009, the FASB issued an Exposure Draft of a proposed statement, *Disclosures about the Credit Quality of Financing Receivables and the Allowance for Credit Losses*. This proposed statement would require enhanced disclosures about the allowance for credit losses and the credit quality of financing receivables. This proposed statement defines two

levels of desegregation—portfolio segment and class of financing receivable. Under this proposal, there are six major categories of disclosures; allowance for credit losses, roll-forward schedules of financing receivables, fair value, credit quality information, impaired financing receivables and nonaccrual status. The disclosures for the allowance for credit losses, roll-forward schedules of the allowance for credit losses and for financing receivables, and fair value are expected to be disaggregated by portfolio segment. The disclosures for credit quality information, impaired financing receivables, and nonaccrual status are further disaggregated by class. These disclosures would be required in interim and annual financial statements. This proposed statement would be effective Dec. 31, 2009. We are currently evaluating the impact of this proposed statement.

IFRS

International Financial Reporting Standards (IFRS) are a set of standards and interpretations adopted by the International Accounting Standards Board. The SEC is currently considering a potential IFRS adoption process in the U.S., which would, in the near term, provide domestic issuers with an alternative accounting method and ultimately could replace U.S. GAAP reporting requirements with IFRS reporting requirements. The intention of this adoption would be to provide the capital markets community with a single set of high-quality, globally accepted accounting standards. The adoption of IFRS for U.S. companies with global operations would allow for streamlined reporting, allow for easier access to foreign capital markets and investments, and facilitate cross-border acquisitions, ventures or spin-offs.

In November 2008, the SEC proposed a roadmap for phasing in mandatory IFRS filings by U.S. public companies beginning for years ending on or after Dec. 15, 2014. The roadmap is conditional on progress towards milestones that would demonstrate improvements in both the infrastructure of international standard setting and the preparation of the U.S. financial reporting community. The SEC will monitor progress of these milestones between now and 2011, when the SEC plans to consider requiring U.S. public companies to adopt IFRS. The comment period on this proposed roadmap ended on April 20, 2009.

Table of Contents

Adoption of new accounting standards

For a discussion of the adoption of new accounting standards, see Note 2 to the Notes to Consolidated Financial Statements.

Government monetary policies and competition

Government monetary policies

The Federal Reserve Board has the primary responsibility for U.S. monetary policy. Its actions have an important influence on the demand for credit and investments and the level of interest rates, and thus on the earnings of the Company.

Competition

The Company is subject to intense competition in all aspects and areas of our business. Our Asset Management and Wealth Management business segments experience competition from asset management firms; hedge funds; investment banking companies; bank and financial holding companies; banks, including trust banks; brokerage firms; and insurance companies. These firms/companies can be domiciled domestically or internationally. Our Asset Servicing, Clearing Services and Treasury Services business segments compete with domestic and foreign banks offering institutional trust and custody products and cash management products and a wide range of technologically capable service providers, such as data processing and shareholder service firms and other firms that rely on automated data transfer services for institutional and retail customers.

Many of our competitors, with the particular exception of bank and financial holding companies and banks, are not subject to regulation as extensive as the Company, and, as a result, may have a competitive advantage over us and our subsidiaries in certain respects.

As a result of current conditions in the global financial markets and the economy in general, competition could intensify and consolidation of financial service companies could increase.

As part of our business strategy, we seek to distinguish ourselves from competitors by the level of service we deliver to clients. We also believe that technological innovation is an important competitive factor, and, for this reason, have made and continue to make substantial investments in this area. The ability to recover quickly from unexpected events is a competitive factor, and we have devoted significant resources to this. See Item 1A Risk Factors in our 2008 Annual Report on Form 10-K and in our Form 10-Q for the quarter ended March 31, 2009.

Website information

Our website is www.bnymellon.com. We currently make available the following information on our website as soon as reasonably practicable after we electronically file such materials with, or furnish them to, the SEC.

All of our SEC filings, including annual reports on Form 10-K, quarterly reports on Form 10-Q, current reports on Form 8-K and all amendments to these reports, SEC Forms 3, 4 and 5 and any proxy statement mailed in connection with the solicitation of proxies; Financial statements and footnotes prepared using Extensible Business Reporting Language (XBRL);
Our earnings releases and selected management conference calls and presentations; and
Our Corporate Governance Guidelines and the charters of the Audit, Corporate Governance and Nominating, Human Resources and Compensation, Risk and Corporate Social Responsibility Committees of our Board of Directors.

The contents of the website listed above are not incorporated into this Quarterly Report on Form 10-Q.

The SEC reports, the Corporate Governance Guidelines and committee charters are available in print to any shareholder who requests them. Requests should be sent by email to corpsecretary@bnymellon.com or by mail to the Secretary of The Bank of New York Mellon Corporation, One Wall Street, 9th Floor, NY, NY 10286.

- (a) In the second quarter of 2009, global sub-custodian out-of-pocket expense related to client reimbursements was reclassified from sub-custodian expense to asset servicing revenue. This reclassification totaled \$- million in the first quarter of 2009, \$10 million in the second quarter of 2008 and \$14 million in the first six months of 2008.
- (b) In the second quarter of 2009, certain temporary/consulting expenses were reclassified from professional, legal and other purchased services to staff expense. The reclassification totaled \$24 million in the first quarter of 2009, \$19 million in the second quarter of 2008 and \$32 million in the first six months of 2008.
- (c) Includes the FDIC special assessment of \$61 million recorded in the second quarter of 2009.
- (d) Basic and diluted earnings per share under the two-class method were calculated after deducting earnings allocated to participating securities of \$1.7 million in the second quarter of 2009, \$2.6 million in the first quarter of 2009, \$2.2 million in the second quarter of 2008, \$4.3 million in the first six months of 2009 and \$7.9 million in the first six months of 2008.
- (e) Does not foot due to rounding.
- (f) Represents stock options, restricted stock, restricted stock units and warrants outstanding but not included in the computation of diluted average common shares because their effect would be anti-dilutive.

See accompanying Notes to Consolidated Financial Statements

Table of Contents**Notes to Consolidated Financial Statements****Note 1 Basis of presentation**

The accounting and financial reporting policies of The Bank of New York Mellon Corporation, a global financial services company, conform to U.S. generally accepted accounting principles (GAAP) and prevailing industry practices. The preparation of financial statements in conformity with U.S. GAAP requires management to make estimates based upon assumptions about future economic and market conditions that affect reported amounts and related disclosures in our financial statements. Although our current estimates contemplate current conditions and how we expect them to change in the future, it is reasonably possible that in the remainder of 2009, actual conditions could be worse than anticipated in those estimates, which could materially affect our results of operations and financial condition. Amounts subject to significant estimates are items such as the allowance for loan losses and lending-related commitments, goodwill and intangible assets, pension and post-retirement obligations, the fair value of financial instruments and other-than-temporary impairments. Among other effects, such changes could result in future impairments of investment securities, goodwill and intangible assets and establishment of allowances for loan losses and lending related commitments as well as increased pension and post-retirement expense.

The accompanying consolidated financial statements are unaudited. In the opinion of management, all adjustments necessary for a fair presentation of financial position, results of operations and cash flows for the interim periods have been made. Certain other immaterial reclassifications have been made to prior periods to place them on a basis comparable with current period presentation. We have evaluated events occurring subsequent to June 30, 2009 for potential recognition or disclosure in the consolidated financial statements through August 7, 2009.

Note 2 Accounting changes and new accounting pronouncements

SFAS No. 160 (ASC 810-10) Noncontrolling Interests and EITF 08-10 Selected SFAS No. 160 Implementation Questions

In December 2007, the FASB issued SFAS No. 160 (ASC 810-10) (SFAS 160), Noncontrolling Interests in Consolidated Financial Statements, an amendment of ARB No. 51 . SFAS 160 (ASC 810-10) amends

ARB No. 51 (ASC 810-10) to establish accounting and reporting standards for the noncontrolling interest in a subsidiary (i.e., minority interest) and for the deconsolidation of a subsidiary. This statement applies to all entities that prepare consolidated financial statements. This statement clarifies that a noncontrolling interest in a subsidiary is to be part of the equity of the controlling group and is to be reported on the balance sheet within the equity section separately from the Company's equity as a distinct item. The equity section of the balance sheet is required to present equity attributable to both controlling and noncontrolling interests. The carrying amount of the noncontrolling interest is adjusted to reflect the change in ownership interest, and any difference between the amount by which the noncontrolling interests are adjusted and the fair value of the consideration paid or received is recognized directly in equity attributable to the noncontrolling interest (i.e., as additional paid in capital). Any transaction that results in the loss of control of a subsidiary is considered a remeasurement event with any retained interest remeasured at fair value. The gain or loss recognized in income includes both the realized gain or loss related to the portion of the ownership interest sold and the gain or loss on the remeasurement to fair value of the retained interest.

We adopted SFAS 160 (ASC 810-10) on Jan. 1, 2009. As a result, effective Jan. 1, 2009, we reclassified \$39 million of minority interest liabilities from liabilities to equity on our balance sheet. Noncontrolling interests' share of the net loss was \$2 million in the second quarter of 2009 and \$1 million for the six months ended June 30, 2009. Non-controlling interests' share of net income was \$1 million in the first quarter of 2009, \$6 million in the second quarter of 2008 and \$15 million for the six months ended June 30, 2008.

SFAS No. 141 (revised) (ASC 805-10) Business Combinations

In December 2007, the FASB issued SFAS No. 141 (ASC 805-10) (revised 2007) (SFAS 141 (R)), Business Combinations. SFAS 141 (R) (ASC 805-10) requires all acquisitions of businesses to be measured at the fair value of the net assets acquired rather than the cost allocation process specified in SFAS No. 141 (ASC 805-10). The adoption of SFAS 141(R) (ASC 805-10) did not have a

Table of Contents**Notes to Consolidated Financial Statements** (continued)

significant impact on our financial position or results of operations. However, any business combination entered into beginning in 2009 may significantly impact our financial position and results of operations compared with how it would have been recorded under prior GAAP. Earnings volatility could result, depending on the terms of the acquisition. This statement requires deal costs, such as legal, investment banking, and due diligence costs, to be expensed as incurred and requires contingencies to be measured at fair value. The accounting requirements of SFAS 141(R) (ASC 805-10) are applied on a prospective basis for all transactions completed after the effective date.

FASB Staff Position (FSP) EITF 03-6-1 (ASC 260-10) Participating Securities

In June 2008, the FASB issued FSP EITF 03-6-1 (ASC 260-10), *Determining Whether Instruments Granted in Share-Based Payment Transactions Are Participating Securities*. This FSP addresses whether instruments granted in share-based payment transactions are participating securities prior to vesting and, therefore, need to be included in the earnings allocation in computing EPS under the two-class method described in SFAS No. 128 (ASC 260-10). The guidance in this FSP applies to the calculation of EPS under SFAS 128 (ASC 260-10) for share-based payment awards with rights to dividends or dividend equivalents. Unvested share-based payment awards that contain non-forfeitable rights to dividends or dividend equivalents (whether paid or unpaid) are participating securities and shall be included in the computation of EPS pursuant to the two-class method. This FSP was effective Jan. 1, 2009. The adoption of this FSP reduced basic EPS by approximately one cent for the year ended Dec. 31, 2008. All prior period EPS data was adjusted to conform with the provisions of this FSP.

FSP SFAS No. 141 (R)-1(ASC 805-20) Accounting for Assets Acquired and Liabilities Assumed in a Business Combinations that Arise from Contingencies

On April 1, 2009, the FASB issued FSP SFAS No. 141 (R)-1 (ASC 805-20) (SFAS 141(R)-1), *Accounting for Assets Acquired and Liabilities Assumed in a Business Combination That Arise from Contingencies*. SFAS 141(R)-1 (ASC 805-20) amends SFAS 141(R) (ASC 805-10) to require that assets acquired and liabilities assumed in a business combination that arise from contingencies be recognized at fair value, as

determined in accordance with SFAS 157 (ASC 820-10), if the acquisition-date fair value can be reasonably determined. If the acquisition-date fair value of such an asset or liability cannot be reasonably determined, the asset or liability would be measured at the amount that would be recognized for liabilities in accordance with SFAS 5 (ASC 450-10) and FIN 14 (ASC 450-20). The disclosure requirements of SFAS 141 (R)-1 (ASC 805-20) apply to business combination transactions completed subsequent to Dec. 31, 2008.

