Market Environment Overview

(unaudited)

The U.S. equity market, as measured by the S&P 500[®] Index, returned 19.66% for the 12-month fiscal period that ended August 31, 2018 (the period). The main drivers of positive returns included positive market sentiment following strong corporate earnings, reduced headwinds due to tax cuts and deregulation, gradual monetary policy normalization, and positive consumer and business survey data. However, this period also saw its first 10% market correction in nearly three years as volatility returned to U.S. equities after a multi-year stretch of low realized volatility. February 2018 is when the first bout of significant market volatility occurred, as the CBOE Volatility Index reached an intraday high of 50.30, a level not seen since 2015. However, in the months to follow, the markets would see both sharp rebounds before ultimately settling back to a path of normalcy. From the end of March 2018 through the end of the fiscal period, volatility decreased to more subdued levels.

The run-up during the second half of 2017 was characterized by the absence of significant market volatility in favor of generally steady gains. Positive economic sentiment powered equity markets forward, as indicated by stronger consumer and business survey data, and improved corporate profit growth numbers. Despite the positives, much of the attention that was put on the pro-growth fiscal stimulus softened substantially over the first six-months of 2018, as the market grappled with geopolitical risk in the form of ongoing discussions around trade wars and tariffs. Overall, large-cap companies lagged when compared to their mid-cap and small-cap counterparts. Small-cap companies, as represented by the Russell 2000 Index, returned 25.45% for the 12-month fiscal period. There continues to be risks that weigh heavily on the markets, particularly when it comes to whether the U.S. can make amicable trade deals with its major trading partner countries or avoid potential trade-war inducing policies.

The U.S. Federal Reserve (the Fed) continued to normalize monetary policy during this time. The Fed decided to raise their target interest rate three times in this fiscal period, once in 2017 and twice so far in 2018. Additionally, the Fed called for two additional rate hikes for the remainder of 2018, a slightly more hawkish approach than their previously documented stance, which called for only one more additional hike. The 10-year U.S. Treasury yield has increased from 2.12% at the beginning of the period, to 2.86% at the end of the period; reaching a high of 3.11% in mid-May of 2018. The yield curve continued to flatten as short-term rates have increased more than long-term rates. The spread between 2-year and 10-year U.S. Treasury yields has decreased from 0.79% at the beginning of the period to 0.23% at the end of the period.

U.S. short-term and long-term interest rates, as measured by the Fed funds rate, the 2-Year U.S. Treasury Note rate and the 10-Year U.S. Treasury Note rate, rose 0.75%, 1.30%, and 0.74%, respectively over the period. U.S. short-term rates were driven by the Fed raising rates three times in 0.25% increments as they viewed measures of financial conditions positing the U.S. economy's ability to withstand monetary tightening. With geopolitical concerns and continued rate normalization policies, interest rate volatility picked up on the longer end of the curve in the first six-months of 2018. This volatility was somewhat exacerbated by the hawkish sentiment when the Fed signaled for an additional rate hike for the remainder of 2018; equaling four hikes total by the end of the 2018 calendar year.

During the last four months of 2017, investment grade and high yield spreads, as measured by the ICE BofA Merrill Lynch U.S. Corporate Master Option-Adjusted Spread and the ICE BofA Merrill Lynch U.S. High Yield Option-Adjusted Spread, both tightened 0.17% and 0.22%, respectively, to finish near multi-year lows. However, spreads in the first eight months of 2018 have seen very different paths. Investment grade spreads in 2018 have widened by 0.22%, while high-yield spreads have actually continued to tighten by 0.14%. In 2018, high-yields spreads are experiencing newfound swings of volatility alongside equity markets.

Emerging market (EM) assets have seen substantial volatility over the period. EM equities, as measured by the MSCI Emerging Markets Index, returned 4.32% in local currency terms and -0.68% in U.S. dollar terms over the period. For much of the period

Table of Contents

Market Environment Overview

(unaudited) (concluded)

(particularly from February 2018 onward) broad strength in the U.S. dollar hurt foreign EM currencies. A handful of countries (South Africa, Russia, Argentina, Brazil, and Turkey) experienced even greater negative performance due to political and/or economic shocks. Specifically, we saw the near collapse of two EM currencies in the Turkish lira (-47.20%) and the Argentinean peso (-52.98%) over the period. The Turkish lira fell in part because of a dispute the U.S. and Turkey had over a pastor being detained in Turkey, which resulted in harsh sanctions being placed on Turkey by the U.S. In addition, Turkey has experienced rampant inflation alongside deteriorating economic data. Similarly, Argentina has experienced similar drops in its currency. Hyperinflation is very prevalent in the country, with the central bank's balance sheet becoming bloated with a supply of pesos in excess of what is being demanded. Inability to enact economic reforms, declining wage growth, and requesting an IMF bailout are just a few of the reasons for the large declines. These negative drawdowns in the Turkish lira and Argentinean peso have had a spillover effect with other EM currencies as well.

Many EM countries have economies heavily reliant on the performance of the energy market, making the stabilization of oil prices a major factor. One of the biggest drivers for the positive performance has been the price movement in oil, as the price of crude oil futures have risen from \$47 per barrel at the start of the fiscal period to \$70 per barrel at the end of the fiscal period, reaching a high of \$74 at the end of June 2018. While we have seen large gains in energy prices, we have seen nearly the opposite for precious metals. Gold, silver, platinum, and copper, for example, have seen large drops over the fiscal period. Corn, wheat, and cotton have seen positive gains, while soybeans, coffee, and sugar have seen double digit drops over the period. Much of the agriculture commodity price moves continue to be swayed heavily by decisions in tariffs and trade war tactics with the U.S. and its trading partner countries, with volatility expected to continue.

