KONA GRILL, INC.
NOTES TO UNAUDITED CONSOLIDATED FINANCIAL STATEMENTS

1. Basis of Presentation and Significant Accounting Policies

Kona Grill, Inc. (referred to herein as the Company or we, us, and our) owns and operates upscale casual dining restaurants under the name Kona Grill. Our restaurants feature a diverse selection of mainstream American dishes and award-winning sushi that are prepared fresh daily. We currently own and operate 16 restaurants in 10 states throughout the United States.

The accompanying unaudited consolidated financial statements have been prepared in accordance with U.S. generally accepted accounting principles for interim financial information and with the rules and regulations of the Securities and Exchange Commission (SEC). Accordingly, they do not include all of the information and footnotes required by U.S. generally accepted accounting principles for complete financial statements. In our opinion, all adjustments (consisting of normal recurring accruals) considered necessary for a fair presentation have been included. Operating results for the three and six month periods ended June 30, 2007 are not necessarily indicative of the results that may be expected for the year ending December 31, 2007.

The consolidated balance sheet at December 31, 2006 has been derived from the audited consolidated financial statements at that date, but does not include all of the information and footnotes required by U.S. generally accepted accounting principles for complete financial statements. Accordingly, these financial statements should be read in conjunction with our Annual Report on Form 10-K for the year ended December 31, 2006.

Cash and Cash Equivalents

Cash and cash equivalents consist of cash, money market funds, and highly liquid short-term fixed income securities with a remaining maturity of 90 days or less when acquired. Amounts receivable from credit card processors are also considered cash equivalents because they are both short-term and highly liquid in nature and are typically converted to cash within one business day of the sales transaction. Under the Company s asset classification practices, when there is no legal right of offset against cash balances in a specific financial institution, uncleared checks are classified as accounts payable. Uncleared checks totaling approximately $860,000 and $640,000 were included in accounts payable as of June 30, 2007 and December 31, 2006, respectively.

Recent Accounting Pronouncements

In July 2006, the Financial Accounting Standards Board (FASB) issued FASB Interpretation No. 48, *Accounting for Uncertainty in Income Taxes* (FIN 48). FIN 48 is an interpretation of FASB Statement No. 109, *Accounting for Income Taxes*, and it seeks to reduce the diversity in practice associated with certain aspects of measurement and recognition in accounting for income taxes. FIN 48 requires that the impact of a tax position in a company s financial statements be recognized if that position will more likely than not be sustained on audit, based on the technical merits of the position. We adopted FIN 48 effective January 1, 2007. See Note 7 for discussion of the adoption of FIN 48.

In September 2006, the FASB issued Statement of Financial Accounting Standards (SFAS) No. 157, *Fair Value Measurements* (SFAS 157). SFAS 157 provides guidance for using fair value to measure assets and liabilities. The standard expands required disclosures about the extent to which companies measure assets and liabilities at fair value, the information used to measure fair value, and the effect of fair value measurements on earnings. SFAS 157 is effective for fiscal years beginning after November 15, 2007. We do not believe the adoption of SFAS 157 will have a material impact on our consolidated financial statements.

KONA GRILL, INC.
NOTES TO UNAUDITED CONSOLIDATED FINANCIAL STATEMENTS

2. Net Income (Loss) Per Share

Basic net income (loss) is computed by dividing net income (loss) by the weighted average number of common shares outstanding during the period. Diluted net income per share includes the dilutive effect of potential stock option and warrant exercises, calculated using the treasury stock method.

	Three Months Ended June 30,		Six Months Ended June 30,	
	2007	2006	2007	2006
	(In thousands, except per share data)			
Numerator:				
Net income (loss)	$ 313	$ (303)	$ (230)	$ (1,191)
Denominator:				
Weighted average shares Basic	5,866	5,793	5,860	5,762
Effect of dilutive stock options and warrants	367			
Weighted average shares Diluted	6,233	5,793	5,860	5,762
Net income (loss) per share:				
Basic	$ 0.05	$ (0.05)	$ (0.04)	$ (0.21)
Diluted	$ 0.05	$ (0.05)	$ (0.04)	$ (0.21)

For the three and six months ended June 30, 2007, there were approximately 117,000 and 918,000 stock options and warrants outstanding, respectively, that were not included in the dilutive earnings per share calculation because the effect would have been anti-dilutive. For the three and six months ended June 30, 2006, approximately 771,000 stock options and warrants outstanding were excluded from the dilutive earnings per share calculation for the same reason.