SFAS No. 161 (ASC 815-10) Disclosures about Derivative Instruments and Hedging Activities

In March 2008, the FASB issued SFAS No. 161 (ASC 815-10), *Disclosures about Derivative Instruments and Hedging Activities* an amendment of FASB Statement No. 133 (SFAS 161). SFAS No. 161 (ASC 815-10) requires entities to disclose the fair value of derivative instruments and their gains or losses in tabular format and information about credit-risk-related contingent features in derivative agreements, counterparty credit risk, and strategies and objectives for using derivative instruments. Entities are required to provide enhanced disclosures about how and why an entity uses derivative instruments, how derivative instruments and related hedged items are accounted for under Statement 133 (ASC 815-10) and how derivative instruments and related hedged items affect an entity's financial position, financial performance and cash flows. Note 18 reflects the disclosure requirements of SFAS 161 (ASC 815-10).

FSP No. SFAS 142-3 (ASC 350-30) Useful Life of Intangible Assets

Effective Jan. 1, 2009, FSP No. SFAS 142-3 (ASC 350-30) (FSP 142-3), *Determination of the Useful Life of Intangible Assets*, amended the factors that should be considered in renewal or extension assumptions used to determine the useful life and initial fair value of recognized intangible assets.

The Company estimates the fair value of intangible assets at acquisition generally on the basis of an income approach using discounted estimated cash flows. For customer relationship and customer contract intangibles, the expected renewals by customers are included in estimating the period over which cash flows will be generated to the Company.

Table of Contents**Notes to Consolidated Financial Statements** (continued)

Estimates of customer renewals are generally based upon the historical information of the acquired intangible assets, and also consider the Company's own historical experience with similar types of customer relationships and contracts. In the absence of historical information or our own experience, we use assumptions market participants would expect to use consistent with the highest and best use of the assets.

Intangibles are amortized over the periods of and in a pattern that is consistent with the identifiable cash flows, or on a straight-line method over the benefit period if the pattern of cash flows is not estimable.

The initial application of this FSP did not impact the Company as it already considers expected customer renewals or extensions in cash flow estimates used to estimate fair values and useful lives. The Company does not capitalize any costs incurred that may contribute to the renewal or extension of any customer relationship and contract intangibles.

FSP SFAS 115-2 and SFAS 124-2 (ASC 320-10) Other-Than-Temporary Impairment

In April 2009, the FASB issued FSP SFAS No. 115-2 and SFAS 124-2 (ASC 320-10), *Recognition and Presentation of Other-Than-Temporary Impairments* (SFAS 115-2). This FSP replaced the *intent and ability* indication in current guidance by specifying that (a) if a company does not have the intent to sell a debt security prior to recovery and (b) it is more likely than not that it will not have to sell the debt security prior to recovery, the security would not be considered other-than-temporarily impaired unless there is a credit loss. When an entity does not intend to sell the security and it is more likely than not that the entity will not have to sell the security before recovery of its cost basis, it will recognize the credit component of an other-than-temporary impairment of a debt security in earnings and the remaining portion in other comprehensive income. For held-to-maturity debt securities, the amount of OTTI recorded in OCI for the non-credit portion of a previous OTTI should be amortized prospectively over the remaining life of the security on the basis of the timing of future estimated cash flows of the security.

SFAS 115-2 (ASC 320-10) requires entities to initially apply the provisions of the standard to previously other-than-temporarily impaired debt securities (i.e. debt securities that

the entity does not intend to sell and that the entity is not more likely than not required to sell before recovery) existing as of the date of initial adoption by making a cumulative-effect adjustment to the opening balance of retained earnings in the period of adoption. The cumulative-effect adjustment reclassifies the noncredit portion of a previously other-than-temporarily impaired debt security held as of the date of initial adoption to accumulated OCI from retained earnings.

This FSP also amends the disclosure provisions of Statement 115 (ASC 320-10) for both debt and equity securities. The FSP requires disclosures in interim and annual periods for major security types identified on the basis of how an entity manages, monitors and measures its securities and the nature and risks of the security. We adopted SFAS 115-2 (ASC 320-10) effective Jan 1, 2009. As a result of adopting this guidance, the Company recorded a cumulative-effect adjustment as of the beginning of the first quarter of 2009 of \$676 million (after-tax) to reclassify the non-credit component of the previously recognized OTTI from retained earnings to accumulated OCI (for those securities where management does not intend to sell the security and it is not more likely than not that the Company will be required to sell the securities before recovery).

FSP SFAS 157-4 (ASC 820-10) Nonactive Markets

In April 2009, the FASB issued FSP SFAS No. 157-4 (ASC 820-10), *Determining Fair Value When the Volume and Level of Activity for the Asset or Liability Have Significantly Decreased and Identifying Transactions That are not Orderly* (SFAS 157). This FSP states that the fair value of an asset, when the market is not active, is the price that would be received to sell the asset in an orderly transaction (that is, not a forced liquidation or distressed sale) between market participants at the measurement date under current market conditions (that is, the inactive market). Entities will need to conclude whether a transaction was orderly based on the weight of evidence. When estimating fair value, entities should place more weight on transactions that the company concludes are orderly and less weight on transactions for which the entity does not have sufficient information to conclude whether the transaction is orderly. This FSP also amends the disclosure provisions of SFAS 157 (ASC 820-10) to require entities to disclose on interim and annual periods the inputs and valuation techniques used to

Table of Contents

Notes to Consolidated Financial Statements (continued)

measure fair value. We adopted this FSP as of Jan. 1, 2009. As a result of adopting this guidance, the fair value of the Company's debt securities portfolio, recorded in accumulated other comprehensive income at June 30, 2009, was measured at \$98 (after-tax) higher than if it had not adopted this guidance and relied solely on pricing sources.

FSP SFAS No. 107-1 and APB No. 28-1 (ASC 825-10) Interim Disclosures About Fair Value of Financial Instruments

In April 2009, the FASB issued FSP SFAS No. 107-1 and APB No. 28-1 (ASC 825-10), *Interim Disclosures about Fair Value of Financial Instruments* (SFAS 107). This FSP amends SFAS 107 (ASC 825-10) and APB Opinion No. 28 (ASC 270-10) to require disclosures about fair value of financial instruments in interim financial statements as well as in annual financial statements. These disclosures were effective June 30, 2009. Note 15 reflects these disclosures requirements.

SFAS No. 165 (ASC 855-10) Subsequent Events

In May 2009, the FASB issued SFAS No. 165 (ASC 855-10), *Subsequent Events* (SFAS 165). This statement establishes general standards of accounting for and disclosure of events that occur after the balance sheet date but before financial statements are issued or are available to be issued. SFAS No. 165 (ASC 855-10) renames type one and type two subsequent events as recognized subsequent events and non-recognized subsequent events. For recognized subsequent events, an entity shall recognize in the financial statements the effects of all subsequent events that provide additional evidence about conditions that existed at the date of the balance sheet, including the estimates inherent in the process of preparing financial statements. For unrecognized subsequent events, an entity shall not recognize subsequent events about conditions that did not exist at the date of the balance sheet but that arose after the balance sheet date. Adoption of SFAS 165 (ASC 855-10) had no impact on our results of operations at June 30, 2009.

Note 3 Acquisitions and dispositions

There were no material acquisitions or dispositions in the second quarter of 2009.

In July 2009, we reached an agreement to sell MUNB, our national bank subsidiary located in Florida, to Banco Sabadell of Spain. The transaction is subject to regulatory approvals and is expected to close by the first quarter of 2010.

We frequently structure our acquisitions with both an initial payment and later contingent payments tied to post-closing revenue or income growth. We record the fair value of contingent payments as an additional cost of the entity acquired in the period that the payment becomes probable. Contingent payments totaled \$16 million in the second quarter of 2009 and \$25 million in the first six months of 2009.

At June 30, 2009, we were potentially obligated to pay additional consideration which, using reasonable assumptions for the performance of the acquired companies and joint ventures based on contractual agreements, could range from approximately \$110 million to \$150 million over the next four years. None of the potential contingent additional consideration was recorded as goodwill at June 30, 2009.

Acquisitions in 2008

In January 2008, we acquired ARX Capital Management (ARX). ARX is a leading independent asset management business, headquartered in Rio de Janeiro, Brazil, specializing in Brazilian multi-strategy, long/short and long only investment strategies. The impact of this acquisition was not material to earnings per share.

On Dec. 31, 2008, we acquired the Australian (Ankura Capital) and U.K. (Blackfriars Asset Management) businesses from our Asset Management joint venture with WestLB. The impact of this acquisition is not expected to be material to earnings per share.

Dispositions in 2008

In February 2008, we sold our B-Trade and G-Trade execution businesses to BNY ConvergEx Group. These businesses were sold at book value.

Table of Contents**Notes to Consolidated Financial Statements** (continued)

On March 31, 2008, we sold a portion of the Estabrook Capital Management business which reduced our AUM by \$2.4 billion. We retained approximately 30% of the AUM which are primarily managed by the Wealth Management segment.

In June 2008, we sold Mellon 1st Business Bank, based in Los Angeles, California. The sale reduced loan and deposit levels by \$1.1 billion and \$2.8 billion, respectively. There was no gain or loss recorded on this transaction.

On Oct. 1, 2008, we sold the assets of Gannett Welsh & Kotler, an investment management subsidiary with approximately \$8 billion in AUM.

Note 4 Discontinued operations

In July 2009, the Company reached an agreement to sell Mellon United National Bank, our national bank subsidiary located in Florida. As a result, we applied discontinued operations accounting to this business and the income statements for all periods in this Form 10-Q have been restated. This business, which was previously reported in the Other segment, no longer fits our strategic focus on our asset management and securities servicing businesses. The results for discontinued operations

in the second quarter of 2009 include a pre-tax loss on sale of \$85 million, primarily attributable to the elimination of \$82 million of goodwill.

Summarized financial information for discontinued operations is as follows:

Discontinued operations assets and liabilities (a)

<i>(in millions)</i>	June 30, 2009
Cash and due from banks	\$ 47
Federal funds sold and securities repurchased under resale agreements	11

80 The Bank of New York Mellon Corporation

Table of Contents**Notes to Consolidated Financial Statements** (continued)*Other-than-temporary impairment*

Upon acquisition of a security, the Company decides whether it is within the scope of EITF 99-20 (ASC 325-40) or will be evaluated for impairment under SFAS 115 (ASC 320-10). Subsequently, if the security is downgraded we do not alter this decision.

EITF 99-20 (ASC 325-40) is an interpretation of SFAS 115 (ASC 320-10) for certain debt securities which are beneficial interests in securitized financial assets. Specifically, EITF 99-20 (ASC 325-40) provides incremental impairment guidance for a subset of the debt securities within the scope of SFAS 115 (ASC 320-10). For securities where there is no debt rating at acquisition, and the security is a beneficial interest in securitized financial assets, the Company uses the EITF 99-20 (ASC 325-40) impairment model. For securities where there is no debt rating at acquisition and the security is not a beneficial interest in securitized financial assets the Company uses the SFAS 115 (ASC 320-10) impairment model.

We routinely conduct periodic reviews to identify and evaluate each investment security to determine whether OTTI has occurred. Economic models are used to determine whether an OTTI has occurred on these securities. While all securities are considered, the securities primarily impacted by OTTI testing are non-agency RMBS and HELOCs. For each non-agency RMBS in the investment portfolio (including but not limited to those whose fair value is less than their amortized cost basis), an extensive, regular review is conducted to determine if an OTTI has occurred. Various inputs to the economic models are used to determine if an unrealized loss on non-agency RMBS is other-than-temporary. The most significant inputs are:

Default rate the number of securities expected to go into default each quarter which is driven by the roll rate of loans in each performance bucket that will migrate to default; and

Severity the loss expected to be realized when a loan defaults

To determine if the unrealized loss for non-agency RMBS is other-than-temporary, we project total estimated defaults of the underlying assets (mortgages) and multiply that calculated amount by an estimate of realizable value upon sale in the marketplace (severity) in order to determine the projected collateral loss. We also evaluate the current credit

enhancement underlying the bond to determine the impact on cash flows. If we determine that a given RMBS position will be subject to a write-down or loss, we record the expected credit loss as a charge to earnings.