On the currency front, the U.S. dollar has seen declines from its highs in the fall of 2017 through the first couple months in 2018. From August 31, 2017 through February 28, 2018, this U.S. dollar weakness helped in strengthening the British pound (+6.42%), the Japanese yen (+3.09%), and the Euro (+2.38%). However, from February 2018 through the end of the period, the U.S. dollar has strengthened considerably, with most developed markets and EM currencies experiencing negative returns. Currencies of heavy commodity exporters such as the Norwegian krone and Canadian dollar have ended the fiscal year negative. Yields in emerging market bonds (both sovereign and corporates) rose during the period, resulting in negative performance. Also, locally-denominated EM sovereign debt returns were negative during the period, resulting from rising local bond yields, and depreciating EM currencies.

Table of Contents

Information about Performance and Shareholder Expense Examples (unaudited)

Performance

The performance tables on the following pages are provided for comparative purposes and represent the period noted. Each Fund's per share NAV is the value of one share of the Fund and is calculated by dividing the value of total assets less total liabilities by the number of shares outstanding. The NAV return is based on the NAV of the Fund and the market price return is based on the market price per share of the Fund. The price used to calculate market price returns is the midpoint of the bid and ask price for Fund shares as of the close of trading on the exchange where Fund shares are listed. NAV and market price returns assume that dividends and capital gain distributions have been reinvested in the Fund at NAV and market price, respectively. As with other ETFs, NAV returns and market price returns may differ because of factors such as the supply and demand for Fund shares and investors' assessments of the underlying value of a Fund's portfolio securities.

Fund shares are bought and sold at market price (not NAV) and are not individually redeemed from a Fund. Fund NAV returns are calculated using a Fund's daily 4:00 p.m. eastern time NAV. Market price returns reflect the midpoint of the bid and ask price as of the close of trading on the exchange where Fund shares are listed. Market price returns do not represent the returns you would receive if you traded shares at other times. The returns do not reflect the deduction of taxes that a shareholder would pay on Fund distributions or on the redemption of Fund shares. Total returns for a period of less than one year are cumulative.

Performance is historical and does not guarantee future results. Current performance may be lower or higher than quoted. Investment returns and the principal value of an investment will fluctuate so that an investor's shares, when redeemed, may be worth more or less than their original cost.

An index is a statistical measure of a specified financial market or sector. An index does not actually hold a portfolio of securities, incur expenses or pay any transaction costs. Therefore, index returns do not reflect deductions for fees or expenses and an index is not available for direct investment. In comparison, the Funds' performance is negatively impacted by these deductions. Fund returns do not reflect brokerage commissions or taxes on transactions in Fund shares or taxes that a shareholder would pay on Fund distributions. Past performance is no guarantee of future results. For the most recent month-end performance information visit www.wisdomtree.com.

Shareholder Expense Examples

Each Fund's performance table is accompanied by a shareholder expense example. As a shareholder of a WisdomTree Fund, you incur two types of cost: (1) transaction costs, including brokerage commissions on purchases and sales of your Fund shares and (2) ongoing costs, including management fees and other Fund expenses. The examples are intended to help you understand your ongoing costs (in dollars and cents) of investing in a Fund and to compare these costs with the ongoing costs of investing in other funds.

The examples are based on an investment of \$1,000 invested at the beginning of the period and held for the entire period from March 1, 2018 to August 31, 2018. Except where noted, expenses are calculated using each Fund's annualized expense ratio (after the effect of contractual or voluntary fee waivers, if any), multiplied by the average account value for the period, multiplied by 184/365 (to reflect the one-half year period). The annualized expense ratio does not include acquired fund fees and expenses (AFFEs), which are fees and expenses incurred indirectly by a Fund through its investments in certain underlying investment companies.

Actual expenses

The first line in the shareholder expense example table shown on the following pages provides information about actual account values and actual expenses. You may use the information in this line, together with the amount you invested, to estimate the expenses that you paid over the period. Simply divide your account value by \$1,000 (for example, an \$8,600 account value divided by \$1,000 = 8.6), then multiply the result by the number in the first line for your Fund under the heading entitled "Expenses Paid During the Period" to estimate the expenses you paid on your account during the period.

Hypothetical example for comparison purposes

The second line in the shareholder expense example table shown on the following pages provides information about hypothetical account values and hypothetical expenses based on the Fund's actual expense ratio and an assumed rate of return of 5% per year before expenses, which is not the Fund's actual return. The hypothetical account values and expenses may not be used to estimate the actual ending account balance or expenses you paid for the period. You may use this information to compare the ongoing costs of investing in your Fund and other funds. To do so, compare this 5% hypothetical example with the 5% hypothetical examples that appear in the shareholder reports of the other funds.

Edgar Filing: WisdomTree Trust - Form N-CSR

Please note that the expenses shown in the table are meant to highlight your ongoing costs only and do not reflect any transactional costs, such as brokerage commissions paid on purchases and sales of Fund shares. Therefore, the second line in the table is useful in comparing ongoing Fund costs only and will not help you determine the relative total costs of owning different funds. In addition, if these transactional costs were included, your costs would have been higher.