3. Investments

The following is a summary of available-for-sale securities (in thousands):

	Adjusted Cost	Gross Unrealized Losses	Estimated Fair Value
June 30, 2007			
Auction rate municipal securities	$ 8,275	$	$ 8,275
Corporate securities	154		154
	$ 8,429	$	$ 8,429
December 31, 2006			
Auction rate municipal securities	$ 10,600	$	$ 10,600
Government bonds	3,000	(1)	2,999
Corporate securities	650		650
	$ 14,250	$ (1)	$ 14,249

The original maturity date for our government bonds and corporate securities is one year or less. Although original maturities of our auction rate municipal securities are generally longer than one year, we have the right to sell these securities each auction date subject to the availability of buyers. The original maturity dates for these investments ranged from 2029 to 2047 at June 30, 2007.

Table of Contents

KONA GRILL, INC.
NOTES TO UNAUDITED CONSOLIDATED FINANCIAL STATEMENTS

4. Accrued Expenses

Accrued expenses consisted of the following (in thousands):

	June 30, 2007	December 31, 2006
Accrued payroll	$ 1,283	$ 1,471
Sales taxes	564	485
Business and income taxes	459	297
Gift cards	350	372
Accrued occupancy	244	166
Other	774	711
	$ 3,674	$ 3,502

5. Stock-Based Compensation

We maintain stock award plans which provide for discretionary grants of incentive and nonstatutory stock options, restricted stock, and other types of awards to our employees, consultants, and non-employee directors. We had 912,774 shares authorized for issuance under our stock option plans as of June 30, 2007 of which 242,635 shares remain available for future issuance. Stock options issued under these plans are granted with an exercise price at or above the fair market value of the underlying common stock on the date of grant and generally expire five or ten years from the date of grant. Employee stock options granted during 2007 generally vest 25 percent each year over a four-year period, while non-employee director options vest 25 percent each quarter over a one-year period.

Effective January 1, 2006, we adopted the fair value recognition provisions of SFAS No. 123R, *Share-Based Payment* (SFAS 123R), using the modified prospective transition method. Under this transition method, compensation cost recognized in the three and six months ended June 30, 2007 and 2006 includes compensation cost for all share-based payments granted subsequent to January 1, 2006, based on the grant date fair value estimated in accordance with SFAS 123R. All options granted prior to January 1, 2006 were fully vested. We recognized stock- based compensation expense of approximately $139,000 and $211,000 during the three months ended June 30, 2007 and 2006, respectively, and $341,000 and $402,000 during the six months ended June 30, 2007 and 2006, respectively.

The fair value of stock options granted was estimated at the date of grant using the Black-Scholes option pricing model with the following weighted average assumptions:

	Three Months Ended June 30,		Six Months Ended June 30,	
	2007	2006	2007	2006
Dividend yield	0.0%	0.0%	0.0%	0.0%
Expected volatility	34.4%	36.5%	34.4%	40.3%
Risk-free interest rate	4.9%	5.0%	4.9%	4.9%
Expected life (in years)	3.8	3.9	3.8	4.3
Weighted average fair value per option granted	$ 6.45	$ 4.44	$ 6.45	$ 4.23

The following table summarizes activity under our stock award plans during the six months ended June 30, 2007:

	Shares Under Option	Weighted Average Exercise Price	Weighted Average Remaining Contractual Term	Aggregate Intrinsic Value

Outstanding options at December 31, 2006	631,589	$	10.65				
Granted	76,750		19.36				
Forfeited	(26,950)		15.76				
Exercised	(11,250)		7.18				
Outstanding options at June 30, 2007	670,139	$	11.50	5.1 years		$	4,629,000
Exercisable at June 30, 2007	475,826	$	9.24	5.4 years		$	4,292,000

Table of Contents

KONA GRILL, INC.
NOTES TO UNAUDITED CONSOLIDATED FINANCIAL STATEMENTS

The intrinsic value of options exercised during the six months ended June 30, 2007 and 2006 was approximately $121,000 and $392,000, respectively. As of June 30, 2007, there was approximately $844,000 of total unrecognized stock-based compensation expense related to unvested share-based compensation arrangements, which is expected to be recognized over a weighted average period of 2.5 years.

6. Comprehensive Income (Loss)

Comprehensive income (loss) is defined as the aggregate change in stockholders equity, excluding changes in ownership interests. It is the sum of net income (loss) and changes in unrealized gains or losses on available-for-sale securities. The components of comprehensive income (loss), net of related tax, for the three and six months ended June 30, 2007 and 2006 were as follows (in thousands):

	Three Months Ended June 30,		Six Months Ended June 30,	
	2007	**2006**	**2007**	**2006**
Net income (loss)	$ 313	$ (303)	$ (230)	$ (1,191)
Net unrealized gains (losses) on available-for-sale securities	1	(2)	1	(17)
Total comprehensive income (loss)	$ 314	$ (305)	$ (229)	$ (1,208)

7. Income Taxes

We adopted the provisions of FIN 48, *Accounting for Uncertainty in Income Taxes*, on January 1, 2007. As a result of the implementation of FIN 48, we recognized an immaterial adjustment in the liability for unrecognized income tax benefits, which was accounted for as an increase to the January 1, 2007 accumulated deficit balance. At the adoption date of January 1, 2007, we had $65,000 of unrecognized tax benefits. Future changes in the unrecognized tax benefit are not expected to have a material impact on the effective tax rate due to the existence of a valuation allowance.