In the first half of 2009, the housing market indicators and the broader economy continued to deteriorate. To reflect the declining value of homes in the current environment, we adjusted our non-agency RMBS loss severity assumptions to decrease the amount we expect to receive to cover the value of the original loan.

In addition, we have estimated the expected loss by taking into account observed performance of the underlying securities, industry studies, market forecasts, as well as our view of the economic outlook affecting bond collateral.

The table below shows the projected weighted-average default rates and loss severities for recent-vintage (i.e., 2007, 2006 and late 2005) non-agency RMBS portfolios at June 30, 2009 and Dec. 31, 2008.

Projected weighted-average default rates and severities

	June 30, 2009		Dec. 31, 2008	
	Default Rate	Severity	Default Rate	Severity
Alt-A	32%	48%	28%	43%
Subprime	56%	64%	56%	59%
Prime	13%	37%	14%	31%

Edgar Filing: Bank of New York Mellon CORP - Form 10-Q

The HELOC portfolio holdings are regularly evaluated for potential OTTI. The HELOC securities credit enhancement is provided by a combination of excess spread, over-collateralization, subordination, and a note insurance policy provided by a monoline insurer. For the HELOC holdings, the rating is highly dependent upon the rating of the monoline insurance provider.

If a monoline insurer experiences a credit rating downgrade and it is determined that the monoline insurer may not be able to meet its obligations, the HELOC holdings guaranteed by that insurer are further evaluated based on the deal collateral and structure without the insurer guarantee. Potential losses are compared to the available total coverage provided by excess spread, over-collateralization and subordination for each bond to determine OTTI.

The Bank of New York Mellon Corporation 81

Table of Contents**Notes to Consolidated Financial Statements** (continued)

The following table provides the detail of securities portfolio losses. Securities write-downs in 2008 reflect mark-to-market (both credit and non-credit) impairment write-downs.

Other	36	143 ^(a)	50	179 ^(a)	95
Total net securities losses	\$ 256	\$ 295	\$ 152	\$ 551	\$ 225

^(a) Includes \$95 million resulting from the adverse impact of low interest rates on a structured tax investment and \$37 million of seed capital write-downs.

The following tables reflect investment securities credit losses recorded in earnings. The beginning balance represents the credit loss component for which OTTI occurred on debt securities in prior periods. The additions represent the first time a debt security was credit impaired or when subsequent credit impairments have occurred.

Debt securities credit loss roll forward	QTD
Beginning balance as of March 31, 2009	\$ 735
Add: Initial OTTI credit losses	185
Subsequent OTTI credit losses	105
Less: Realized losses for securities sold	-
Securities intended or required to be sold	-
Increases in expected cash flows on debt securities	-
Ending balance as of June 30, 2009	\$ 1,025

Debt securities credit loss roll forward	YTD
Beginning balance as of Dec. 31, 2008	\$ 535
Add: Initial OTTI credit losses	343
Subsequent OTTI credit losses	147
Less: Realized losses for securities sold	-
Securities intended or required to be sold	-
Increases in expected cash flows on debt securities	-
Ending balance as of June 30, 2009	\$ 1,025

Note 6 Goodwill and intangible assets*Goodwill*

The level of goodwill increased in the second quarter of 2009 due to foreign exchange translation on non-U.S. dollar denominated goodwill partially offset by the transfer of goodwill to discontinued operations. Goodwill impairment testing is performed annually at the business segment level. The table below provides a breakdown of goodwill by business segment.

Edgar Filing: Bank of New York Mellon CORP - Form 10-Q

Goodwill by segment

<i>(in millions)</i>	Asset Management	Wealth Management	Asset Servicing	Issuer Services	Clearing Services	Treasury Services	Other	Total
Balance at Dec. 31, 2008	\$ 7,218	\$ 1,694	\$ 3,360	\$ 2,463	\$ 902	\$ 123	\$ 138	\$ 15,898

^(a) Includes \$50 million goodwill impairment recorded in the first quarter of 2009.

^(b) Other changes in goodwill include purchase price adjustments and certain other reclassifications.

Table of Contents**Notes to Consolidated Financial Statements** (continued)*Intangible assets*

Intangible assets not subject to amortization are tested annually for impairment or more often if events or circumstances indicate they may be impaired. The decrease in intangible assets at June 30, 2009 compared with Dec. 31, 2008 resulted from intangible amortization partially offset by foreign exchange translation on non-U.S. dollar

denominated intangible assets. Intangible amortization expense was \$108 million in the second quarter of 2009, \$107 million in the first quarter of 2009, \$123 million in the second quarter of 2008, \$215 million in the first six months of 2009 and \$242 million in the first six months of 2008.

The table below provides a breakdown of intangible assets by business segment.

Intangible assets net carrying amount by segment

2012	323
2013	279

Note 7 Allowance for credit losses

The allowance for credit losses is maintained at a level that, in management's judgment, is adequate to absorb probable losses associated with specifically identified loans, as well as estimated probable credit losses inherent in the remainder of the credit portfolio at the balance sheet date.

We conduct a quarterly portfolio review to determine the adequacy of our allowance for credit losses. Following this review, senior management analyzes the results and determines the allowance for credit

Table of Contents**Notes to Consolidated Financial Statements** (continued)

losses. The Risk Committee of our Board of Directors reviews the allowance as of the end of each quarter.

86 The Bank of New York Mellon Corporation

Table of Contents**Notes to Consolidated Financial Statements** (continued)**Note 12 Restructuring charge**

In the fourth quarter of 2008, we announced that, due to weakness in the global economy, we would reduce our workforce by approximately 4%, or an estimated 1,800 positions, and as a result, recorded a pre-tax restructuring charge of \$181 million. In the second quarter and first six months of 2009, we recorded additional charges of \$6 million

and \$16 million, respectively associated with this workforce reduction.

As of June 30, 2009, we have eliminated approximately 1,300 positions. Severance payments related to these positions are primarily paid over the salary continuance period in accordance with the separation plan. We expect to substantially complete this reduction by the end of 2009.

The following table presents the activity in the restructuring reserve through June 30, 2009.

Restructuring charge reserve - activity

<i>(in millions)</i>	Severance	Stock-based incentive acceleration	Other compensation costs	Other non-personnel expenses	Total
Original restructuring charge at Dec. 31, 2008	\$ 166	\$ 9	\$ 5	\$ 1	\$ 181
Additional charges	8	-	-	2	10
Utilization	(30)	-	-	-	(30)
Balance at March 31, 2009	\$ 144	\$ 9	\$ 5	\$ 3	\$ 161
Additional charges	-	(2)	-	8	6
Utilization	(27)	-	-	(4)	(31)
Balance at June 30, 2009	\$ 117	\$ 7	\$ 5	\$ 7	\$ 136

The restructuring charges for the fourth quarter of 2008 and first and second quarters of 2009 are presented below by business segment. The charges were recorded in the Other segment as this restructuring was a corporate initiative and not directly related to the operating performance of these segments.

Restructuring charge by segment	2Q09	1Q09	4Q08	Total restructuring charges
--------------------------------------------	-------------	-------------	-------------	--------------------------------------------

Total restructuring charges	\$ 6	\$ 10	\$ 181	\$ 197

Note 13 Income taxes

The statutory federal income tax rate is reconciled to our effective income tax rate below:

Effective tax rate	Six months ended	
	June 30, 2009	June 30, 2008
Federal rate	35.0%	35.0%
State and local income taxes, net of federal income tax benefit	4.4	2.2
Credit for low-income housing investments	(2.6)	(1.2)
Tax-exempt income	(3.0)	(2.0)
Foreign operations	(7.5)	(5.2)
Tax settlements	(11.0)	8.3
Other - net	0.7	2.0
Effective rate	16.0%	39.1%

Our total tax reserves as of June 30, 2009 were \$223 million compared with \$204 million at March 31, 2009. If these tax reserves were unnecessary, \$223 million would affect the effective tax rate in future periods. We recognize accrued interest and penalties, if applicable, related to income taxes in income tax expense. Included in the balance sheet as of June 30, 2009 is accrued interest, where applicable, of \$84 million. The additional tax expense related to interest for the three and six months ended June 30, 2009 was \$23 million and \$38 million, respectively.

Table of Contents

Notes to Consolidated Financial Statements (continued)

Our federal consolidated income tax returns are closed to examination through 2002. Our New York State and New York City return examinations have been completed through 1996. Our United Kingdom income tax returns are closed through 2002.

Note 14 Securitizations and variable interest entities

Securitizations

In 2000, we purchased Dreyfus Institutional Reserves Money Fund shares and sold the right to receive the principal value of the shares in 2021 in a securitization transaction and retained the rights to receive the ongoing dividends from the shares.

In 2003, the Company securitized quarterly variable rate municipal bonds, which are Aa3/AAA insured bonds issued by borrowers rated no lower than A2/A+ by Moody's Investor Services and Standard & Poors. No gain or loss was recognized on this transaction.

Our retained interests in these securitizations at June 30, 2009 and Dec. 31, 2008, are approximately \$150 million and \$234 million, respectively, which represents our maximum exposure to the securitizations. The Company did not securitize any assets during the first half of 2009.

At June 30, 2009, the Company had no asset-backed commercial paper conduits.

Variable Interest Entities

FIN 46(R) (ASC 810-10), Consolidation of Variable Interest Entities (FIN 46(R)) (ASC 810-10) applies to certain entities in which equity investors do not have the characteristics of a controlling financial interest or do not have sufficient equity at risk for the entity to finance its activities without additional subordinated financial support from other parties. The primary beneficiary of a Variable Interest Entity (VIE) is the party that absorbs a majority of the entity's expected losses, receives a majority of its expected residual returns or both, as a result of holding variable interests. The Company is required to consolidate entities for which it is the primary beneficiary.

The Company's VIEs generally include retail, institutional and alternative investment funds offered to its retail and institutional customers. The Company may provide start-up capital in its

new funds and also earns fund management fees. Performance fees are also earned on certain funds. The Company is not contractually required to provide financial or any other support to its VIEs. In addition, we provide trust and custody services for a fee to entities sponsored by other corporations in which we have no other variable interest.

Primary beneficiary calculations are prepared in accordance with FIN 46(R) (ASC 810-10). This evaluation includes estimates of ranges and probabilities of losses and returns from the funds. The calculated expected gains and expected losses are allocated to the variable interests holders of the funds, which are generally the fund's investors and may include the Company, in order to determine which entity is required to consolidate the VIE, if any.

The start up capital invested in our Asset Management VIEs as of June 30, 2009 has been included in our financial statements as shown below:

Other VIEs at June 30, 2009	Assets	Liabilities	Maximum loss exposure
------------------------------------	--------	-------------	--------------------------

Edgar Filing: Bank of New York Mellon CORP - Form 10-Q

(in millions)

Trading	\$ 27	\$ -	\$ 27
Available-for-sale	96	-	96
Other	245	-	245
Total	\$ 368	\$ -	\$ 368

Other VIEs at Dec. 31, 2008

(in millions)	Assets	Liabilities	Maximum loss exposure
Trading	\$ 26	\$ -	\$ 26
Available-for-sale	102	-	102
Other	272	-	272
Total	\$ 400	\$ -	\$ 400

The Company has voluntarily provided limited credit support to certain money market, collective, commingled and separate account funds (the Funds). Entering into such support agreements represents an event under FIN 46(R) (ASC 810-10), and its interpretations.

In analyzing the Funds for which credit support was provided, it was determined that interest rate risk and credit risk are the two main risks that the funds are designed to create and pass through to their investors. Accordingly, interest rate and credit risk were analyzed to determine if the Company was the primary beneficiary of each of the Funds.

Table of Contents**Notes to Consolidated Financial Statements** (continued)

Credit risk variability quantification includes any potential future credit risk in a Fund and is evaluated using credit ratings and default rates. The full marks on any sensitive securities on watch are also included.

Interest rate variability quantification includes the expected Fund yield. Standard deviations are used along with the Fund's market value to quantify the interest rate risk expected in the Fund.

The Company's analysis of the credit risk variability and interest rate risk variability associated with the supported Funds resulted in the Company not being the primary beneficiary and therefore the Funds were not consolidated.