Description	% of Net Assets
U.S. Treasury Bill, 1.92%, 10/4/18	48.0%
U.S. Treasury Bill, 1.98%, 10/18/18	46.2%
WisdomTree Floating Rate Treasury Fund (USFR)	4.4%

*The holdings are subject to change, and there are no guarantees the Fund will remain invested in any particular security. Excludes derivatives and investment of cash collateral for securities on loan (if any). For a full list of holdings information for the underlying WisdomTree fund, please see page 45 of this report. The WisdomTree Bloomberg U.S. Dollar Bullish Fund (the "Fund") seeks to provide total returns, before fees and expenses, that exceed the performance of the Bloomberg Dollar Total Return Index (the "Index"). The Fund seeks to achieve its investment objective by investing in short-term securities and instruments designed to potentially benefit as the U.S. dollar appreciates in value relative to a basket of global currencies. Although the Fund invests in short-term, investment grade instruments, the Fund is not a money market fund and it is not the objective of the Fund to maintain a constant share price.

The Fund returned 4.25% at net asset value (NAV) for the fiscal year ending August 31, 2018 (for more complete performance information please see the performance table below). During the fiscal year, the U.S. dollar has strengthened against most developed and emerging currencies, with much of the broad resurgence coming from April 2018 onward. The two largest exposures in the Fund, the Euro and the Japanese yen, ended relatively flat over the fiscal period. Most notably, the Fund's short currency exposure to the Australian dollar contributed positively to performance while its short currency exposure to the Swiss franc contributed negatively to performance.

Shareholder Expense Example

Beginning Account Value	Ending Account Value	Annualized Expense Ratio	Expenses Paid During the Period

Citigroup, Inc., tri-party repurchase agreement, 1.97%, 9/4/18	31.5%
WisdomTree Floating Rate Treasury Fund (USFR)	4.2%

*The holdings are subject to change, and there are no guarantees the Fund will remain invested in any particular security. Excludes derivatives and investment of cash collateral for securities on loan (if any). For a full list of holdings information for the underlying WisdomTree fund, please see page 45 of this report.

Fully collateralized by U.S. Government and U.S. Government agency securities.

The WisdomTree Brazilian Real Strategy Fund (the "Fund") seeks to achieve total returns reflective of both money market rates in Brazil available to foreign investors and changes in value of the Brazilian real (BRL) relative to the U.S. dollar. The Fund seeks to achieve its investment objective by investing in short-term securities and instruments designed to provide exposure to Brazilian currency and money market rates. The Brazilian real is a developing market currency, which can experience periods of significant volatility. Although the Fund invests in short-term, investment grade instruments, the Fund is not a money market fund and it is not the objective of the Fund to maintain a constant share price.

The Fund returned -19.76% at net asset value (NAV) for the fiscal year ending August 31, 2018 (for more complete performance information please see the performance table below). Emerging Market currencies broadly, specifically the BRL, have performed poorly over the fiscal year, due to a resurgence in the U.S. dollar. Much of the headwinds that Brazil has been experiencing is due to the culmination of various factors, such as upcoming local elections in October 2018, fluctuating commodity prices, and declining economic fundamentals. Further, poor performance in other Emerging Market currencies, especially in Turkey, Argentina, and South Africa, has carried over and negatively impacted the BRL. Additionally, there may be continued volatility in the BRL in the foreseeable future, as the market lacks clarity that an investor friendly candidate will win the upcoming Brazilian presidential election.

Shareholder Expense Example

Top Holdings*

Description	% of Net Assets
U.S. Treasury Bill, 1.98%, 10/18/18	35.8%
U.S. Treasury Bill, 1.92%, 10/4/18	31.8%
Citigroup, Inc., tri-party repurchase agreement, 1.97%, 9/4/18	29.9%
WisdomTree Floating Rate Treasury Fund (USFR)	3.7%

*The holdings are subject to change, and there are no guarantees the Fund will remain invested in any particular security. Excludes derivatives and investment of cash collateral for securities on loan (if any). For a full list of holdings information for the underlying WisdomTree fund, please see page 45 of this report.

Fully collateralized by U.S. Government and U.S. Government agency securities.

The WisdomTree Chinese Yuan Strategy Fund (the "Fund") seeks to achieve total returns reflective of both money market rates in China available to foreign investors and changes in value of the Chinese yuan relative to the U.S. dollar. The Fund seeks to achieve its investment objective by investing in short-term securities and instruments designed to provide exposure to Chinese currency and money market rates. The Chinese yuan is a developing market currency, which can experience periods of significant volatility. Although the Fund invests in short-term, investment grade instruments, the Fund is not a "money market" fund and it is not the objective of the Fund to maintain a constant share price.

The Fund returned -0.20% at net asset value ("NAV") for the fiscal year ending August 31, 2018 (for more complete performance information please see the performance table below). Although, over the fiscal period local currencies have remained fairly range bound, there have been more headwinds of late, in the form of a strengthening U.S. dollar. The Chinese yuan has been under pressure due to a gradually slowing economy, and more importantly, rising trade tensions with the U.S. Increased tariffs from the U.S. continue to weigh on the Chinese yuan. However, officials from both countries continue to restart trade talks in hopes to strike a deal and prevent any further escalation in the trade war.

Top Holdings*

Description	% of Net Assets
U.S. Treasury Bill, 1.98%, 10/18/18	33.2%
Citigroup, Inc., tri-party repurchase agreement, 1.97%, 9/4/18	31.9%
U.S. Treasury Bill, 1.92%, 10/4/18	30.1%
WisdomTree Floating Rate Treasury Fund (USFR)	4.1%

*The holdings are subject to change, and there are no guarantees the Fund will remain invested in any particular security. Excludes derivatives and investment of cash collateral for securities on loan (if any). For a full list of holdings information for the underlying WisdomTree fund, please see page 45 of this report.

Fully collateralized by U.S. Government and U.S. Government agency securities.