We recognize interest and penalties related to uncertain tax positions in income tax expense. There have been no material changes in the amounts of our unrecognized tax benefits or interest and penalties related to uncertain tax positions since we adopted FIN 48.

We are subject to U.S. federal income tax as well as income tax of multiple state jurisdictions. Federal income tax returns for 2003 through 2006 remain open to examination, while state and local income tax returns for 2002 through 2006 remain open to examination.

8. Commitments and Contingencies

We are engaged in various legal actions, which arise in the ordinary course of our business. Although there can be no assurance as to the ultimate disposition of these matters, it is the opinion of our management, based upon the information available at this time, that the expected outcome of these matters, individually or in the aggregate, will not have a material adverse effect on our results of operations or financial condition.

Table of Contents

Item 2. ***Management s Discussion and Analysis of Financial Condition and Results of Operations***

This information should be read in conjunction with the unaudited consolidated financial statements and notes thereto included in Item 1 of Part I of this Quarterly Report and the audited consolidated financial statements and notes thereto and Management s Discussion and Analysis of Financial Condition and Results of Operations for the year ended December 31, 2006 contained in our 2006 Annual Report on Form 10-K. The following discussion contains forward-looking statements that involve risks, uncertainties, and assumptions. Forward-looking statements include statements regarding our expectations, anticipation, intentions, beliefs, or strategies regarding the future. Forward-looking statements relating to our future economic performance, plans and objectives for future operations, and projections of revenue and other financial items are based on our beliefs as well as assumptions made by and information currently available to us. Our actual results may differ materially from those anticipated in these forward-looking statements as a result of a variety of factors, including those set forth under Item 1A, Risk Factors in our Annual Report on Form 10-K for the year ended December 31, 2006 and other reports filed from time to time with the Securities and Exchange Commission.

Overview

We currently own and operate 16 restaurants located in ten states, including our restaurant in Troy, Michigan which opened during the second quarter. We offer freshly prepared food, personalized service, and a contemporary ambiance that create a satisfying yet affordable dining experience that we believe exceeds many traditional casual dining restaurants with which we compete. Our high-volume upscale casual restaurants feature a diverse selection of mainstream American dishes as well as a variety of appetizers and entrees with an international influence, including an extensive selection of sushi items. Our menu items are freshly prepared and incorporate over 40 signature sauces and dressings that we make from scratch, creating broad-based appeal for the lifestyle and taste trends of a diverse group of guests. Our menu is standardized for all of our restaurants allowing us to deliver consistent quality meals and service. We believe that our extensive menu and generous portions offer our guests an attractive price-value proposition.

We continue to follow a disciplined growth plan focused largely on expanding our presence in new markets. To date, we have funded our restaurant development, working capital, and general corporate needs with cash flows from operations, loans from affiliates, the sale of common and preferred stock, receipt of landlord tenant improvement allowances, and borrowings under equipment term loans. We plan to open four new restaurants during 2007, of which one restaurant in Austin, Texas and another restaurant in Troy, Michigan have already opened. The two restaurants scheduled to open in the second half of 2007 are located in Baton Rouge, Louisiana and Stamford, Connecticut. Our goal is for our new restaurants to generate average annual unit volumes of $4.5 million following 24 months of operations. We believe our typical new restaurants experience gradually increasing unit volumes as guests begin to discover our concept and we begin to generate market awareness. Our restaurants are also subject to seasonal fluctuations. Despite our limited operating history, we have identified that sales in most of our restaurants typically are higher during the spring and summer months and winter holiday season.

We experience various trends in our operating cost structure. Cost of sales, labor, occupancy, and other operating expenses for our restaurants open at least 12 months generally trend consistent with restaurant sales, and we analyze those costs as a percentage of restaurant sales. We anticipate that our new restaurants will take approximately six months to achieve operating efficiencies as a result of challenges typically associated with new restaurants, including lack of market recognition and the need to hire and sufficiently train employees, as well as other factors. We expect cost of sales and labor expenses as a percentage of restaurant sales to be higher when we open a new restaurant, but decrease as a percentage of restaurant sales as the restaurant matures and as the restaurant management and employees become more efficient operating that unit. The majority of our general and administrative costs are fixed costs. We expect our general and administrative spending to increase as we add corporate personnel and infrastructure to support our growth and comply with the requirements associated with being a public company. However, we expect our general and administrative costs to decrease as a percentage of restaurant sales as we leverage these investments and realize the benefits of higher sales volumes.