The table below shows the financial statement items related to non-consolidated VIEs to which we have provided credit support agreements:

Credit supported VIEs at June 30, 2009

<i>(in millions)</i>	Assets	Liabilities	Maximum loss exposure
Other	\$ -	\$ 182	\$ 161

Credit supported VIEs at Dec. 31, 2008

<i>(in millions)</i>	Assets	Liabilities	Maximum loss exposure
Other	\$ -	\$ 248	\$ 142

Certain funds have been created solely with securities that are subject to credit support agreements where we have agreed to absorb the majority of loss. Accordingly, these funds have been consolidated into the Company and have affected the following financial statement items:

Consolidated VIEs at June 30, 2009

<i>(in millions)</i>	Assets	Liabilities	Maximum loss exposure
Available-for-sale	\$ 38	\$ -	\$ 38
Other	-	139	23
Total	\$ 38	\$ 139	\$ 61

Edgar Filing: Bank of New York Mellon CORP - Form 10-Q

Consolidated VIEs at Dec. 31, 2008

<i>(in millions)</i>	Assets	Liabilities	Maximum loss exposure
Available-for-sale	\$ 26	\$ -	\$ 26
Other	24	353	47
Total	\$ 50	\$ 353	\$ 73

The maximum loss exposure shown above for the credit support agreements provided to the Company's VIEs primarily reflects a complete loss on the Lehman Brothers Holdings Inc. securities for the Company's clients that accepted our offer of support. As of June 30, 2009, the Company recorded \$283 million in liabilities related to its VIEs for which credit support agreements were provided.

Note 15 Fair value of financial instruments

The carrying amounts of our financial instruments (i.e., monetary assets and liabilities) are determined under different accounting methods see Note 1 to the Consolidated Financial Statements contained in the Company's 2008 Annual Report on Form 10-K. The following disclosure discusses these instruments on a uniform fair value basis. However, active markets do not exist for a significant portion of these instruments, principally loans and commitments. As a result, fair value determinations require significant subjective judgments regarding future cash flows. Other judgments would result in different fair values. Among the assumptions we used are discount rates ranging principally from 0.18% to 5.68% at June 30, 2009 and 0.08% to 3.25% at Dec. 31, 2008. The fair value information supplements the basic financial statements and other traditional financial data presented throughout this report.

Note 16, Fair value measurement presents assets and liabilities measured at fair value by the three level valuation hierarchy established by SFAS 157 (ASC 820-10), as well as a roll forward schedule of fair value measurements using significant unobservable inputs. Note 17, Fair value option presents the instruments for which fair value accounting was elected and the corresponding income statement impact of these instruments.

Table of Contents**Notes to Consolidated Financial Statements** (continued)

A summary of the practices used for determining fair value is as follows.

Interest-bearing deposits in banks

The fair value of interest-bearing deposits in banks is based on discounted cash flows.

Securities, trading activities, and derivatives used for ALM

The fair value of securities and trading assets and liabilities is based on quoted market prices, dealer quotes, or pricing models. Fair value amounts for derivative instruments, such as options, futures and forward rate contracts, commitments to purchase and sell foreign exchange, and foreign currency swaps, are similarly determined. The fair value of over-the-counter interest rate swaps is the discounted value of projected future cash flows, adjusted for other factors including, but not limited to and if applicable, optionality and implied volatilities, as well as counterparty credit.

Loans and commitments

For residential mortgage loans, fair value is estimated using discounted cash flow analyses, adjusting where appropriate for prepayment estimates, using interest rates currently being offered for loans with similar terms and maturities to borrowers. Discounted future cash flows are used to determine the fair value of other types of loans. The fair value of commitments to extend credit, standby letters of credit, and commercial letters of credit is based upon the cost to settle the commitment.

Other financial assets

Fair value is assumed to equal carrying value for these assets due to their short maturity.

Deposits, borrowings and long-term debt

The fair value of noninterest-bearing deposits and payables to customers and broker-dealers is assumed to be their carrying amount. The fair value of interest-bearing deposits, borrowings, and long-term debt is based upon current rates for instruments of the same remaining maturity or quoted market prices for the same or similar issues.

Summary of financial instruments

<i>(in millions)</i>	June 30, 2009		Dec. 31, 2008	
	Carrying amount	Estimated fair value	Carrying amount	Estimated fair value

Deposits	600	590	8	-
Long-term debt	11,106	10,456	701	-

Table of Contents**Notes to Consolidated Financial Statements** (continued)**Note 16 Fair value measurement**

We adopted SFAS 157 (ASC 820-10), (Fair Value Measurement), effective Jan. 1, 2008. SFAS 157 (ASC 820-10) defines fair value as the price that would be received to sell an asset, or paid to transfer a liability, in an orderly transaction between market participants at the measurement date and establishes a framework for measuring fair value. It establishes a three-level hierarchy for fair value measurements based upon the transparency of inputs to the valuation of an asset or liability as of the measurement date and expands the disclosures about instruments measured at fair value. SFAS 157 (ASC 820-10) requires consideration of a company's own creditworthiness when valuing liabilities.

Effective Jan. 1, 2009, we adopted SFAS 157-4 (ASC 820-10), Determining Fair Value When the Volume and Level of Activity for the Asset or Liability Have Significantly Decreased and Identifying Transactions That Are Not Orderly . SFAS 157-4 (ASC 820-10) provides guidance on how to determine the fair value when the volume and level of activity for the asset or liability have significantly decreased and reemphasizes that the objective of a fair value measurement remains an exit price notion. In those circumstances, further analysis of transactions or quoted prices is needed, and a significant adjustment to the transactions or quoted prices may be necessary to estimate fair value in accordance with SFAS 157 (ASC 820-10). It also requires additional disclosures for instruments within the scope of SFAS 157 (ASC 820-10) to include inputs and valuation techniques used, change in valuation techniques and related inputs, if any, and more disaggregated information relating to debt and equity securities.

The amended standard provides a consistent definition of fair value, which focuses on exit price in an orderly transaction (that is, not a forced liquidation or distressed sale) between market participants at the measurement date under current market conditions. If there has been a significant decrease in the volume and level of activity for the asset or liability, a change in valuation technique or the use of multiple valuation techniques may be appropriate. In such instances, determining the price at which willing market participants would transact at the measurement date under current market conditions depends on the facts and circumstances and requires the use of

significant judgment. The objective is to determine from weighted indicators of fair value a reasonable point within the range that is most representative of fair value under current market conditions.

We also adopted SFAS 159 (ASC 825-10) (The Fair Value Option for Financial Assets and Financial Liabilities), effective Jan. 1, 2008. SFAS 159 (ASC 825-10) provides an option to elect fair value as an alternative measurement basis for selected financial assets, financial liabilities, unrecognized firm commitments and written loan commitments which are not subject to fair value under other accounting standards.

Determination of fair value

Following is a description of our valuation methodologies for assets and liabilities measured at fair value. We have established processes for determining fair values. Fair value is based upon quoted market prices, where available. For financial instruments where quotes from recent exchange transactions are not available, we determine fair value based on discounted cash flow analysis, comparison to similar instruments, and the use of financial models. Discounted cash flow analysis is dependent upon estimated future cash flows and the level of interest rates. Model-based pricing uses inputs of observable prices for interest rates, foreign exchange rates, option volatilities and other factors. Models are benchmarked and validated by an independent internal risk management function. Our valuation process takes into consideration factors such as counterparty credit quality, liquidity, concentration concerns, observability of model parameters and the results of stress tests. Valuation adjustments may be made to ensure that financial instruments are recorded at fair value.

Most derivative contracts are valued using internally developed models which are calibrated to observable market data and employ standard market pricing theory for their valuations. An initial risk-neutral valuation is performed on each position assuming time-discounting based on an AA credit curve. Then, to arrive at a fair value that incorporates counterparty credit risk, a credit adjustment is made to these results by discounting each trade's expected exposures to the counterparty using the counterparty's credit spreads, as implied by the credit default swap market. We also adjust expected liabilities to the counterparty using the Company's

Table of Contents**Notes to Consolidated Financial Statements** (continued)

own credit spreads, also implied by the credit default swap market. Accordingly, the valuation of our derivative position is sensitive to the current changes in our own credit spreads as well as those of our counterparties.

In certain cases, we may face additional costs to exit large risk positions or recent prices may not be observable for instruments that trade in inactive or less active markets. The costs to exit large risk positions are based on evaluating the negative change in the market during the time it would take for us to bring those positions to normal market levels for those instruments. Upon evaluating the uncertainty in valuing financial instruments subject to liquidity issues, we make an adjustment to their value. The determination of the liquidity adjustment includes the availability of external quotes, the time since the latest available quote and the price volatility of the instrument.

Certain parameters in some financial models are not directly observable and, therefore, are based on managements' estimates and judgments. These financial instruments are normally traded less actively. Examples include certain credit products where parameters such as correlation and recovery rates are unobservable. We apply valuation adjustments to mitigate the possibility of error and revision in the model based estimate value.

The methods described above may produce a current fair value calculation that may not be indicative of net realizable value or reflective of future fair values. We believe our methods of determining fair value are appropriate and consistent with other market participants. However, the use of different methodologies or different assumptions to value certain financial instruments could result in a different estimate of fair value.

Valuation hierarchy

SFAS 157 (ASC 820-10) establishes a three-level valuation hierarchy for disclosure of fair value measurements based upon the transparency of inputs to the valuation of an asset or liability as of the measurement date. The three levels are described below.

Level 1: Inputs to the valuation methodology are quoted prices (unadjusted) for identical assets or liabilities in active markets. Level 1 assets and liabilities include debt and equity securities and derivative financial instruments actively traded on exchanges and U.S. Treasury securities and U.S. Government securities that are actively traded in highly liquid over the counter markets.

Level 2: Observable inputs other than Level 1 prices, for example, quoted prices for similar assets and liabilities in active markets, quoted prices for identical or similar assets or liabilities in markets that are not active, and inputs that are observable or can be corroborated, either directly or indirectly, for substantially the full term of the financial instrument. Level 2 assets and liabilities include debt instruments that are traded less frequently than exchange traded securities and derivative instruments whose model inputs are observable in the market or can be corroborated by market observable data. Examples in this category are certain variable and fixed rate agency and non-agency securities, corporate debt securities and derivative contracts.

Level 3: Inputs to the valuation methodology are unobservable and significant to the fair value measurement. Examples in this category include interests in certain securitized financial assets, non-agency RMBS, certain private equity investments, and derivative contracts that are highly structured or long-dated.

A financial instrument's categorization within the valuation hierarchy is based upon the lowest level of input that is significant to the fair value measurement.

Following is a description of the valuation methodologies used for instruments measured at fair value, as well as the general classification of such instruments pursuant to the valuation hierarchy.

Loans and unfunded lending-related commitments

Where quoted market prices are not available, we generally base the fair value of loans and unfunded lending-related commitments on observable market prices of similar instruments, including bonds, credit derivatives and loans with similar characteristics. If observable market prices are not available, we base the fair value on estimated cash flows adjusted for credit risk which are discounted using an interest rate appropriate for the maturity of the applicable loans or the unfunded commitments.

Table of Contents

Notes to Consolidated Financial Statements (continued)

Loans carried at fair value are included in trading assets on the balance sheet. Unrealized gains and losses on unfunded lending commitments carried at fair value are classified in Other assets and Other liabilities, respectively. Loans and unfunded lending commitments carried at fair value are generally classified within Level 2 of the valuation hierarchy.

Securities

Where quoted prices are available in an active market, we classify the securities within Level 1 of the valuation hierarchy. Securities are defined as both long and short positions. Level 1 securities include highly liquid government bonds, certain mortgage products and exchange-traded equities.

If quoted market prices are not available, we estimate fair values using pricing models, quoted prices of securities with similar characteristics, or discounted cash flows. Examples of such instruments, which would generally be classified within Level 2 of the valuation hierarchy, include certain agency and non-agency mortgage-backed securities, commercial mortgage-backed securities and European floating rate notes.

For securities where quotes from recent transactions are not available for identical securities, we determine fair value primarily based on pricing sources with reasonable levels of price transparency that employ financial models or obtain comparison to similar instruments to arrive at consensus prices.

Specifically, the pricing sources obtain recent transactions for similar types of securities (e.g., vintage, position in the securitization structure) and ascertain variables such as discount rate and speed of prepayment for the types of transaction and apply such variables to similar types of bonds. We view these as observable transactions in the current market place and classify such securities as Level 2. They discontinue pricing any specific security whenever they determine there is insufficient observable data to provide a good faith opinion on price.

Securities included in this category that are affected by the lack of market liquidity include our Alt-A RMBS, prime RMBS, subprime RMBS and commercial mortgage-backed securities.

