Yes No

Tupi well test re-started

Rio de Janeiro, September 8 2009 PETRÓLEO BRASILEIRO S/A PETROBRAS, announces oil and natural gas production has been resumed for the Extended Well Test (EWT) for the Tupi Area, in the Santos Basin's Pre-Salt Pole, on September 5.

Well 3-RJS-646 was closed in early July 2009 for the replacement of the Wet Christmas Tree (a submarine well flow control device) and went back into normal production. The device was replaced successfully in less than two months, in full compliance with the Company's strict health, safety and environmental policies (HSE). The return was much faster than the initial estimates of up to 4 months.

With the resumption of the EWT, the Company will continue collecting important data in order to get to know the long-term behavior of the reservoirs that are in production, to learn how fluid will move and drain during production, and it will gather information about submarine outflow, fundamental knowledge to prepare the development plan for the Santos Basin's Pre-Salt Pole area.

The Tupi area is operated by Petrobras (65%) in partnership with BG Group (25%) and Galp Energia (10%).

FORWARD-LOOKING STATEMENTS

This press release may contain forward-looking statements. These statements are statements that are not historical facts, and are based on management's current view and estimates of future economic circumstances, industry conditions, company performance and financial results. The words "anticipates", "believes", "estimates", "expects", "plans" and similar expressions, as they relate to the company, are intended to identify forward-looking statements. Statements regarding the declaration or payment of dividends, the implementation of principal operating and financing strategies and capital expenditure plans, the direction of future operations and the factors or trends affecting financial condition, liquidity or results of operations are examples of forward-looking statements. Such statements reflect the current views of management and are subject to a number of risks and uncertainties. There is no guarantee that the expected events, trends or results will actually occur. The statements are based on many assumptions and factors, including general economic and market conditions, industry conditions, and operating factors. Any changes in such assumptions or factors could cause actual results to differ materially from current expectations.