9

Table of Contents

Key Measures We Use to Evaluate Our Company

Key measures we use to evaluate and assess our business include the following:

Number of Restaurant Openings. Number of restaurant openings reflects the number of restaurants opened during a particular reporting period.

Same-Store Sales Growth. Same-store sales growth reflects the periodic change in restaurant sales for the comparable restaurant base. In calculating same-store sales growth, we include a restaurant in the comparable restaurant base after it has been in operation for more than 18 months. Same-store sales growth can be generated by an increase in guest traffic counts or by increases in the per person average check amount. Menu price changes and the mix of menu items sold can affect the per person average check amount.

Average Weekly Sales. Average weekly sales represents the average of restaurant sales measured over consecutive Monday through Sunday time periods.

Average Unit Volume. Average unit volume represents the average restaurant sales for all of our restaurants open for at least 12 months before the beginning of the period measured.

Sales Per Square Foot. Sales per square foot represents the restaurant sales for our restaurants open for at least 12 months, divided by the total square feet for such restaurants.

Restaurant Operating Profit. Restaurant operating profit is defined as restaurant sales minus cost of sales, labor, occupancy, and restaurant operating expenses. Restaurant operating profit does not include general and administrative expenses, depreciation and amortization, and preopening expenses. We believe restaurant operating profit is an important component of financial results because it is a widely used metric within the restaurant industry to evaluate restaurant-level productivity, efficiency, and performance. We use restaurant operating profit as a percentage of restaurant sales as a key metric to evaluate our restaurants financial performance compared with our competitors.

Key Financial Definitions

Restaurant Sales. Restaurant sales include gross food and beverage sales, net of promotions and discounts.

Cost of Sales. Cost of sales consists of food and beverage costs.

Labor. Labor includes all direct and indirect labor costs incurred in operations.

Occupancy. Occupancy includes all rent payments associated with the leasing of real estate, including base, percentage and straight-line rent, property taxes, and common area maintenance expense. We record tenant improvement allowances as a reduction of occupancy expense over the initial term of the lease.

Restaurant Operating Expenses. Restaurant operating expenses consist of all other restaurant-level operating costs, the major components of which are utilities, credit card fees, supplies, marketing, repair and maintenance, and other expenses. Other operating expenses contain both variable and fixed components.

General and Administrative. General and administrative includes all corporate and administrative functions that support operations and provide infrastructure to facilitate our future growth. Components of this category include management and staff salaries, bonuses, stock-based compensation and related employee benefits, travel, information systems, human resources, training, corporate rent, professional and consulting fees, and corporate insurance costs.

Preopening Expense. Preopening expense consists of costs incurred prior to opening a new restaurant and is comprised principally of manager salaries and relocation, payroll and related training costs for new employees, including practice and rehearsal of service activities, and rent expense incurred during construction. We expense restaurant preopening expenses as incurred, and we expect preopening expenses to be similar for each new restaurant opening, which typically commence five months prior to a restaurant opening.

Table of Contents

Depreciation and Amortization. Depreciation and amortization expense consists of the depreciation of property and equipment and gains and losses on disposal of assets. We currently have no intangible assets or goodwill recorded on our consolidated balance sheet.

Interest Income. Interest income consists of interest earned on our cash and investments.

Interest Expense. Interest expense includes the cost of servicing our debt obligations, net of capitalized interest.

Financial Performance Overview

The following table sets forth certain information regarding our financial performance for the three and six months ended June 30, 2007 and 2006.

	Three Months Ended June 30,		Six Months Ended June 30,	
	2007	**2006**	**2007**	**2006**
Restaurant sales growth	62.7%	33.2%	58.5%	30.4%
Same-store sales growth (1)	5.0%	5.8%	3.4%	6.0%
Average weekly sales comparable restaurant base (2)	$ 99,083	$ 94,348	$ 97,161	$ 93,933
Average weekly sales non-comparable restaurant base (3)	$ 82,815	$ 76,595	$ 77,555	$ 71,983
Average unit volume (in thousands)(4)	$ 1,288	$ 1,331	$ 2,450	$ 2,545
Sales per square foot (4)	$ 183	$ 190	$ 348	$ 364
Restaurant operating profit (in thousands) (5)	$ 3,918	$ 2,708	$ 6,771	$ 4,702
Restaurant operating profit as a percentage of sales (5)	20.3%	22.8%	19.4%	21.3%

(1) Same-store sales growth reflects the periodic change in restaurant sales for the comparable restaurant base. In calculating same-store sales growth, we include a restaurant in the comparable restaurant base after it has been in operation for more than 18 months.

(2) Includes only those restaurants in the comparable restaurant base.