In addition, we have significant investments in more actively traded agency RMBS and the pricing sources derive the prices for these securities largely from quotes they obtain from three major inter-dealer brokers. The pricing sources receive their daily observed trade price and other information feeds from the interdealer brokers.

For securities with bond insurance, the financial strength of the insurance provider is analyzed and that information is included in the fair value assessment for such securities.

In certain cases where there is limited activity or less transparency around inputs to the valuation, we classify those securities in Level 3 of the valuation hierarchy. Securities classified within Level 3 include certain asset-backed securities CDOs, non-agency RMBS and other retained interests in securitizations.

In the first quarter of 2009, we changed our valuation technique in determining the fair value of certain securities when there has been a significant decline in volume and market activity.

Recent transactions in non-agency RMBS and commercial mortgage-backed securities may not reflect an orderly transaction in the marketplace. In adopting the guidance of SFAS 157-4 (ASC 820-10), for these securities, we adjust the discount rate to reflect an orderly transaction in the current marketplace. We used a discount rate that was determined based on our assessment of the credit quality of the non-agency RMBS and commercial mortgage-backed securities. The discount rate was derived based on input from market participants as to the appropriate discount rate for hypothetical bond issuances that exhibit certain credit features similar to the bonds we hold.

To further reflect current market conditions, we weighted our internally modeled price with prices derived from pricing sources to calculate the fair market value in an orderly transaction. Depending on credit quality, the price weighting of the security ranged from 5% pricing source and

Edgar Filing: Bank of New York Mellon CORP - Form 10-Q

95% model to 85% pricing source and 15% model.

The Bank of New York Mellon Corporation 93

Table of Contents

Notes to Consolidated Financial Statements (continued)

Other short-term U.S. government-backed commercial paper and borrowings from Federal Reserve related to asset-backed commercial paper

These instruments are classified in Level 2 of the valuation hierarchy. The fair value of these instruments is estimated using pricing models.

Derivatives

We classify exchange-traded derivatives valued using quoted prices in Level 1 of the valuation hierarchy. Examples include exchanged-traded equity and foreign exchange options. Since few other classes of derivative contracts are listed on an exchange, most of our derivative positions are valued using internally developed models that use as their basis readily observable market parameters and we classify them in Level 2 of the valuation hierarchy. Such derivatives include basic interest rate swaps and options and credit default swaps. Derivatives valued using models with significant unobservable market parameters and that are traded less actively or in markets that lack two way flow, are classified in Level 3 of the valuation hierarchy. Examples include long-dated interest rate or currency swaps, where swap rates may be unobservable for longer maturities; and certain credit products, where correlation and recovery rates are unobservable. Additional disclosures of derivative instruments are provided in Note 18 of Notes to Consolidated Financial Statements.

Seed capital

In our Asset Management segment we manage investment assets, including equities, fixed income, money market and alternative investment funds for institutions and other investors; as part of that activity we make seed capital investments in certain funds. Seed capital is included in trading assets, securities available-for-sale and other assets, depending on the nature of the investment. When applicable, we value seed capital based on the published net asset value (NAV) of the fund. We include funds in which ownership interests in the fund are publicly-traded in an active market and institutional funds in which investors trade in and out daily in Level 1 of the valuation hierarchy. We include open-end funds where investors are allowed to sell their ownership interest back to the fund less frequently than daily and where our interest in the fund contains no other rights or obligations

in Level 2 of the valuation hierarchy. However, we generally include investments in funds which allow investors to sell their ownership interest back to the fund less frequently than monthly in Level 3, unless actual redemption prices are observable.

For other types of investments in funds, we consider all of the rights and obligations inherent in our ownership interest, including the reported NAV as well as other factors that affect the fair value of our interest in the fund. To the extent the NAV measurements reported for the investments are based on unobservable inputs or include other rights and obligations (e.g., obligation to meet cash calls), we generally classify them in Level 3 of the valuation hierarchy.

Certain interests in securitizations

For certain interests in securitizations which are classified in securities available-for-sale and other assets, we use discounted cash flow models which generally include assumptions of projected finance charges related to the securitized assets, estimated net credit losses, prepayment assumptions and estimates of payments to third-party investors. When available, we compare our fair value estimates and assumptions to market activity and to the actual results of the securitized portfolio. Changes in these assumptions may significantly impact our estimate of fair value of the interests in securitizations; accordingly, we generally classify them in Level 3 of the valuation hierarchy.

Private equity investments

Our Other segment includes holdings of nonpublic private equity investment through funds managed by third party investment managers and, to a lesser extent, direct investment in private equities. Nonpublic private equity investments generally lack quoted market prices, are less liquid and may be long term; accordingly, we must apply significant judgment in determining their fair value. We value private equity investments initially based upon the transaction price which we subsequently adjust to reflect expected exit values as evidenced by financing and sale transactions with third parties or through ongoing reviews by the investment managers.

The investment managers consider a number of factors in changes in valuation including current

Table of Contents**Notes to Consolidated Financial Statements** (continued)

operating performance and future expectations of the particular investment, industry valuations of comparable public companies, changes in market outlook and the financing environment. Nonpublic private equity investments are included in Level 3 of the valuation hierarchy.

Private equity investments also include publicly held equity investments, generally obtained through the initial public offering of privately held equity investments. Publicly held investments are marked-to-market at the quoted public value less adjustments for regulatory or contractual sales restrictions.

Discounts for restrictions are quantified by analyzing the length of the restriction period and the volatility of the equity security. Publicly held investments are primarily classified in Level 2 of the valuation hierarchy.

The following tables present the financial instruments carried at fair value at June 30, 2009 and Dec. 31, 2008, by caption on the consolidated balance sheet and by SFAS 157 (ASC 820-10) valuation hierarchy (as described above).

^(a) FIN 39 permits the netting of derivative receivables and derivative payables under legally enforceable master netting agreements and permits the netting of cash collateral.

^(b) Includes seed capital and certain interests in securitizations.

^(c) Includes loans classified as trading assets and certain interests in securitizations.

^(d) Includes private equity investments, seed capital and derivatives in designated hedging relationships. Includes certain financial instruments previously carried at fair value such as private equity investments whose accounting basis has not changed under a SFAS 159 (ASC 825-10) fair value option election.

^(e) Available for sale securities held at MUNB.

^(f) Included within other liabilities is the fair value adjustment for certain unfunded lending-related commitments and derivatives in designated hedging relationships and support agreements.

Changes in Level 3 fair value measurements

The tables below include a roll forward of the balance sheet amounts for the three and six month periods ended June 30, 2009 and 2008 (including the change in fair value), for financial instruments classified in Level 3 of the valuation hierarchy.

Our classification of a financial instrument in Level 3 of the valuation hierarchy is based on the significance of the unobservable factors to the overall fair value measurement. However, these instruments generally include other observable components that are actively quoted or validated to third party sources; accordingly, the gains and losses in the table below include changes in fair value due to observable parameters as well as

Edgar Filing: Bank of New York Mellon CORP - Form 10-Q

the unobservable parameters in our valuation methodologies. We also frequently manage the risks of Level 3 financial instruments using securities and derivatives positions that are Level 1 or 2 instruments which are not included in the table; accordingly, the gains or losses below do not reflect the effect of our risk management activities related to the Level 3 instruments.

In accordance with SFAS 157-4 (ASC 820-10), the Company adjusts the discount rate on securities to reflect what they would sell for in an orderly market (model price) and compares the model prices to prices provided by pricing sources. If the difference between the model price and the prices provided by pricing sources is outside of established thresholds, the securities are included in Level 3. In the second

Table of Contents**Notes to Consolidated Financial Statements** (continued)

quarter of 2009, the Company transferred securities from Level 3 to Level 2 because the price of the securities provided by the pricing sources began to converge with the model price of the securities determined by the Company.

Assets and liabilities measured at fair value on a nonrecurring basis

Under certain circumstances we make adjustments to fair value for our assets, liabilities and unfunded lending-related commitments although they are not measured at fair value on an ongoing basis. An example would be the recording of an

impairment of an asset. The following table presents the financial instruments carried on the consolidated balance sheet by caption and by level in the fair value hierarchy at June 30, 2009 and Dec. 31, 2008, for which a nonrecurring change in fair value has been recorded during the quarters ended June 30, 2009 and Dec. 31, 2008.

Table of Contents**Notes to Consolidated Financial Statements** (continued)**Assets measured at fair value on a nonrecurring basis at June 30, 2009**

<i>(in millions)</i>	Level 1	Level 2	Level 3	Total carrying value
Loans ^(a)	\$ -	\$ 43	\$ 214	\$ 257
Other assets ^(b)	-	5	-	5
Total assets at fair value on a nonrecurring basis	\$ -	\$ 48	\$ 214	\$ 262

Assets measured at fair value on a nonrecurring basis at Dec. 31, 2008

<i>(in millions)</i>	Level 1	Level 2	Level 3	Total carrying value
Loans ^(a)	\$ 14	\$ 43	\$ 161	\$ 218
Other assets ^(b)	-	6	-	6
Total assets at fair value on a nonrecurring basis	\$ 14	\$ 49	\$ 161	\$ 224

^(a) During the quarters ended June 30, 2009 and Dec. 31, 2008, the fair value of these loans was reduced \$55 million and \$35 million, based on the fair value of the underlying collateral as allowed by SFAS 114 (ASC 310-10), Accounting by Creditors for Impairment of a loan, with an offset to the allowance for credit losses.

^(b) Other assets received in satisfaction of debt. The fair value of these assets was reduced \$16 million in the second quarter of 2009 and was reduced \$2 million in the fourth quarter of 2008, based on the fair value of the underlying collateral with an offset in other revenue.

Note 17 Fair value option

SFAS 159 (ASC 825-10) provides an option to elect fair value as an alternative measurement for selected financial assets, financial liabilities, unrecognized firm commitments, and written loan commitments not previously carried at fair value.

At Dec. 31, 2008, \$5.6 billion of other short-term U.S. government-backed commercial paper and \$5.6 billion of borrowings from Federal Reserve related to asset-backed commercial paper were held at fair value. There were no balances outstanding for these instruments at June 30, 2009.

Changes in fair value under the fair value option election

The following table presents the changes in fair value included in foreign exchange and other trading activities in the consolidated income statement for the three and six month periods ended June 30, 2009 and 2008.

Foreign exchange and other

Edgar Filing: Bank of New York Mellon CORP - Form 10-Q

trading activities

<i>(in millions)</i>	Quarter ended		Six months ended	
	June 30, 2009	June 30, 2008	June 30, 2009	June 30, 2008
Loans	\$ 1	\$ 35	\$ 2	\$ 66
Other liabilities	1	-	(1)	(1)

At June 30, 2009, the fair market value of unfunded lending-related commitments for which the fair value option was elected was a liability of \$1 million at June 30, 2009 and \$3 million at Dec. 31, 2008 and is included in other liabilities. The contractual amount of such commitments was \$110 million at both June 30, 2009 and Dec. 31, 2008.

Note 18 Derivative instruments

We use derivatives to manage exposure to market risk, interest rate risk, credit risk, foreign currency risk, to generate profits from proprietary trading and to assist customers with their risk management objectives.

The notional amounts for derivative financial instruments express the dollar volume of the transactions; however, credit risk is much smaller. We perform credit reviews and enter into netting agreements to minimize the credit risk of foreign

Table of Contents**Notes to Consolidated Financial Statements** (continued)

currency and interest rate risk management products. We enter into offsetting positions to reduce exposure to foreign exchange and interest rate risk.

Use of derivative financial instruments involves reliance on counterparties. Failure of a counterparty to honor its obligation under a derivative contract is a risk we assume whenever we engage in a derivative contract. There were no counterparty default losses in the first half of 2009.

Hedging derivatives

We utilize interest rate swap agreements to manage our exposure to interest rate fluctuations. For hedges of fixed-rate loans, asset-backed securities, deposits and long-term debt, the hedge documentation specifies the terms of the hedged items and the interest rate swaps and indicates that the derivative is hedging a fixed-rate item and is a fair value hedge, that the hedge exposure is to the changes in the fair value of the hedged item due to changes in benchmark interest rates, and that the strategy is to eliminate fair value variability by converting fixed-rate interest payments to LIBOR.