The WisdomTree Emerging Currency Strategy Fund (the "Fund") seeks to achieve total returns reflective of both money market rates in selected emerging market ("EM") countries available to foreign investors and changes to the value of these currencies relative to the U.S. dollar. The Fund seeks to achieve its investment objective by investing in short-term securities and instruments designed to provide exposure to the currencies and money market rates of selected EM countries. EM currencies can experience periods of significant volatility. Although the Fund invests in short-term, investment grade instruments, the Fund is not a "money market" fund and it is not the objective of the Fund to maintain a constant share price.

The Fund returned -6.11% at net asset value ("NAV") for the fiscal year ending August 31, 2018 (for more complete performance information please see the performance table below). EM currencies broadly have performed poorly over the fiscal year due to a recent resurgence in the U.S. dollar. Much of the negative market sentiment is a direct result of various factors; such as fluctuating commodity prices, declining economic fundamentals, slowing global growth, trade wars/tariffs, and a spillover effect from poor foreign currency performance in Turkey, Argentina, and South Africa. In the face of broad EM headwinds, the Fund's currency exposure to Malaysia contributed positively to performance, while its currency exposure to Turkey contributed negatively to performance.

*The ten largest holdings are subject to change, and there are no guarantees the Fund will remain invested in any particular security. Excludes derivatives and investment of cash collateral for securities on loan (if any).

Fully collateralized by U.S. Government securities.

The WisdomTree Asia Local Debt Fund (the "Fund") seeks a high level of total return consisting of both income and capital appreciation. The Fund attempts to achieve its objective through investments in fixed income instruments denominated in the currencies of a broad range of Asian countries.

The Fund returned -3.56% at net asset value (NAV) for the fiscal year ending August 31, 2018 (for more complete performance information please see the performance table below). Emerging market currencies broadly have performed poorly over the fiscal year, due to a resurgence in the U.S. dollar. Much of the reason for the headwinds in broad emerging markets have been less as a result of Asian currencies and economies, and more so due to other emerging market countries and currencies. Still, emerging market currencies have generally experienced poor performance, particularly from spillover effects from depreciating currencies in Turkey, Argentina, and South Africa. Much of the pressures from the exposures in the Fund were derived from more geopolitical and regional risk, and rising interest rates. Trade tensions between the U.S. and China have put pressure on various local currencies, particularly the Chinese yuan. The Fund's position in Malaysian local bonds contributed positively to performance, while its position in Australian local bonds contributed negatively to performance.

*The ten largest holdings are subject to change, and there are no guarantees the Fund will remain invested in any particular company. Excludes derivatives and investment of cash collateral for securities on loan (if any).

The WisdomTree Emerging Markets Corporate Bond Fund (the Fund) seeks a high level of total return consisting of both income and capital appreciation. The Fund attempts to achieve its objective through investments in debt securities issued by corporate entities that are domiciled in, or economically tied to, emerging market countries.

The Fund returned -2.08% at net asset value (NAV) for the fiscal year ending August 31, 2018 (for more complete performance information please see the performance table below). Security selection was the main positive driver of performance for the Fund. Within the Emerging Market fixed income asset classes, U.S. dollar-denominated corporate bonds outperformed their local currency debt counterparts. Currency crises in Turkey, Brazil, and elsewhere had spillover effects to other emerging local markets. Emerging Market corporate bonds issued in U.S. dollars were able to avoid much of this impact. Top contributors to Fund performance included the overweights to Russian Oil & Gas and Banking industry issuers, Kazakhstan Oil & Gas industry issuers, and Peruvian Metals & Mining industry issuers, as well as an underweight to Chinese issuers across various sectors. The main detractors to Fund performance included overweights to Turkish issuers, although strong security selection within Turkish banks helped reduce the detraction. Other detractors from performance included an Indian Mining industry issuer, a Colombian Communications industry issuer, and a broad underweight to the Middle East.

*The ten largest holdings are subject to change, and there are no guarantees the Fund will remain invested in any particular security. Excludes derivatives and investment of cash collateral for securities on loan (if any).

Fully collateralized by U.S. Government securities.

The WisdomTree Emerging Markets Local Debt Fund (the Fund) seeks a high level of total return consisting of both income and capital appreciation. The Fund attempts to achieve its objective through investments in fixed income instruments denominated in the local currencies of emerging market countries.

The Fund returned -11.66% at net asset value (NAV) for the fiscal year ending August 31, 2018 (for more complete performance information please see the performance table below). Emerging Market currencies broadly have performed poorly over the fiscal year, due to a resurgence in the U.S. dollar. Much of the negative market sentiment is a direct result of various factors; such as fluctuating commodity prices, declining economic fundamentals, slowing global growth, and trade wars/tariffs. The currencies of Turkey, Argentina, and South Africa had significant collapses over the fiscal year, which had a spillover effect to other Emerging Market currencies. In addition, rising interest rates in these regions have had a negative impact on bond prices, resulting in negative performance. The Fund's position in South African local bonds contributed positively to performance, while its position in Turkish local bonds contributed negatively to performance.

Description	% of Net Assets
U.S. Treasury Floating Rate Notes, 2.12%, 4/30/20	28.8%
U.S. Treasury Floating Rate Notes, 2.09%, 1/31/20	26.5%
U.S. Treasury Floating Rate Notes, 2.14%, 10/31/19	24.1%
U.S. Treasury Floating Rate Notes, 2.13%, 7/31/20	20.4%

*The holdings are subject to change, and there are no guarantees the Fund will remain invested in any particular security. Excludes derivatives and investment of cash collateral for securities on loan (if any).