(3) Includes only those restaurants that are not in the comparable restaurant base that were open for the entire period.

(4) Includes only those restaurants open for at least 12 months before the beginning of the period measured.

(5) Restaurant operating profit is not a financial measurement determined in accordance with generally accepted accounting principles and should not be considered in isolation or as an alternative to income (loss) from operations. Restaurant operating profit may not be comparable to the same or similarly titled measures computed by other companies. The table below sets forth our calculation of restaurant operating profit and reconciliation to income (loss) from operations, the most comparable GAAP measure.

	Three Months Ended June 30,		Six Months Ended June 30,	
	2007	2006	2007	2006

Three Months Ended June 30, 2007 Compared with Three Months Ended June 30, 2006

Restaurant Sales. Restaurant sales increased by $7.4 million, or 62.7%, to $19.3 million during the second quarter of 2007 from $11.9 million during the prior year period primarily as a result of a $6.9 million increase associated with the opening of five new restaurants since August 2006 and a full quarter of sales from two restaurants that opened during the second quarter of last year. Same-store sales also increased $0.5 million or 5.0% reflecting higher guest traffic and a 2.0% menu price increase implemented at the beginning of 2007.

Cost of Sales. Cost of sales as a percentage of restaurant sales increased to 28.4% during the second quarter of 2007 from 27.8% during the prior year period. The increase in cost of sales as a percentage of restaurant sales reflects higher poultry, meat, and dairy prices during the second quarter of 2007. Cost of sales also increased due to a 9.0% increase in the number of operating weeks contributed by restaurants open less than six months. Cost of sales are typically higher during the first six months of operations for our new restaurants versus our mature restaurants as management teams become accustomed to predicting, managing, and servicing the sales volumes we expect at our restaurants.

Labor. Labor expenses as a percentage of restaurant sales increased to 30.9% during the second quarter of 2007 from 30.1% during the second quarter of 2006. This increase was primarily the result of opening four new restaurants during the last six months. New restaurants generally experience higher labor costs for approximately six months after opening as the restaurant management and employees become more efficient operating that unit. In addition, labor

costs were higher during the second quarter of 2007 due to minimum wage increases that went into effect in late 2006 and January 2007 in four states in which we operate.

Table of Contents

Occupancy. Occupancy expenses as a percentage of restaurant sales decreased 0.6% to 6.2% during the second quarter of 2007 from 6.8% during the second quarter of 2006. The decrease reflects increased leverage of these costs from higher average weekly sales.

Restaurant Operating Expenses. Restaurant operating expenses as a percentage of restaurant sales increased 1.7% to 14.2% during the second quarter of 2007 from 12.5% during the prior year period, primarily as a result of higher expenditures as a percentage of restaurant sales for advertising and marketing activities, in addition to higher operating expenses as a percentage of restaurant sales for our recently opened restaurants.

General and Administrative. General and administrative expenses increased by $0.2 million to $1.8 million during the second quarter of 2007 from $1.6 million during the second quarter of 2006. The $0.2 million increase is primarily attributable to a full quarter of costs associated with corporate personnel hired during 2006. Stock-based compensation expense decreased $0.1 million to $0.1 million during the second quarter of 2007 as no stock options were granted during the quarter. General and administrative expenses as a percentage of restaurant sales decreased 4.2% to 9.5% of restaurant sales during the second quarter of 2007 compared to 13.7% of restaurant sales during the prior year period as we are realizing the benefit of higher sales volumes.

Preopening Expense. Preopening expense decreased $0.3 million to $0.4 million during the second quarter of 2007 compared to $0.7 million during the second quarter of 2006. The decrease in preopening expense is attributable to fewer restaurant openings in the second quarter of 2007 as compared to the second quarter of 2006. We opened one new restaurant in Troy, Michigan in April 2007 compared to the opening of two new restaurants in the second quarter of 2006 in Dallas, Texas and Lincolnshire, Illinois.

Depreciation and Amortization. Depreciation and amortization expense increased $0.7 million to $1.5 million during the second quarter of 2007 from $0.8 million during the prior year period. The increase was primarily the result of the additional depreciation and amortization on five restaurants opened since August 2006. Depreciation and amortization expense as a percentage of restaurant sales increased 0.7% to 7.6% during the second quarter of 2007 from 6.9% during the second quarter of 2006. The percentage increase is primarily due to higher average capital expenditures for two restaurants opened in the Chicago market during 2006 and our Troy, Michigan restaurant opened during the second quarter of 2007 and the deleveraging effect of lower than average sales volumes at our Lincolnshire, Illinois restaurant.

Interest Income. Interest income decreased $0.1 million to $0.1 million during the second quarter of 2007 from $0.2 million during the second quarter of 2006, primarily due to lower average investment balances as a result of the sale of investments to fund new restaurant development.