The fixed rate loans hedged generally have an original maturity of 10 to 11 years and are not callable. These loans are hedged with pay fixed rate, receive variable rate swaps with similar notional amounts, maturities, and fixed rate coupons. The swaps are not callable. At June 30, 2009, \$2 million of loans were hedged with interest rate swaps, which had notional values of \$2 million.

The securities hedged generally have a weighted average life of 10 years or less and are callable six months prior to maturity. These securities are hedged with pay fixed rate, receive variable rate swaps of like maturity, repricing and fixed rate coupon. The swaps are callable six months prior to maturity. At June 30, 2009, \$214 million of securities were hedged with interest rate swaps that had notional values of \$214 million.

The fixed rate deposits hedged generally have original maturities of 5 to 11 years and are not callable. These deposits are hedged with receive fixed rate, pay variable rate swaps of similar maturity, repricing and fixed rate coupon. The swaps are not callable. At June 30, 2009, \$30 million of deposits were hedged with interest rate swaps that had notional values of \$30 million.

The fixed rate long-term debt hedged generally has an original maturity of 5 to 30 years. We issue both callable and non-callable debt. The non-callable debt is hedged with simple interest rate swaps similar to those described for deposits. Callable debt is hedged with callable swaps where the call dates of the swaps exactly match the call dates of the debt. At June 30, 2009, \$11.7 billion of debt was hedged with interest rate swaps that had notional values of \$11.3 billion.

In addition, we enter into foreign exchange hedges. We use forward foreign exchange contracts with maturities of 12 months or less to hedge our Sterling, Euro and Indian Rupee foreign exchange exposure with respect to forecasted revenue transactions in non-U.S. entities that have the U.S. dollar as their functional currency. As of June 30, 2009, the hedged forecasted foreign currency transactions and linked FX forward hedges were \$61 million, with \$2 million (pre-tax) of losses recorded in other comprehensive income. These gains are expected to be reclassified to income over the next nine months.

We also use forward foreign exchange contracts with original maturities of 10 months or less to hedge our Euro and Japanese Yen foreign exchange exposure with respect to forecasted foreign currency net revenue where we cannot elect hedge accounting. At June 30, 2009, these economic hedges had a U.S. dollar equivalent notional value of \$34 million, with \$3.0 million (pre-tax) of losses from those FX forward hedges recorded in foreign exchange and other trading activities.

Forward foreign exchange contracts are also used to hedge the value of our net investments in foreign subsidiaries. These forward contracts usually have maturities of less than two years. The derivatives employed are designated as net investments hedges of changes in value of our foreign investments due to exchange rates, such that changes in value of the forward exchange contracts offset the changes in value of the foreign investments due to changes in foreign exchange rates. The change in fair market

Table of Contents**Notes to Consolidated Financial Statements** (continued)

value of these contracts is deferred and reported within accumulated translation adjustments in shareholders' equity, net of tax effects. At June 30, 2009, foreign exchange contracts, with notional amounts totaling \$3.7 billion, were designated as hedges.

In addition to forward foreign exchange contracts, we also designate non-derivative financial instruments as hedges of our net investments in foreign subsidiaries. Those non-derivative financial instruments designated as hedges of our net investments in foreign subsidiaries were all long-term liabilities of the Company in various currencies, and, at June 30, 2009, had a combined U.S. dollar equivalent value of \$899 million.

Ineffectiveness related to derivatives and hedging relationships was recorded in income as follows:

Ineffectiveness (in millions)	Six months ended	
	June 30, 2009	June 30, 2008
Fair value hedge of loans	\$ (0.1)	\$ 0.1
Fair value hedge of securities	(0.1)	(0.1)

Fair value after effect of master netting agreements			\$ 6,579	\$ 10,810	\$ 6,135	\$ 7,437

(a) Derivative financial instruments are reported net of cash collateral received and paid of \$648 million and \$30 million, respectively at June 30, 2009 and \$817 million and \$1.8 billion, respectively at Dec. 31, 2008.

(b) Fair values are on a gross basis, before consideration of master netting agreements, as required by SFAS No. 161 (ASC 815-10).

(c) The fair value of asset derivatives and liability derivatives designated as hedging instruments is recorded as other assets and other liabilities, respectively, on the balance sheet.

(d) The fair value of asset derivatives and liability derivatives not designated as hedging instruments is recorded as trading assets and trading liabilities, respectively, on the balance sheet.

At June 30, 2009, approximately \$603 billion (notional) of interest rate contracts will mature within one year, \$252 billion between one and five years, and the balance after five years.

At June 30, 2009, approximately \$251 billion (notional) of foreign exchange contracts will mature within one year and \$9 billion between one and five years, and the balance after five years.

Trading activities (including trading derivatives)

Our trading activities are focused on acting as a market maker for our customers. The risk from these market-making activities and from our own positions is managed by our traders and limited in total exposure as described below.

We manage trading risk through a system of position limits, a value-at-risk (VAR) methodology based on Monte Carlo simulations, stop loss advisory triggers, and other market sensitivity measures. Risk is monitored and reported to senior management by a separate unit on a daily basis. Based on certain assumptions, the VAR methodology is designed to

capture the potential overnight pre-tax dollar loss from adverse changes in fair values of all trading positions. The calculation assumes a one-day holding period for most instruments, utilizes a 99% confidence level, and incorporates the non-linear characteristics of options. The VAR model is the basis for the economic capital calculation, which is allocated to lines of business for computing risk-adjusted performance.

As the VAR methodology does not evaluate risk attributable to extraordinary financial, economic or other occurrences, the risk assessment process includes a number of stress scenarios based upon the risk factors in the portfolio and management s

Table of Contents**Notes to Consolidated Financial Statements** (continued)

assessment of market conditions. Additional stress scenarios based upon historic market events are also performed. Stress tests, by their design, incorporate the impact of reduced liquidity and the breakdown of observed correlations. The results of these stress tests are reviewed weekly with senior management.

Revenue from foreign exchange and other trading activities included the following:

Foreign exchange and other trading activities

<i>(in millions)</i>	Quarter ended			Six months ended	
	June 30, 2009	March 31, 2009	June 30, 2008	June 30, 2009	June 30, 2008
Foreign exchange	\$ 240	\$ 219	\$ 259	\$ 459	\$ 486
Fixed income	37	75	48	112	59
Credit derivatives	(45)	(1)	(20)	(46)	(19)
Other	5	14	21	19	41
Total	\$ 237	\$ 307	\$ 308	\$ 544	\$ 567

Foreign exchange includes income from purchasing and selling foreign exchange, futures, and options. Fixed income reflects results from futures and forward contracts, interest rate swaps, foreign currency swaps, options and fixed income securities. Credit derivatives include revenue from credit default swaps. Other primarily includes income from equity securities and equity derivatives.

Counterparty credit risk and collateral

We assess credit risk of our counterparties through regular periodic examination of their financial statements, confidential communication with the management of those counterparties and regular monitoring of publicly available credit rating information. This and other information is used to develop proprietary credit rating metrics used to assess credit quality.

Collateral requirements are determined after a comprehensive review of the credit quality of each counterparty. Collateral is generally held in the form of cash or highly liquid government securities. Collateral requirements are monitored and adjusted daily.

Additional disclosures concerning derivative financial instruments are provided in Note 16 of the Notes to Consolidated Financial Statements.

Disclosure of Contingent Features in Over-the-Counter (OTC) Derivative Instruments

Certain of the Company's OTC derivative contracts and/or collateral agreements contain provisions that would require the Company to take certain actions if its public debt rating fell to a certain level. A close-out agreement could trigger an immediate closeout and payment of outstanding contracts that are in net liability positions. Certain collateral agreements would require the Company to immediately post additional collateral to cover some or all of the Company's liabilities to a counterparty.

The following table shows the fair value of contracts falling under close-out agreements that were in net liability positions as of June 30, 2009 for three key ratings triggers

Edgar Filing: Bank of New York Mellon CORP - Form 10-Q

If the Company's rating

was changed to	Potential close-out exposures (fair value)
A3/A-	\$373 million
Baa2/BBB	\$524 million
Bal/BB+	\$948 million

Additionally, if the Company's debt rating had fallen below investment grade on June 30, 2009, existing collateral arrangements would have required the Company to have posted an additional \$562 million of collateral.

The Bank of New York Mellon Corporation 103

Table of Contents**Notes to Consolidated Financial Statements** (continued)**Note 19 Commitments and contingent liabilities**

In the normal course of business, various commitments and contingent liabilities are outstanding which are not reflected in the accompanying consolidated balance sheets.

Our significant trading and off-balance sheet risks are securities, foreign currency and interest rate risk management products, commercial lending commitments, letters of credit, and securities lending indemnifications. We assume these risks to reduce interest rate and foreign currency risks, to provide customers with the ability to meet credit and liquidity needs, to hedge foreign currency and interest rate risks, and to trade for our own account. These items involve, to varying degrees, credit, foreign exchange, and interest rate risk not recognized in the balance sheet. Our off-balance sheet risks are managed and monitored in manners similar to those used for on-balance-sheet risks. Significant industry concentrations related to credit exposure at June 30, 2009 are disclosed in the Financial institutions portfolio exposure table and the Commercial portfolio exposure table below.

Financial institutions	June 30, 2009		
portfolio exposure			
<i>(in billions)</i>	Loans	Unfunded commitments	Total exposure
Securities industry	\$ 5.7	\$ 2.0	\$ 7.7
Insurance	0.5	6.2	6.7
Banks	3.0	3.1	6.1
Asset managers	0.9	3.2	4.1
Government	0.3	3.1	3.4
Other	0.7	2.3	3.0
Total	\$ 11.1	\$ 19.9	\$ 31.0

Commercial	June 30, 2009		
portfolio exposure			
<i>(in billions)</i>	Loans	Unfunded commitments	Total exposure
Media and telecom	\$ 0.9	\$ 2.0	\$ 2.9
Manufacturing	1.4	6.8	8.2
Energy and utilities	1.0	6.7	7.7
Services and other	1.3	8.8	10.1
Total	\$ 4.6	\$ 24.3	\$ 28.9

Major concentrations in securities lending are primarily to broker-dealers and are generally collateralized with cash. Securities lending transactions are discussed below.

A summary of our off-balance sheet credit transactions, net of participations, at June 30, 2009 and Dec. 31, 2008 follows:

Off-balance sheet credit risks	June 30, 2009	Dec. 31, 2008
---------------------------------------	--------------------------	------------------

Edgar Filing: Bank of New York Mellon CORP - Form 10-Q

(in millions)

Lending commitments ^(a)	\$ 34,706	\$ 38,822
Standby letters of credit ^(b)	12,394	13,084
Commercial letters of credit	940	705
Securities lending indemnifications	289,864	325,975
Support agreements	266	244

^(a) Net of participations totaling \$789 million at June 30, 2009 and \$986 million at Dec. 31, 2008.

^(b) Net of participations totaling \$2.7 billion at both June 30, 2009 and Dec. 31, 2008.

Included in lending commitments are facilities which provide liquidity, primarily for variable rate tax exempt securities wrapped by monoline insurers. The credit approval for these facilities is based on an assessment of the underlying tax-exempt issuer and considers factors other than the financial strength of the monoline insurer.

The total potential loss on undrawn lending commitments, standby and commercial letters of credit, and securities lending indemnifications is equal to the total notional amount if drawn upon, which does not consider the value of any collateral.

Since many of the commitments are expected to expire without being drawn upon, the total amount does not necessarily represent future cash requirements. The allowance for lending related commitments was \$92 million at June 30, 2009 and \$114 million at Dec. 31, 2008. A summary of lending commitment maturities is as follows: \$12 billion less than one year; \$22 billion in one to five years, and \$1 billion over five years.

Standby letters of credit (SBLC) principally support corporate obligations. As shown in the off-balance sheet credit risks table, the maximum potential exposure of SBLCs at June 30, 2009 was \$12.4 billion and at Dec. 31, 2008 was \$13.1 billion and includes \$1.0 billion that were collateralized with cash and securities on June 30, 2009 and \$1.1 billion on Dec. 31, 2008. At June 30, 2009, approximately \$7.5 billion of the SBLCs will expire within one year and the remaining \$4.9 billion will expire within one to five years.

The estimated liability for losses related to these commitments and SBLCs, if any, is included in the allowance for lending related commitments.