The WisdomTree Floating Rate Treasury Fund (the "Fund") seeks to track the price and yield performance, before fees and expenses, of the Bloomberg U.S. Treasury Floating Rate Bond Index (the "Index"). In seeking to track the Index, the Fund invests in floating rate public obligations of the U.S. Treasury. The Fund generally uses a representative sampling strategy to achieve its investment objective, meaning it generally will invest in a sample of the securities in the Index whose risk, return and other characteristics resemble the risk, return and other characteristics of the Index as a whole.

The Fund returned 1.53% at net asset value (NAV) for the fiscal year ending August 31, 2018 (for more complete performance information please see the performance table below). The floating rate nature of the securities used to effectuate the Fund's investment strategy has allowed the Fund to benefit from rising short-term U.S. rates, and be protected from gradual rate hikes by the U.S. Federal Reserve (the "Fed"). Over the fiscal year, the Fed raised rates three times, and is expected to hike rates two more times in the second half of 2018. For the fiscal year ended August 31, 2018, the 10-year U.S. Treasury yield increased from 2.12% to 2.86%, the 5-year U.S. Treasury yield increased from 1.70% to 2.74%, the 2-year U.S. Treasury yield increased from 1.33% to 2.63%, and the 3-month U.S. Treasury yield increased from 0.99% to 2.09%.

The WisdomTree Interest Rate Hedged High Yield Bond Fund (the "Fund") seeks to track the price and yield performance, before fees and expenses, of the ICE BofA Merrill Lynch 0-5 Year U.S. High Yield Constrained, Zero Duration Index (the "Index"). In seeking to track the Index, the Fund invests mainly in short-term non-investment grade U.S. corporate fixed income securities having effective maturities generally shorter than five years and obtains short exposure to U.S. Treasuries such that the Fund's total portfolio duration approximates zero years. The Fund

Edgar Filing: WisdomTree Trust - Form N-CSR

generally uses a representative sampling strategy to achieve its investment objective, meaning it generally will invest in a sample of the securities in the Index whose risk, return and other characteristics resemble the risk, return and other characteristics of the Index as a whole.

The Fund returned 5.68% at net asset value (NAV) for the fiscal year ending August 31, 2018 (for more complete performance information please see the performance table below). As interest rates rose over the period, the Fund benefited from the short futures contract hedging out the Fund's duration to zero. The Fund benefited from its exposure to credit bonds, and not investing in U.S. Treasury bonds over the period. High yield bonds tend to be less interest rate sensitive than other credit or treasury bonds, thus helping to contribute to overall performance in a rising rate environment. The Fund's positions in energy corporations contributed positively to performance while bond issuer defaults contributed negatively to performance. During the fiscal year, the Fund invested in derivatives, specifically short futures contracts on U.S. Treasury bonds, to hedge against a rise in interest rates. At August 31, 2018, yields on 5-year, 10-year, and 30-year U.S. Treasury bonds all ended the period higher than where they began a year ago. As a result of the overall increase in U.S. Treasury yields, the Fund's use of derivatives contributed positively to overall Fund performance during the fiscal year ended August 31, 2018.

* The ten largest holdings are subject to change, and there are no guarantees the Fund will remain invested in any particular company. Excludes derivatives and investment of cash collateral for securities on loan (if any).

The WisdomTree Negative Duration High Yield Bond Fund (the "Fund") seeks to track the price and yield performance, before fees and expenses, of the ICE BofA Merrill Lynch 0-5 Year U.S. High Yield Constrained, Negative Seven Duration Index (the "Index"). In seeking to track the Index, the Fund invests mainly in short-term non-investment grade U.S. corporate fixed income securities having effective maturities generally shorter than five years and obtains short exposure to U.S. Treasuries such that the Fund's total portfolio duration approximates negative seven years. The

Edgar Filing: WisdomTree Trust - Form N-CSR

Fund generally uses a representative sampling strategy to achieve its investment objective, meaning it generally will invest in a sample of the securities in the Index whose risk, return and other characteristics resemble the risk, return and other characteristics of the Index as a whole.

The Fund returned 8.72% at net asset value (NAV) for the fiscal year ending August 31, 2018 (for more complete performance information please see the performance table below). As interest rates rose over the period, the Fund benefited from the short futures contract hedging out the Fund's duration to negative seven years. High yield bonds tend to be less interest rate sensitive than other credit or treasury bonds, thus helping to dampen the negative impact from a rising rate environment. In addition, the Fund's negative duration positioning contributed even more so to positive performance. The Fund's exposures in energy credits contributed positively to performance while bond issuer defaults contributed negatively to performance. During the fiscal year, the Fund invested in derivatives, specifically short futures contracts on U.S. Treasury bonds, to hedge against a rise in interest rates. At August 31, 2018, yields on 5-year, 10-year, and 30-year U.S. Treasury bonds all ended the period higher than where they began a year ago. As a result of the overall increase in U.S. Treasury yields, the Fund's use of derivatives contributed positively to overall Fund performance during the fiscal year ended August 31, 2018.

Edgar Filing: WisdomTree Trust - Form N-CSR

The ten largest holdings are subject to change, and there are no guarantees the Fund will remain invested in any particular security. Excludes derivatives and investment of cash collateral for securities on loan (if any).

The WisdomTree Yield Enhanced U.S. Aggregate Bond Fund (the Fund) seeks to track the price and yield performance, before fees and expenses, of the Bloomberg Barclays U.S. Aggregate Enhanced Yield Index (the Index). In seeking to track the Index, the Fund invests mainly in U.S. investment grade fixed income securities. The Fund generally uses a representative sampling strategy to achieve its investment objective, meaning it generally will invest in a sample of the securities in the Index whose risk, return and other characteristics resemble the risk, return and other characteristics of the Index as a whole.