Interest Expense. Interest expense decreased slightly due to lower average debt balances during the second quarter of 2007 and capitalization of interest expense.

Provision for Income Taxes. During both the second quarter of 2007 and 2006, we did not incur a federal income tax liability; however we recorded state income taxes of $35,000 and $45,000, respectively, for states in which no state net operating loss carryforwards exist.

Six Months Ended June 30, 2007 Compared with Six Months Ended June 30, 2006

Restaurant Sales. Restaurant sales increased by $12.9 million, or 58.5%, to $35.0 million during the first six months of 2007 from $22.1 million during the first six months of 2006 primarily as a result of a $12.1 million increase associated with the opening of five new restaurants since August 2006 and two restaurants that opened during the second quarter of last year. In addition, same-store sales increased $0.8 million or 3.4% during the first half of 2007 reflecting a 2.5% effective menu price increase and increased customer counts.

Cost of Sales. Cost of sales as a percentage of restaurant sales increased to 28.7% during the first six months of 2007 from 28.1% during the prior year period. The increase in cost of sales as a percentage of restaurant sales is primarily due to higher meat, poultry, produce, and dairy prices.

Labor. Labor expenses as a percentage of restaurant sales increased to 31.6% during the first half of 2007 from 30.5% during the first half of 2006. This increase was primarily the result of a 6.4% increase in restaurant operating weeks for restaurants open less than six months. New restaurants generally experience higher labor costs for approximately six months after opening as the restaurant management and employees become more efficient operating that unit. In addition, labor costs were higher during the first half of 2007 due to minimum wage increases that went into effect in late 2006 and January 2007 in four states in which we operate.

Occupancy. Occupancy expenses as a percentage of restaurant sales decreased 0.4% to 6.5% during the first six months of 2007 from 6.9% during the first six months of 2006. The decrease reflects increased leverage resulting from higher sales volumes.

Restaurant Operating Expenses. Restaurant operating expenses as a percentage of restaurant sales increased 0.7% to 13.9% during the first six months of 2007 from 13.2% during the first six months of 2006. The increase is primarily the result of increased costs for marketing, utilities, and supplies.

General and Administrative. General and administrative expenses were essentially flat at $3.6 million during both the first half of 2007 and 2006 as a full six months of salary and benefit costs associated with corporate personnel hired during 2006 were offset by $0.4 million of separation costs incurred during the first half of 2006 related to the retirement of our former president and chief executive officer. In addition, stock-based compensation expense decreased $0.1 million to $0.3 million during the first half of 2007 as fewer stock options were granted during the first half of 2007 as compared to the first half of 2006. General and administrative expenses as a percentage of restaurant sales decreased 6.2% to 10.3% of restaurant sales during the first half of 2007 compared to 16.5% of restaurant sales during the prior year period as we are realizing the benefit of higher sales volumes.

Preopening Expense. Preopening expense was $0.8 million during the first six months of 2007 compared to $1.0 million during the first six months of 2006. Preopening expense for the first half of 2007 primarily reflects costs for the opening of our Austin, Texas and Troy, Michigan restaurants, while preopening expense for the first half of 2006 primarily reflects costs for the opening of our Dallas, Texas and Lincolnshire, Illinois restaurants and costs related to our Houston restaurant which opened during August 2006.

Depreciation and Amortization. Depreciation and amortization expense increased $1.2 million to $2.8 million during the first half of 2007 from $1.6 million during the prior year period. The increase was primarily the result of the additional depreciation and amortization on seven restaurants opened since April 2006. Depreciation and amortization expense as a percentage of restaurant sales increased 0.9% to 7.9% during the first six months of 2007 from 7.0% during the first six months of 2006. The percentage increase is primarily due to higher average capital expenditures for two restaurants opened in the Chicago market during 2006 and our Troy restaurant opened during the second quarter of 2007.

Interest Income. Interest income of $0.3 million during the first six months of 2007 decreased $0.2 million from $0.5 million during the first six months of 2006, primarily due to lower average investment balances as a result of the sale of investments to fund new restaurant development.

Table of Contents

Interest Expense. Interest expense decreased $0.1 million during the first half of 2007 due to higher capitalized interest incurred in the construction of our new restaurants during the first half of 2007 and lower average debt balances.

Provision for Income Taxes. During both the first six months of 2007 and 2006, we did not incur a federal income tax liability; however, we recorded state income taxes of $45,000 during the first six months of 2007 and $50,000 during the first six months of 2006 for states in which no state net operating loss carryforwards exist.

