Investment description

Linked to the iShare[®] MSCI EAFE ETF

Unlike ordinary debt securities, the securities do not pay interest at a specified rate or repay a fixed amount of principal at maturity. Instead, the securities provide for a Redemption Amount that may be greater than, equal to or less than the Principal Amount of the securities, depending on the performance of the Fund from the Starting Price to the Ending Price.

The Redemption Amount will reflect the following terms:

If the price of the Fund increases:

You will receive the Principal Amount plus 175% participation in the upside performance of the Fund, subject to a maximum total return at maturity of 30% of the Principal Amount

If the price of the Fund decreases, but the decrease is not more than 10%, or equals the Starting Price:

You will be repaid the Principal Amount

If the price of the Fund decreases by more than 10%:

You will receive less than the Principal Amount and will have 1-to-1 downside exposure to the decrease in the price of the Fund in excess of 10%

Investors may lose up to 90% of the Principal Amount

All payments on the securities are subject to the credit risk of Canadian Imperial Bank of Commerce, and you will have no ability to pursue the Fund or the securities held by the Fund for payment; if the Issuer defaults on its obligations, you could lose some or all of your investment

No periodic interest payments or dividends

No exchange listing; designed to be held to maturity

The Issuer's estimated value of the securities on the date of the accompanying pricing supplement, based on the Issuer's internal pricing models, is \$937.50 per security. The estimated value of the securities is not an indication of actual profit to the Issuer or to any of the Issuer's affiliates, nor is it an indication of the price, if any, at which Wells Fargo Securities, LLC or any other person may be willing to buy the securities from you at any time after issuance. See "The Estimated Value of the Securities" in the accompanying pricing supplement.

Investing in the securities involves significant risks. See "Selected Risk Considerations" in this term sheet and "Risk Factors" in the accompanying pricing supplement, the accompanying prospectus supplement and prospectus.

This term sheet does not provide all of the information that an investor should consider prior to making an investment decision.

Investors should carefully review the pricing supplement, prospectus supplement and prospectus before making a decision to invest in the securities.

⁽¹⁾ The annualized rates of return are calculated on a semi-annual bond equivalent basis with compounding.

⁽²⁾ The Starting Price.

The above figures are for purposes of illustration only and may have been rounded for ease of analysis. The actual amount you receive on the Stated Maturity Date and the resulting pre-tax rates of return will depend on the actual Ending Price.

How the Redemption Amount is calculated

The Redemption Amount will be determined as follows:

If the Ending Price is greater than the Starting Price, the Redemption Amount will be equal to the lesser of:

(i) \$1,000 *plus*

$$\$1,000 \times \frac{\text{Ending Price} - \text{Starting Price}}{\text{Starting Price}} \times \text{Participation Rate} \quad ; \text{ and}$$

(ii) the Capped Value

If the Ending Price is less than or equal to the Starting Price, but greater than or equal to the Threshold Price, the Redemption Amount will be equal to \$1,000

If the Ending Price is less than the Threshold Price, the Redemption Amount will be equal to \$1,000 *minus*

$$\$1,000 \times \frac{\text{Threshold Price} - \text{Ending Price}}{\text{Starting Price}}$$

In such a case, you will lose up to 90% of your Principal Amount.