The Fund returned -1.44% at net asset value (NAV) for the fiscal year ending August 31, 2018 (for more complete performance information please see the performance table below). Rising rates over the period negatively affected Fund performance. Investment grade spreads tightened from September 2017 through February 2018, but then expanded until the end of the current fiscal period, remaining relatively unchanged over the entire fiscal period. The Fund's overweight to investment grade credit securities and underweight to U.S. Treasury securities selections contributed positively to performance. From a sector perspective, the Fund's overweight to energy corporates contributed positively to Fund performance as energy prices in oil rose over the fiscal period. However, the Fund's overweight to financials contributed negatively to performance. The Fund's position in short-term corporates contributed positively to performance while its position in long end governments contributed negatively to performance. In addition, the Fund benefited from its overweight to Baa-rated bonds (rating levels from Aaa through Baa ranked highest to lowest constitute the investment grade portion of the credit spectrum) as spreads tightened throughout the bottom tier of the investment grade spectrum.

*The ten largest holdings are subject to change, and there are no guarantees the Fund will remain invested in any particular company. Excludes derivatives and investment of cash collateral for securities on loan (if any).

The WisdomTree Yield Enhanced U.S. Short-Term Aggregate Bond Fund (the Fund) seeks to track the price and yield performance, before fees and expenses, of the Bloomberg Barclays U.S. Short Aggregate Enhanced Yield Index (the Index). In seeking to track the Index, the Fund invests mainly in short-term U.S. investment grade fixed income securities having effective maturities generally shorter than five years. The Fund generally uses a representative sampling strategy to achieve its investment objective, meaning it generally will invest in a sample of the securities in the Index whose risk, return and other characteristics resemble the risk, return and other characteristics of the Index as a whole.

The Fund returned -0.47% at net asset value (NAV) for the fiscal year ending August 31, 2018 (for more complete performance information please see the performance table below). The Fund's overweight to investment grade credit securities, along with an underweight to U.S. Treasury securities selections, contributed positively to performance. Security selection was mixed with a slight drag on performance as commercial mortgage backed securities were a small drag on returns offset by the Fund's holdings in investment grade credit. Within investment grade credit, the Fund's holdings of high quality consumer non-cyclical sector was the main detractor. As interest rates rose over the fiscal year, the Fund benefited from being short-term in nature, by only investing in bonds that mature within 1-5 years. In addition, the Fund benefited from its overweight to Baa-rated bonds (rating levels from Aaa through Baa ranked highest to lowest constitute the investment grade portion of the credit spectrum) as spreads tightened throughout the bottom tier of the investment grade spectrum.

WisdomTree CBOE Russell 2000 PutWrite Strategy Fund (RPUT)**Investment Breakdown**

Investment Type	% of Net Assets
U.S. Government Obligations	75.7%
Other Assets less Liabilities	24.3%
Total	100.0%

The Fund's investment breakdown may change over time. It does not include derivatives (if any).

Other assets includes investment of cash collateral for securities on loan (if any).

Top Holdings*

Description	% of Net Assets
U.S. Treasury Bill, 1.93%, 9/20/18	75.7%

*The holdings are subject to change, and there are no guarantees the Fund will remain invested in any particular security. Excludes derivatives and investment of cash collateral for securities on loan (if any).

The WisdomTree CBOE Russell 2000 PutWrite Strategy Fund (the "Fund") seeks to track the price and yield performance, before fees and expenses, of the CBOE Russell 2000 PutWrite Index (the "Index"), a collateralized put write strategy on the Russell 2000 Index. The strategy is designed to receive a premium from the option buyer by selling (i.e. writing) a sequence of one-month, at-the-money, Russell 2000 Index put options.

The Fund returned 5.94% at net asset value (NAV) from February 1, 2018 (commencement of operations) through the end of the fiscal period on August 31, 2018. In 2017, the U.S. equity markets saw fairly consistent and low levels of volatility. However, in the first quarter of 2018, the markets saw a strong resurgence in market volatility, as the Chicago Board of Options Exchange Volatility Index, a measure of the market's expectation for forward volatility, spiked by as much as 124% in a single trading day on February 5, 2018. In the 26 negative trading days for the Russell 2000 Index during the first quarter, the Russell 2000 PutWrite Strategy outperformed the Russell 2000 Index on every single negative day, providing on average delivered downside protection of approximately 0.41% on each down day. Following the spikes in early 2018, volatility subsided and returned to normalized levels for the remainder of the fiscal period through August 31, 2018. Over the entire fiscal period, the Fund's positioning benefited as a result of the continued rise of the Russell 2000 Index, while providing downside protection during the bouts of market volatility.

The WisdomTree Managed Futures Strategy Fund (the "Fund") seeks to provide investors with positive total returns in rising or falling markets that are not directly correlated to broad market equity or fixed income returns. The Fund is managed using a quantitative, rules-based strategy and intends to invest in a combination of diversified futures contracts for commodities, currencies and interest rates.