Potential Fluctuations in Quarterly Results and Seasonality

Our quarterly operating results may fluctuate significantly as a result of a variety of factors, including the following:

- timing of new restaurant openings and related expenses;
- restaurant operating costs and preopening costs for our newly-opened restaurants, which are often materially greater during the first several months of operation than thereafter;
- labor availability and costs for hourly and management personnel;
- profitability of our restaurants, especially in new markets;
- increases and decreases in comparable restaurant sales;
- impairment of long-lived assets and any loss on restaurant closures;
- changes in borrowings and interest rates;
- general economic conditions;
- weather conditions or natural disasters;
- timing of certain holidays;
- new or revised regulatory requirements and accounting pronouncements;
- changes in consumer preferences and competitive conditions; and
- fluctuations in commodity prices.

Our business is also subject to seasonal fluctuations. Historically, sales in most of our restaurants have been higher during the spring and summer months and winter holiday season. Consequently, our quarterly and annual operating results and comparable restaurant sales may fluctuate significantly as a result of seasonality and the factors discussed above. Accordingly, results for any one quarter are not necessarily indicative of results to be expected for any other quarter or for any year and comparable restaurant sales for any particular future period may decrease. In the future, operating results may fall below the expectations of our investors. In that event, the price of our common stock would likely decrease.

Table of Contents

Liquidity and Capital Resources

Our primary liquidity and capital requirements have been for new restaurant development, working capital, and general corporate needs. Prior to our initial public offering, our main sources of liquidity and capital were cash flows from operations, loans from affiliates, the sale of common and preferred stock, receipt of landlord tenant improvement allowances, and borrowings under equipment term loans. We believe the proceeds from our initial public offering in August 2005 and cash generated from operations will be sufficient to meet our capital requirements through 2007. Beyond 2007 additional financing will be needed to fund working capital and restaurant development and we intend to secure such financing during 2007. Changes in our operating plans, acceleration of our expansion plans, lower than anticipated sales, increased expenses, or other events, including those described in Item 1A, Risk Factors of our Annual Report on Form 10-K for the year ended December 31, 2006 and in other documents filed from time to time with the SEC may require us to seek additional debt or equity financing on an accelerated basis. Financing may not be available on acceptable terms, or at all, and our failure to raise capital when needed could impact negatively our growth plans, financial condition, and results of operations. Additional equity financing may be dilutive to the holders of our common stock and debt financing, if available, may involve significant cash payment obligations or financial covenants and ratios that may restrict our ability to operate our business.

Equipment Loans

As of June 30, 2007, we had five equipment term loans with lenders, each collateralized by restaurant equipment. The outstanding principal balance under these loans aggregated $3.0 million. The loans bear interest at rates ranging from 7.0% to 8.5% and require monthly principal and interest payments aggregating approximately $71,000. The loans mature between June 2010 and June 2012. The loans also require us to maintain certain financial covenants calculated at the end of each calendar year, and we were in compliance with all such financial covenants as of December 31, 2006.

Cash Flows

The following table summarizes our primary sources of cash during the periods presented (in thousands).

	Six Months Ended June 30,	
	2007	**2006**
Net cash provided by (used in):		
Operating activities	$ 2,149	$ 1,840
Investing activities	(730)	(4,535)
Financing activities	(144)	(340)
Net increase (decrease) in cash and cash equivalents	$ 1,275	$ (3,035)

Operating Activities. During the first six months of 2007, net cash provided by operating activities was $2.1 million principally as a result of depreciation and amortization, the receipt of tenant improvement allowances, and non-cash stock-based compensation, partially offset by the payment of accounts payable and an increase in other current assets. During the first six months of 2006, net cash provided by operating activities was $1.8 million consisting of approximately $3.7 million in net cash used for our net loss, an increase in tenant improvement allowance receivables and other current assets, offset by $5.5 million in net cash generated from the amortization of deferred rent, depreciation and amortization, an increase in accounts payable and accrued expenses, and non-cash stock-based compensation expense.

Investing activities. We fund the development and construction of our new restaurants primarily with cash and short-term investments. Net cash used for investing activities was $0.7 million during the first half of 2007, reflecting $6.5 million for the funding of construction in progress and the purchase of property and equipment, the majority of which related to the opening of our Austin, Texas and Troy, Michigan restaurants. Investing activities also includes proceeds of $5.8 million from the sale of investments to fund this construction. Net cash used for investing activities was $4.5 million for the first half of 2006, reflecting $9.0 million for the funding of construction in progress and the purchase of property and equipment, the majority of which related to new restaurant openings and planned restaurant

openings. Investing activities also included $4.5 million from the sale of investments to fund this construction.

Table of Contents

Financing Activities. Net cash used in financing activities was $0.1 million for the first six months of 2007 principally consisting of $0.3 million of principal payments on equipment loans, partially offset by $0.2 million in proceeds from the issuance of common stock from the exercise of stock options and warrants and stock issued under our employee stock purchase plan. Net cash used in financing activities was $0.3 million for the six months ended June 30, 2006 principally consisting of $0.4 million of principal payments on equipment loans, partially offset by proceeds from the issuance of common stock under our employee stock purchase plan.