Table of Contents**Notes to Consolidated Financial Statements** (continued)

Payment/performance risk of SBLCs is monitored using both historical performance and internal ratings criteria. The Company's historical experience is that SBLCs typically expire without being funded. SBLCs below investment grade are monitored closely for payment/performance risk. The table below shows SBLCs by investment grade:

Standby letters of credit	June 30, 2009	Dec. 31, 2008
Investment grade	87%	89%
Noninvestment grade	13	11%

A securities lending transaction is a fully collateralized transaction in which the owner of a security agrees to lend the security (typically through an agent, in our case, The Bank of New York Mellon), to a borrower, usually a broker-dealer or bank, on an open, overnight or term basis, under the terms of a prearranged contract, which generally matures in less than 90 days. We generally lend securities with indemnification against broker default. We generally require the borrower to provide 102% cash collateral which is monitored on a daily basis, thus reducing credit risk. Security lending transactions are generally entered into only with highly-rated counterparties. Securities lending indemnifications were secured by collateral of \$313 billion at June 30, 2009 and \$335 billion at Dec. 31, 2008.

Our potential exposure to support agreements was approximately \$266 million at June 30, 2009 compared with \$244 million at Dec. 31, 2008. Potential support agreement exposure is determined based on the securities subject to these agreements being valued at zero and the NAV of the related funds declining below established thresholds. This exposure includes agreements covering Lehman securities, as well as other client support agreements.

Other

We have provided standard representations for underwriting agreements, acquisition and divestiture agreements, sales of loans and commitments, and other similar types of arrangements and customary indemnification for claims and legal proceedings related to providing financial services. Insurance has been purchased to mitigate certain of these risks.

We are a minority equity investor in, and member of, several industry clearing or settlement exchanges through which foreign exchange, securities, or other transactions settle. Certain of these industry clearing or settlement exchanges require their members to guarantee their obligations and liabilities or to provide financial support in the event other partners do not honor their obligations. It is not possible to estimate a maximum potential amount of payments that could be required with such agreements.

Legal Proceedings

In the ordinary course of business, the Company and its subsidiaries are routinely defendants in or parties to a number of pending and potential legal actions, including actions brought on behalf of various classes of claimants, and regulatory matters. Claims for significant monetary damages are asserted in certain of these actions and proceedings. In regulatory enforcement matters, claims for disgorgement and the imposition of penalties and/or other remedial sanctions are possible. Due to the inherent difficulty of predicting the outcome of such matters, the Company cannot ascertain what the eventual outcome of these matters will be; however, on the basis of current knowledge and after consultation with legal counsel, we do not believe that enforceable judgments or settlements, if any, arising from pending or potential legal actions or regulatory matters, either individually or in the aggregate, after giving effect to applicable reserves and insurance coverage, will have a material adverse effect on the consolidated financial position or liquidity of the Company, although they could have a material effect on net income for a given period. The Company intends to defend itself vigorously against all of the claims asserted in these legal actions.

As previously disclosed in the Company's Form 8-K dated May 17, 2007, the Federal Customs Service of the Russian Federation is pursuing a claim against The Bank of New York, now The Bank of New York Mellon (the "Bank"), a subsidiary of the Company. The claim is based on allegations relating to the previously disclosed Russian funds transfer matter, and alleges that the Bank violated U.S. law by failing to supervise and monitor funds transfer activities at the Bank. This "lack of action" is alleged to have resulted in underpayment to the Russian Federation of the value added taxes that were due to be paid by

Table of Contents

Notes to Consolidated Financial Statements (continued)

the customers of the bank's clients on certain goods imported into the country. The claim seeks \$22.5 billion in direct and indirect losses.

The Bank has been defending itself vigorously in this matter and intends to continue to do so. The Bank believes it has meritorious procedural and substantive defenses to the allegations in the Russian courts and also believes it has meritorious defenses to an attempted enforcement of a judgment outside the Russian Federation in countries in which the Bank has material assets if a judgment were to be entered in this matter by the Russian courts. The Bank has engaged in settlement discussions with representatives of the Customs Service and has indicated that the Bank is willing to accept a reasonable resolution of this matter, which reflects its lack of merit. There can be no assurance that a resolution will be reached.

As previously disclosed, the Bank filed a proof of claim on Jan. 18, 2008, in the Chapter 11 bankruptcy of Sentinel Management Group, Inc. (Sentinel), seeking to recover approximately \$312 million loaned to Sentinel and secured by securities and cash in an account maintained by Sentinel at the Bank. Pursuant to a Plan of Reorganization confirmed by the Bankruptcy Court on Dec. 8, 2008, \$370 million of cash has been set aside as a reserve, to be used by the Bank if its proof of claim is allowed in the bankruptcy. On March 3, 2008, the bankruptcy trustee filed an adversary complaint against the Company seeking to disallow the Bank's claim and seeking damages against the Bank for allegedly aiding and abetting Sentinel insiders in misappropriating customer assets and improperly using them as collateral for the loan. The Company has learned from the Commodities Futures Trading Commission (CFTC) that it has opened an investigation of the Bank in connection with its relationship to Sentinel.

As previously disclosed in the Company's 2007 Annual Report on Form 10-K, the U.S. Securities and Exchange Commission (SEC) is investigating the trading activities of Pershing Trading Company LP (Pershing), a floor specialist, on two regional exchanges from 1999 to 2004.

As previously disclosed, in connection with the acquired JPMorgan Chase corporate trust business, the Bank was required to file various IRS information and withholding tax returns for 2006. In preparing to do so, the Bank identified

certain inconsistencies in the supporting tax documentation and records transferred to the Bank that were needed to file accurate returns. The Company was informed in the second quarter of 2009 by JPMorgan Chase that all issues concerning 2006 had been resolved with the IRS. Accordingly, the Company has no further exposure for potential tax reporting deficiencies attributable to the 2006 JPMorgan Chase corporate trust business.

As previously disclosed, in the fourth quarter of 2007, we also discovered that other business lines, including the legacy The Bank of New York corporate trust business, may have similar issues and initiated an extensive company-wide review to identify any inconsistencies in the supporting tax documentation. Any deficiencies that are identified will be promptly remediated. We made an initial disclosure of this matter to the IRS on a voluntary basis in the fourth quarter of 2007 and we continue to work diligently with the IRS to help resolve the matter. The Company recorded a \$13 million reserve as of June 30, 2009 which represents its estimate of the potential exposure from tax reporting inconsistencies based on the remediation status and discussions with the IRS to date.

As previously disclosed, during 2001 and 2002, we entered into various structured transactions that involved, among other things, the payment of U.K. corporate income taxes that were credited against our U.S. corporate income tax liability.

On Sept. 30, 2008, as part of our closing agreement for the 1998-2002 federal audit cycle, the IRS designated one such transaction for litigation and we agreed to litigate in the U.S. Tax Court.

The transaction involved payments of U.K. corporate income taxes that generated foreign tax credits over the 2001-2006 period. The IRS has indicated it intends to seek to disallow the foreign tax credits primarily on the basis the transaction lacked economic substance. We are prepared to vigorously defend our position.

While we have not yet received a statutory notice of deficiency, during the second quarter of 2009 we deposited approximately \$800 million with the IRS to mitigate interest costs that could arise with this disputed tax assessment. The Company believes the tax benefits associated with the transaction were

Table of Contents

Notes to Consolidated Financial Statements (continued)

consistent with IRS published guidance existing at the time the transaction was entered into and with various federal appellate court decisions. In the event the Company is unsuccessful in defending its position, the IRS has agreed not to assess underpayment penalties on this transaction.

Based on a probability assessment of various potential outcomes, we currently believe our accruals for tax liabilities are adequate for all open years. Probabilities and outcomes are reviewed as events unfold, and adjustments to the tax liabilities are made when appropriate.

As previously disclosed, the Company self-disclosed to the SEC that Mellon Financial Markets LLC (MFM) placed orders on behalf of issuers to purchase their own Auction Rate Securities. The SEC and certain state authorities, including the Texas State Securities Board, Florida Office of Financial Regulation, and the New York Attorney General are investigating these transactions. MFM is cooperating fully with the investigations.

As previously disclosed, the Company became aware of circumstances suggesting that employees of Mellon Securities LLC (Mellon Securities), which executes orders to purchase and sell securities on behalf of Mellon Investor Services LLC, failed to comply with certain best execution and regulatory requirements in connection with agency cross trades. The Company self-disclosed this matter to the Financial Industry Regulatory Authority, Inc. (FINRA) and the SEC on a voluntary basis. In June 2009, the SEC obtained a formal order of investigation. Mellon Securities is cooperating fully with the investigation.

As previously disclosed, in April 2009, BNY MCM entered into a letter of Acceptance, Waiver and Consent with FINRA relating to the sale of Auction Rate Securities (ARS). Two institutional customers not included in the FINRA settlement have filed lawsuits and one such customer has filed an arbitration proceeding against BNY MCM, alleging misrepresentations and omissions in the sale of ARS to them.

A number of participants in the securities lending program, which is associated with the Company's asset servicing business, have filed or threatened lawsuits against the Company or its affiliates. The participants allege that they have incurred losses, including losses related to investments in

Sigma Finance Inc., and seek damages as to those losses. Certain of these cases seek to proceed as class actions. The participants assert contractual, statutory, and common law claims, including claims for negligence and breach of fiduciary duty.

Bernard L. Madoff has pleaded guilty to engaging in a massive investment fraud through his company, Bernard L. Madoff Investment Securities LLC (Madoff). As previously disclosed, the Company has no direct exposure to the Madoff fraud. Ivy Asset Management LLC (Ivy), a subsidiary that primarily manages funds-of-hedge-funds, has not had any funds-of-funds investments with Madoff since 2000. Several investment managers contracted with Ivy as a sub-advisor and one pension fund contracted with Ivy as investment manager; a portion of these funds were invested with Madoff and likely suffered losses as a result of the Madoff fraud.

The Company and its affiliates, including Ivy, have received subpoenas and document requests in connection with a number of regulatory inquiries regarding Madoff and have been cooperating with these inquiries.

The Company or its affiliates have been named in several civil lawsuits relating to certain investment funds that invested money with Madoff. Ivy acted as a sub-advisor to the managers of some of those funds. Plaintiffs allege that the funds suffered losses in connection with the Madoff investments. Plaintiffs assert various causes of action against the Company or its affiliates, and other parties, including securities and common-law fraud. Certain of the cases seek to proceed as class actions and/or to assert derivative claims on behalf of the funds.

Note 20 Business segments

Business segments accounting principles

Our segment data has been determined on an internal management basis of accounting, rather than the generally accepted accounting principles used for consolidated financial reporting. These measurement principles are designed so that reported results of the segments will track their economic performance.

Segment results are subject to reclassification whenever improvements are made in the

Table of Contents

Notes to Consolidated Financial Statements (continued)

measurement principles or when organizational changes are made.

The accounting policies of the business segments are the same as those described in Note 1 to the Consolidated Financial Statements in the Company's 2008 Annual Report on Form 10-K, except that other fee revenue and net interest revenue differ from the amounts shown in the Consolidated Income Statement because amounts presented in Business segments are on an FTE basis.

In the second quarter of 2009, the financial results of MUNB were moved from the Other segment into discontinued operations. Historical results in the Other segment have been restated.

The operations of acquired businesses are integrated with the existing business segments soon after most acquisitions are completed. As a result of the integration of staff support functions, management of customer relationships, operating processes and the financial impact of funding acquisitions, we cannot precisely determine the impact of acquisitions on income before taxes and therefore do not report it.

We provide segment data for seven segments, with certain segments combined into sector groupings as shown below.

Sector/Segment	Primary types of revenue
Asset and Wealth Management sector Asset Management segment	Asset and wealth management fees from: Mutual funds Institutional clients Private clients Performance fees
Wealth Management segment	Distribution and servicing fees Wealth management fees from high-net-worth individuals and families, family offices and business enterprises, charitable gift programs, and foundations and endowments
Institutional Services sector Asset Servicing segment	Asset servicing fees, including: Institutional trust and custody fees Broker-dealer services Securities lending

Edgar Filing: Bank of New York Mellon CORP - Form 10-Q

Issuer Services segment	Foreign exchange Issuer services fees, including: Corporate trust Depository receipts Employee investment plan services
Clearing Services segment	Shareowner services Clearing services fees, including broker-dealer and registered investment advisor services
Treasury Services segment	Treasury services fees, including: Global payment services Working capital solutions
Other segment	Financing-related fees Leasing operations Corporate treasury activities Global markets and institutional banking services Business exits M&I expenses

Table of Contents

Notes to Consolidated Financial Statements (continued)

Business segment information is reported on a continuing operations basis for all periods presented. See Note 4 to the Notes to Consolidated Financial Statements for a discussion of discontinued operations.