The Fund returned 4.45% at net asset value (NAV) for the fiscal year ending August 31, 2018 (for more complete performance information please see the performance table below). Over the fiscal year, crude oil commodity prices saw positive gains, as prices went from \$50/barrel to approximately \$70/barrel as a result of OPEC's continued efforts to limit production globally, as well from the U.S.'s decision to start exporting its own supplies. Precious metals, such as gold, silver, platinum, and copper, saw negative performance over the fiscal period, as a sell-off in emerging markets has spilled into these key commodity resources. Agricultural commodity prices have varied, with wheat and cotton having positive performance over the period, and soybeans and coffee having negative performance over the period. Trade tensions between the U.S. and other countries continued to weigh heavily on commodity prices broadly during the fiscal year. Over the first half of the fiscal year, the U.S. dollar weakened relative to broad emerging market and developed market currencies. However, over the remaining six months, the U.S. dollar has strengthened considerably, leading to positive performance over the entire fiscal year. Towards the end of the fiscal year, some emerging market currencies depreciated significantly against the U.S. dollar. During the fiscal year, U.S. interest rates rose, as the 10-year U.S. Treasury yield increased from 2.12% to 2.86%, the 5-year U.S. Treasury yield increased from 1.70% to 2.74%, the 2-year U.S. Treasury yield increased from 1.33% to 2.63%, and the 3-month U.S. Treasury yield increased from 0.99% to 2.09%. Overall, the Fund's exposure to the energy sector contributed positively to performance, while its positioning in grains detracted from performance.

Description of Terms and Indexes (unaudited)

Below are descriptions of certain terms and of each index referenced in this report.

Bloomberg Barclays Rate Hedged U.S. Aggregate Bond Index, Negative Five Duration:

The Bloomberg Barclays Rate Hedged U.S. Aggregate Bond Index, Negative Five Duration combines long positions in the Bloomberg Barclays U.S. Aggregate Bond Index with short positions in U.S. Treasury Bonds to provide a duration exposure of -5 years. Market values of long and short positions are rebalanced at month-end.

Bloomberg Barclays Rate Hedged U.S. Aggregate Bond Index, Zero Duration:

The Bloomberg Barclays Rate Hedged U.S. Aggregate Bond Index, Zero Duration combines long positions in the Bloomberg Barclays U.S. Aggregate Bond Index with short positions in U.S. Treasury Bonds to provide a duration exposure of 0 years. Market values of long and short positions are rebalanced at month-end.

Bloomberg Barclays U.S. Aggregate Enhanced Yield Index:

The Bloomberg Barclays U.S. Aggregate Enhanced Yield Index uses a rules-based approach to reallocate across subcomponents in the Bloomberg Barclays U.S. Aggregate Bond Index seeking to enhance yield while maintaining a similar risk profile.

Bloomberg Barclays U.S. Short Aggregate Enhanced Yield Index:

The Bloomberg Barclays U.S. Short Aggregate Enhanced Yield Index uses a rules-based approach to reallocate across subcomponents in the Bloomberg Barclays U.S. Aggregate Bond Index that generally have effective maturities shorter than 5 years and seeks to enhance yield while maintaining a similar risk profile.

Bloomberg Barclays U.S. Aggregate Index:

The Bloomberg Barclays U.S. Aggregate Index represents the investment-grade, U.S. dollar-denominated, fixed-rate taxable bond market, including Treasuries, government-related and corporate securities, as well as mortgage- and asset-backed securities.

Bloomberg Dollar Spot Index:

The Bloomberg Dollar Spot Index tracks the performance of a basket of 10 leading global currencies versus the U.S. dollar. Each currency in the basket and its weight is determined annually based on its share of international trade and foreign exchange (FX) liquidity.

Bloomberg Dollar Total Return Index:

The Bloomberg Dollar Total Return Index is structured to potentially benefit as the U.S. dollar appreciates relative to a basket of global currencies. The index tracks a long position in the U.S. dollar measured against a basket of developed and emerging market currencies which (i) have the highest liquidity in the currency markets and (ii) represent countries that make the largest contribution to trade flows with the United States. The index also incorporates differences in money market rates between the U.S. and the countries (or regions) represented by the foreign currencies.

Bloomberg U.S. Treasury Floating Rate Bond Index:

The Bloomberg U.S. Treasury Floating Rate Bond Index is a rules-based, market-value weighted index engineered to measure the performance and characteristics of floating rate coupon U.S. Treasuries which have a maturity greater than 12 months.

Table of Contents

Description of Terms and Indexes (unaudited) (continued)

CBOE® Russell 2000 PutWrite Index:

The CBOE® Russell 2000 PutWrite Index tracks the value of a cash-secured (i.e. collateralized) put option sales strategy, which consists of selling (or writing) Russell 2000 Index put options and investing the sale proceeds in one-month Treasury bills.

CBOE® S&P 500 PutWrite Index:

The CBOE® S&P 500 PutWrite Index tracks the value of a cash-secured (i.e. collateralized) put option sales strategy, which consists of selling (or writing) S&P 500 Index put options and investing the sale proceeds in one- and three-month Treasury bills.

Diversified Trends Indicator Index:

The Diversified Trends Indicator (DTI) Index is a long/short rules-based index that consists of ten commodity sectors and eight financial sectors. Each month the DTI Index sector exposure is rebalanced back to the fixed weights, 50% physical commodities and 50% financials (when energy is long) and approximately 40% commodities and 60% financials (when energy is flat). Each sector (other than the energy sector) is positioned either long or short depending on the current market environment (the energy sector is positioned as either long or flat (i.e., no exposure)). The DTI Index individual market components, sectors and related weightings, as well as other aspects of the calculation of the DTI Index, are subject to change at any time.

Equal-Weighted Emerging Currency Composite:

A composite incorporating equal-weighted exposure to the currencies within the Emerging Currency Strategy Fund was constructed as an additional gauge of Emerging Currency Strategy Fund performance. The composite tracks the returns for the currencies using the total returns of the country subindices of the JP Morgan Emerging Local Markets Index Plus (ELMI+). Each subindex uses a weighted basket of one-month, two-month and three-month currency forwards (deliverable or nondeliverable) collateralized with U.S. money market rates to proxy the total returns of an investment in local-currency money market instruments. Currency exposures are rebalanced back to equal-weighting at the end of the month in which the Emerging Currency Strategy Fund intends to rebalance, and currency changes are reflected in the composite at the end of the month they are reflected in the Fund.