Critical Accounting Policies

Critical accounting policies are those that we believe are most important to the portrayal of our financial condition and results of operations and also require our most difficult, subjective, or complex judgments. Judgments or uncertainties regarding the application of these policies may result in materially different amounts being reported under various conditions or using different assumptions.

With the adoption of FIN 48 on January 1, 2007, we have modified the Accounting for Income Taxes section of our critical accounting policies from the previous disclosure included in Item 7, Management s Discussion and Analysis of Financial Condition and Results of Operations, included in our Annual Report on Form 10-K for the year ended December 31, 2006 as follows:

Accounting for Income Taxes

We provide for income taxes based on our estimate of federal and state tax liabilities using the recognition threshold and measurement attribute provisions of FIN 48. These estimates consider, among other items, effective rates for state and local income taxes, allowable tax credits for items such as taxes paid on reported tip income, estimates related to depreciation and amortization expense allowable for tax purposes, and the tax deductibility of certain other items. Our estimates are based on the information available to us at the time we prepare the income tax provisions. We generally file our annual income tax returns several months after our fiscal year end. Income tax returns are subject to audit by federal, state, and local governments, generally years after the returns are filed. These returns could be subject to material adjustments or differing interpretations of the tax laws.

Deferred income tax assets and liabilities are recognized for the expected future income tax consequences of carryforwards and temporary differences between the book and tax basis of assets and liabilities. Valuation allowances are established for deferred tax assets that are deemed more likely than not to be realized in the near term. We must assess the likelihood that we will be able to recover our deferred tax assets. If recovery is not likely, we establish valuation allowances to offset any deferred tax asset recorded. The valuation allowance is based on our estimates of future taxable income in each jurisdiction in which we operate, tax planning strategies, and the period over which our deferred tax assets will be recoverable. In the event that actual results differ from these estimates, we may be unable to implement certain tax planning strategies or adjust these estimates in future periods. As we update our estimates, we may need to establish an additional valuation allowance which could have a material negative impact on our results of operations or financial position, or we could reduce our valuation allowances which would have a favorable impact on our results of operations or financial position.

There have been no material changes to the other critical accounting policies previously reported in our Annual Report on Form 10-K for the year ended December 31, 2006.

Table of Contents

Item 3. ***Quantitative and Qualitative Disclosures about Market Risk***

Investments

We are exposed to market risk primarily from fluctuations in interest rates on our short-term investments. We held approximately $8.4 million in available-for-sale securities as of June 30, 2007. A hypothetical 100 basis point decline in the interest rate earned on our investments would not have a significant impact on our interest income.

Primary Market Risk Exposures

Our primary market risk exposures are in the areas of commodity costs, labor costs, and construction costs. Many of the food products purchased by us are affected by changes in weather, production, availability, seasonality, and other factors outside our control. In addition, we believe that almost all of our food and supplies are available from several sources, which helps to control food commodity risks. Our labor costs are impacted by recent state and federal legislation to increase the minimum wage rate as many of our employees are paid labor rates related to federal and state minimum wage laws. We have exposure to rising construction costs, which may impact our actual cost to develop new restaurants. Although the cost of restaurant construction will not impact significantly the operating results of the restaurant, it would impact the return on investment for such restaurant.

Inflation

The primary inflationary factors affecting our operations are food, labor, and construction costs. A large number of our restaurant personnel are paid at rates based on the applicable minimum wage, and increases in the minimum wage directly affect our labor costs. Many of our leases require us to pay taxes, maintenance, repairs, insurance, and utilities, all of which are generally subject to inflationary increases. We believe inflation has not had a material impact on our results of operations in recent years.

Item 4. ***Controls and Procedures***

We have evaluated, with the participation of our Chief Executive Officer and Chief Financial Officer, the effectiveness of our disclosure controls and procedures (as defined in Rules 13a-15(e) and 15d-15(e) under the Securities Exchange Act of 1934, as amended) as of the end of the period covered by this report. Based on this evaluation, our Chief Executive Officer and Chief Financial Officer have each concluded that our disclosure controls and procedures are effective to ensure that we record, process, summarize, and report information required to be disclosed by us in our quarterly reports filed under the Securities Exchange Act within the time periods specified by the Securities and Exchange Commission s rules and forms and that such information is accumulated and communicated to our management, including our Chief Executive Officer and Chief Financial Officer, as appropriate to allow timely decisions regarding required disclosure. During the quarterly period covered by this report, there have not been any changes in our internal controls over financial reporting that have materially affected, or are reasonably likely to materially affect, our internal control over financial reporting.