The results of our business segments are presented and analyzed on an internal management reporting basis:

Revenue amounts reflect fee and other revenue generated by each segment. Fee and other revenue transferred between segments under revenue transfer agreements is included within other revenue in each segment.

Revenues and expenses associated with specific client bases are included in those segments. For example, foreign exchange activity associated with clients using custody products is allocated to the Asset Servicing segment.

Net interest revenue is allocated to segments based on the yields on the assets and liabilities generated by each segment. We employ a funds transfer pricing system that matches funds with the specific assets and liabilities of each segment based on their interest sensitivity and maturity characteristics.

The measure of revenues and pre-tax profit or loss by a segment has been adjusted to present segment data on an FTE basis.

Support and other indirect expenses are allocated to segments based on internally-developed methodologies.

The FDIC special emergency deposit assessment is considered a corporate charge and was therefore recorded in the Other segment.

Recurring FDIC expense is allocated to segments based on average deposits generated within each segment.

Support agreement charges are recorded in the segment in which the charges occurred.

Restructuring charges are a result of corporate initiatives and therefore are recorded in the Other segment.

Balance sheet assets and liabilities and their related income or expense are specifically assigned to each segment. Segments with a net liability position have been allocated assets.

Goodwill and intangible assets are reflected within individual business segments.

The following consolidating schedules show the contribution of our segments to our overall profitability.

For the quarter ended June 30, 2009

Item 4. Controls and Procedures

Disclosure controls and procedures

Our management, including the Chief Executive Officer and Chief Financial Officer, with participation by the members of the Disclosure Committee, has responsibility for ensuring that there is an adequate and effective process for establishing, maintaining, and evaluating disclosure controls and procedures that are designed to ensure that information required to be disclosed by us in our SEC reports is timely recorded, processed, summarized and reported and that information required to be disclosed by the Company is accumulated and communicated to the Company's management to allow timely decisions regarding the required disclosure. In addition, our ethics hotline can also be used by employees and others for the anonymous communication of concerns about financial controls or reporting matters. There are inherent limitations to the effectiveness of any system of disclosure controls and procedures, including the possibility of human error and the circumvention or overriding of the controls and procedures. Accordingly, even effective disclosure controls and procedures can only provide reasonable assurance of achieving their control objectives.

As of the end of the period covered by this report, an evaluation was carried out under the supervision and with the participation of our management, including the Chief Executive Officer and Chief Financial Officer, of the effectiveness of our disclosure controls and procedures as defined in Exchange Act Rule 13a-15(e) and 15d-15(e). Based on that evaluation, the Chief Executive Officer and Chief Financial Officer concluded that our disclosure controls and procedures were effective.

Changes in internal control over financial reporting

In the ordinary course of business, we may routinely modify, upgrade or enhance our internal controls and procedures for financial reporting. There have not been any changes in our internal controls over financial reporting as defined in Rule 13a-15(f) and 15d-15(f) of the Exchange Act during the second quarter of 2009 that have materially affected, or are reasonably likely to materially affect, our internal control over financial reporting.

Table of Contents

Forward-looking Statements

Some statements in this document are forward-looking. These include all statements about the future results of the Company; areas of our business expected to be impacted by the current market environment; the impact of changes in the value of market indices; factors affecting the performance of our segments; the effect of economic conditions on goodwill and intangible assets; management's judgment in determining the size of unallocated allowances and the effect of credit ratings on allowances, estimates and cash flow models. In addition, these forward-looking statements relate to: our strategic focus, including the planned sale of Mellon United National Bank; the expected increase in the percentage of revenue and income from outside the U.S.; targeted capital ratios; the FDIC's extension of certain programs created to address market events and expenses incurred with respect to these programs; deposit levels; our decision to reduce cash held at central banks and invest in certain types of securities; expectations with respect to earnings per share; statements with respect to the value of our securities portfolio and our intent to hold securities until maturity; assumptions with respect to residential mortgage-backed securities; expected losses included in securities write-downs and impairments; statements on our institutional credit strategies; goals with respect to our commercial portfolio; trends in the real estate market; descriptions of our allowance for credit losses and loan losses; expectations with respect to the increase in nonperforming assets; descriptions of our exposure to support agreements; statements with respect to our liquidity targets, including the effect of reductions in securities servicing; access to capital markets; expectations with respect to capital, including anticipated repayment and call of outstanding debt and issuance of replacement securities; timing and impact of adoption of recent accounting pronouncements; the materiality of acquisitions; the timing of our reductions in workforce; amount of dividends bank subsidiaries can pay without regulatory waiver; the expected outcome and impact of judgments and settlements, if any, arising from pending or potential legal or regulatory proceedings, including the claims raised by The Federal Customs Service of the Russian Federation.

In this report, any other report, any press release or any written or oral statement that the Company or its executives may make, words, such as estimate, forecast, project, anticipate,

confident, target, expect, intend, seek, believe, plan, goal, could, should, may, will, strategy, synergies, opportunity, meaning, signify forward-looking statements.

Factors that could cause the Company's results to differ materially from those described in the forward-looking statements, as well as other uncertainties affecting future results and the value of the Company's stock and factors which represents risk associated with the business and operations of the Company, can be found in Risk Factors in the Form 10-K for the year ended Dec. 31, 2008 and in the Form 10-Q for the quarter ended March 31, 2009, and any subsequent reports filed with the Securities and Exchange Commission (the Commission) by the Company pursuant to the Securities Exchange Act of 1934, as amended (the Exchange Act).

Forward-looking statements, including discussions and projections of future results of operations and discussions of future plans contained in the MD&A, are based on management's current expectations and assumptions that involve risk and uncertainties and that are subject to change based on various important factors (some of which are beyond the Company's control), including adverse changes in market conditions, and the timing of such changes, and the actions that management could take in response to these changes. Actual results may differ materially from those expressed or implied as a result of these risks and uncertainties and the risks and uncertainties described in the documents referred to in the preceding paragraph. The Risk Factors discussed in the Form 10-K for the year ended Dec. 31, 2008 and in the Form 10-Q for the quarter ended March 31, 2009 could cause or contribute to such differences. Investors should consider all risks mentioned elsewhere in this document and in subsequent reports filed by the Company with the Commission pursuant to the Exchange Act, as well as other uncertainties affecting future results and the value of the Company's stock.

All forward-looking statements speak only as of the date on which such statements are made, and the Company undertakes no obligation to update any statement to reflect events or circumstances after the date on which such statement is made or to reflect the occurrence of unanticipated events.

Table of Contents**Part II Other Information****Item 1. Legal Proceedings**

In the ordinary course of business, the Company and its subsidiaries are routinely defendants in or parties to a number of pending and potential legal actions, including actions brought on behalf of various classes of claimants, and regulatory matters. Claims for significant monetary damages are asserted in certain of these actions and proceedings. In regulatory enforcement matters, claims for disgorgement and the imposition of penalties and/or other remedial sanctions are possible. Due to the inherent difficulty of predicting the outcome of such matters, the Company cannot ascertain what the eventual outcome of these matters will be; however, on the basis of current knowledge and after consultation with legal counsel, we do not believe that enforceable judgments or settlements, if any, arising from pending or potential legal actions or regulatory matters, either individually or in the aggregate, after giving effect to applicable reserves and insurance coverage, will have a material adverse effect on the consolidated financial position or liquidity of the Company, although they could have a material effect on net income for a given period. The Company intends to defend itself vigorously against all of the claims asserted in these legal actions.

See the Legal proceedings section in Note 19 to the Notes to Consolidated Financial Statements, which portion is incorporated by reference in response to this item.

Item 2. Unregistered Sales of Equity Securities and Use of Proceeds

(c) The following table discloses repurchases of our common stock made in the second quarter of 2009.
Issuer purchases of equity securities

Share repurchases during second quarter 2009	Total shares repurchased	Average price per share	Total shares repurchased as part of a publicly announced plan
<i>(common shares in thousands)</i>			
April 2009	73	\$ 27.00	-
May 2009	14	\$ 27.75	-
June 2009	289	\$ 28.00	-
Second quarter 2009	376 ^(a)	\$ 27.79	-

^(a) These shares were purchased at a purchase price of approximately \$10 million from employees, primarily in connection with the employees' payment of taxes upon the vesting of restricted stock.

On Dec. 18, 2007, the Board of Directors of the Company authorized the repurchase of up to 35 million shares of common stock. There were no shares repurchased under this program in the second quarter of 2009.

At June 30, 2009, 33.8 million shares were available for repurchase under the December 2007 program. There is no expiration date on this repurchase program.

Item 4. Submission of Matters to a Vote of Security Holders.

At the Company's Annual Meeting of Shareholders, held on April 14, 2009, for which proxies were solicited pursuant to Regulation 14A under the Securities Exchange Act of 1934, as amended, the following matters were voted upon by shareholders.

Edgar Filing: Bank of New York Mellon CORP - Form 10-Q

1. The election of 15 directors for a term expiring in 2010:

Name of Director	Votes For	Votes Withheld
Ruth E. Bruch	953,901,771	41,271,572
Nicholas M. Donofrio	980,313,869	14,859,474

Catherine A. Rein	953,121,615	42,051,728
William C. Richardson	984,328,823	10,844,520
Samuel C. Scott III	914,945,762	80,227,581
John P. Surma	954,388,103	40,785,240
Wesley W. von Schack	910,892,803	84,280,540

2. Advisory (non-binding) vote regarding 2008 executive compensation (approved by a majority of votes cast):

For:	949,878,387
Against:	35,062,218
Abstain:	10,232,738

Table of Contents**Part II Other Information**(continued)

3. Ratification of the appointment of KPMG LLP as independent registered public accounting firm for fiscal year 2009 (approved by a majority of votes cast):

For:	980,641,687
Against:	11,896,522
Abstain:	2,635,134

4. Approval of stockholder proposal requesting cumulative voting in the election of directors (not approved by a majority of votes cast):

For:	319,695,660
Against:	565,917,288
Abstain:	4,350,391
Broker non-votes:	105,210,004

5. Approval of stockholder proposal requesting adoption of a 75% retention policy for shares acquired through compensation plans (not approved by a majority of votes cast):

For:	265,185,608
Against:	604,582,209
Abstain:	20,195,523
Broker non-votes:	105,210,003

Abstentions and broker non-votes are not counted as votes cast. There were no broker non-votes for Items 1, 2 or 3.

Item 6. Exhibits

Pursuant to the rules and regulations of the Securities and Exchange Commission, the Company has filed certain agreements as exhibits to this Quarterly Report on Form 10-Q. These agreements may contain representations and warranties by the parties. These representations and warranties have been made solely for the benefit of the other party or parties to such agreements and (i) may have been qualified by disclosures made to such other party or parties, (ii) were made only as of the date of such agreements or such other date(s) as may be specified in such agreements and are subject to more recent developments, which may not be fully reflected in our public disclosure, (iii) may reflect the allocation of risk among the parties to such agreements and (iv) may apply materiality standards different from what may be viewed as material to investors. Accordingly, these representations and warranties may not describe our actual state of affairs at the date hereof and should not be relied upon.

- 2.1 Amended and Restated Agreement and Plan of Merger, dated as of Dec. 3, 2006, as amended and restated as of Feb. 23, 2007, and as further amended and restated as of March 30, 2007, between The Bank of New York Company, Inc., Mellon Financial Corporation and The Bank of New York Mellon Corporation (the Company), incorporated by reference to Exhibit 2.1 to the Company's Current Report on Form 8-K as filed with the SEC on July 2, 2007.
- 3.1 Restated Certificate of Incorporation of The Bank of New York Mellon Corporation, incorporated by reference to Exhibit 3.1 to the Company's Current Report on Form 8-K as filed with the SEC on July 2, 2007.

Edgar Filing: Bank of New York Mellon CORP - Form 10-Q

- 3.2 Amended and Restated By-Laws of The Bank of New York Mellon Corporation, as amended April 14, 2009.
- 3.3 Certificate of Elimination of Series B Preferred Shares, incorporated by reference to Exhibit 3.1 to the Company's Current Report on Form 8-K as filed with the SEC on June 23, 2009.