Forward Currency Contracts:

A forward currency contract is an agreement to buy or sell a specific currency at a future date at a price set at the time of the contract. A forward contract may either be deliverable or non-deliverable. A **deliverable forward currency contract** is an agreement by two parties to transact in currencies at a specific rate on a future date upon which each party delivers the promised currency. A **non-deliverable forward (NDF) currency contract** is an agreement by two parties to transact in currencies at a specific rate on a future date and then cash settle the agreement with a simple exchange of the market value difference between the current market rate and the initial agreed-upon rate.

ICE BofA Merrill Lynch 0-5 Year U.S. High Yield Constrained, Negative Seven Duration Index:

The ICE BofA Merrill Lynch 0-5 Year U.S. High Yield Constrained, Negative Seven Duration Index tracks the performance of the combination of a long position in short maturity U.S. high yield bonds and a short position in on-the-run U.S. Treasuries where the net interest rate exposure of the index is adjusted to a negative seven year duration. Market values of long and short positions are rebalanced at month-end.

Table of Contents

Description of Terms and Indexes (unaudited) (continued)

ICE BofA Merrill Lynch 0-5 Year U.S. High Yield Constrained, Zero Duration Index:

The ICE BofA Merrill Lynch 0-5 Year U.S. High Yield Constrained, Zero Duration Index tracks the performance of the combination of a long position in short maturity U.S. high yield bonds and a short position in on-the-run U.S. Treasuries where the net interest rate exposure of the index is adjusted to a zero year duration. Market values of long and short positions are rebalanced at month-end.

JP Morgan Corporate Emerging Markets Bond Index (CEMBI) Broad:

The JP Morgan Corporate Emerging Markets Bond Index (CEMBI) Broad is a market capitalization-weighted index consisting of U.S. dollar-denominated emerging market corporate bonds. The index serves as a global corporate benchmark representing Asia, Latin America, Europe and Middle East/Africa. U.S. dollar-denominated corporate issues from index-eligible countries are narrowed further by only including issues with more than \$300 million current face outstanding and at least five years to maturity (at the time of inclusion into the index).

JP Morgan Emerging Local Markets Index Plus (ELMI+):

The JP Morgan Emerging Local Markets Index Plus (ELMI+) and its underlying country and regional subindices track the total returns for local-currency denominated money market instruments in emerging market countries.

JP Morgan Emerging Local Markets Index Plus (ELMI+) Brazil:

The Brazil subindex uses a weighted basket of one-month, two-month and three-month currency forwards collateralized with U.S. money market rates to proxy the total returns of an investment in Brazilian real money market instruments. The returns are reported in U.S. dollar terms.

JP Morgan Emerging Local Markets Index Plus (ELMI+) China:

The China subindex uses a weighted basket of one-month, two-month and three-month currency forwards collateralized with U.S. money market rates to proxy the total returns of an investment in Chinese yuan money market instruments. The returns are reported in U.S. dollar terms.

JP Morgan Government Bond Index-Emerging Markets (GBI-EM) Global Diversified Index:

The JP Morgan Government Bond Index-Emerging Markets (GBI-EM) Global Diversified Index tracks the performance of local currency debt issued by emerging market governments, whose debt is accessible by most of the international investor base. The index incorporates a constrained market capitalization methodology in which individual issuer exposures are capped at 10% (with the excess distributed to smaller issuers) for greater diversification among issuing governments. The returns are reported in U.S. dollar terms.

Markit iBoxx Asian Local Bond Index:

The Markit iBoxx Asian Local Bond Index (ALBI) tracks the total return performance of a bond portfolio which consists of local currency denominated, high quality and liquid bonds in Asia ex-Japan. The ALBI includes bonds from the following countries: South Korea, Hong Kong, India, Singapore, Taiwan, Malaysia, Thailand, the Philippines, Indonesia and China.

Table of Contents

Description of Terms and Indexes (unaudited) (continued)

S&P 500® Index:

The S&P 500® Index is a capitalization-weighted index of 500 stocks selected by Standard & Poor's Index Committee, designed to represent the performance of the leading industries in the United States economy.

S&P Diversified Trends Indicator Index:

The S&P Diversified Trends Indicator Index is a diversified composite of global commodity and financial futures that are highly liquid.

Spot Rate and NDF Rate Returns:

A spot rate is the foreign exchange rate on foreign exchange contracts settled generally within two business days from the trade date. The NDF rate is the foreign exchange rate on non-deliverable forward currency contracts settled on a future date that is generally greater than two business days from the trade date. The **Brazilian real** spot return rate relative to the U.S. dollar calculated by WisdomTree is the rate of return percentage difference between the end of period spot and the beginning of period spot rate using WM/Reuters London closing rates. The **Chinese yuan** NDF return rate relative to the U.S. dollar calculated by WisdomTree is the rate of return percentage difference between the end of period NDF rate and the beginning of period NDF rate using WM/Reuters Singapore closing rates.

WisdomTree Managed Futures Index:

The WisdomTree Managed Futures Index is a long/short, rules-based index designed to provide exposure to a portfolio consisting of diversified futures contracts for commodities, currencies and interest rates. On a monthly basis, assets with lower realized volatility will be selected, and a determination to go long or short the futures contracts of the selected assets under a proprietary composite momentum framework will be made. The composite momentum framework incorporates multiple momentum signals to decide the direction and weight in the index.
