Check the appropriate box to indicate the rule pursuant to which this form is being filed, and provide the period to which the information in this form applies:

- Rule 13p-1 under the Securities Exchange Act (17 CFR 240.13p-1) for the reporting period from January 1 to December 31, 2015.

Section 1 - Conflict Minerals Disclosure

Item 1.01 Conflict Minerals Disclosure and Report

Houghton Mifflin Harcourt Company is a global learning company organized along two reportable segments, Education and Trade Publishing. As used in this report on Form SD, the terms the Company, we, or our refer to Houghton Mifflin Harcourt Company; the term Conflict Minerals Rule refers to Rule 13p-1 promulgated under the Securities Exchange Act of 1934, as amended; the term conflict minerals refers to columbite-tantalite (coltan), cassiterite and wolframite (including their derivatives tungsten, tantalum and tin) and gold; and the term covered countries refers to the Democratic Republic of the Congo and its adjoining countries the Central African Republic, South Sudan, Uganda, Rwanda, Burundi, Tanzania, Zambia and Angola.

(b) Conflict Minerals Disclosure

In order to comply with the Conflict Minerals Rule, the Company developed process guidelines (Process Guidelines) to, among other things (i) identify products that the Company manufactured or contracted to manufacture in a specified calendar year containing conflict minerals necessary to the functionality or production of such products; (ii) conduct a reasonable country of origin inquiry (RCOI) with respect to such conflict minerals, which inquiry is designed to determine whether any such conflict minerals originated from a covered country or were from recycled or scrap sources; and (iii) exercise due diligence on the source and chain of custody of such conflict minerals, the framework for which, among other aspects of our Process Guidelines, was designed to conform to an internationally recognized framework for due diligence measures for reasonable supply chain management of minerals from conflict-affected areas.

In accordance with our Process Guidelines we undertook an applicability assessment to determine whether any of the products that the Company manufactured or contracted to manufacture in 2015 may have contained conflict minerals (at risk products). Based on this applicability assessment, we determined that the Company contracted to manufacture products at risk of containing conflict minerals. Accordingly, we surveyed our manufacturing partners and direct suppliers of at-risk products with respect to, among other things, the existence and origin of any conflict minerals contained in such products, including the existence and origin of any conflict minerals contained in components thereof supplied to them from their suppliers, using the Conflict-Free Sourcing Initiative Conflict Minerals Reporting Template (CRMT 4.01b). As a result of these measures, we determined that a novelty book in our Trade Publishing segment (covered product) that the Company contracted to manufacture in 2015 contained small amounts of tin (in solder) and gold (in wiring) necessary to the functionality and production of the product (necessary conflict minerals).

Further, in accordance with our Process Guidelines we conducted a good faith reasonable country of origin inquiry to determine whether any of the necessary conflict minerals contained in the covered product originated from a covered country or were from recycled or scrap sources. Our RCOI included surveying our manufacturing partners and direct suppliers of at-risk products as discussed above. The survey results from the manufacturing partner of the covered product indicated that the necessary conflict minerals did not originate from a covered country (or from recycled or scrap sources). Based on the results of our RCOI, we have no reason to believe that the necessary conflict minerals contained in the covered product originated in a covered country.
