NOTES TO CONSOLIDATED FINANCIAL STATEMENTS
(dollars in thousands, except per share data)

NOTE 1- SUMMARY OF SIGNIFICANT ACCOUNTING POLICIES

BASIS OF PRESENTATION: The accompanying consolidated financial statements include the accounts of Ohio Valley Banc Corp. ("Ohio Valley") and its wholly-owned subsidiaries, The Ohio Valley Bank Company (the "Bank"), Loan Central, Inc. ("Loan Central"), a consumer finance company, and Ohio Valley Financial Services Agency, LLC ("Ohio Valley Financial Services"), an insurance agency. Ohio Valley and its subsidiaries are collectively referred to as the "Company". All material intercompany accounts and transactions have been eliminated in consolidation.

These interim financial statements are prepared by the Company without audit and reflect all adjustments of a normal recurring nature which, in the opinion of management, are necessary to present fairly the consolidated financial position of the Company at September 30, 2008, and its results of operations and cash flows for the periods presented. The results of operations for the nine months ended September 30, 2008 are not necessarily indicative of the operating results to be anticipated for the full fiscal year ending December 31, 2008. The accompanying consolidated financial statements do not purport to contain all the necessary financial disclosures required by accounting principles generally accepted in the United States of America ("US GAAP") that might otherwise be necessary in the circumstances. The Annual Report of the Company for the year ended December 31, 2007 contains consolidated financial statements and related notes which should be read in conjunction with the accompanying consolidated financial statements.

The accounting and reporting policies followed by the Company conform to US GAAP. The preparation of financial statements in conformity with US GAAP requires management to make estimates and assumptions that affect the reported amounts of assets and liabilities and disclosure of contingent assets and liabilities at the date of the financial statements. Actual results could differ from those estimates. The allowance for loan losses is particularly subject to change.

The majority of the Company's income is derived from commercial and retail lending activities. Management considers the Company to operate in one segment, banking.

INCOME TAX: Income tax expense is the sum of the current year income tax due or refundable and the change in deferred tax assets and liabilities. Deferred tax assets and liabilities are the expected future tax consequences of temporary differences between the carrying amounts and tax bases of assets and liabilities, computed using enacted tax rates. A valuation allowance, if needed, reduces deferred tax assets to the amount expected to be realized.

CASH FLOW: For consolidated financial statement classification and cash flow reporting purposes, cash and cash equivalents include cash on hand, noninterest-bearing deposits with banks and federal funds sold. Generally, federal funds are purchased and sold for one-day periods. The Company reports net cash flows for customer loan transactions, deposit transactions, short-term borrowings and interest-bearing deposits with other financial institutions.

EARNINGS PER SHARE: Earnings per share are computed based on net income divided by the weighted average number of common shares outstanding during the period. The weighted average common shares outstanding were 3,998,509 and 4,101,908 for the three months ended September 30, 2008 and 2007, respectively. Weighted average common shares outstanding were 4,030,542 and 4,149,040 for the nine months ended September 30, 2008 and 2007, respectively. Ohio Valley had no dilutive effect and no potential common shares issuable under stock options or other agreements for any period presented.

LOANS: Loans are reported at the principal balance outstanding, net of unearned interest, deferred loan fees and costs, and an allowance for loan losses. Interest income is reported on an accrual basis using the interest method and includes amortization of net deferred loan fees and costs over the loan term. Interest income is not reported when full loan repayment is in doubt, typically when the loan is impaired or payments are past due over 90 days. Payments received on such loans are reported as principal reductions.

ALLOWANCE FOR LOAN LOSSES: The allowance for loan losses is a valuation allowance for probable incurred credit losses, increased by the provision for loan losses and decreased by charge-offs less recoveries. Loan losses are charged against the allowance when management believes the uncollectibility of a loan is confirmed. Subsequent recoveries, if any, are credited to the allowance. Management estimates the allowance balance required using past loan loss experience, the nature and volume of the portfolio, information about specific borrower situations and estimated collateral values, economic conditions and other factors. Allocations of the allowance may be made for specific loans, but the entire allowance is available for any loan that, in management's judgment, should be charged-off.

The allowance consists of specific and general components. The specific component relates to loans that are individually classified as impaired or loans otherwise classified as substandard or doubtful. The general component covers non-classified loans and is based on historical loss experience adjusted for current factors.

A loan is impaired when full payment under the loan terms is not expected. Commercial and commercial real estate loans are individually evaluated for impairment. Impaired loans are carried at the present value of expected cash flows discounted at the loan's effective interest rate or at the fair value of the collateral if the loan is collateral dependent. A portion of the allowance for loan losses is allocated to impaired loans. Large groups of smaller balance homogeneous loans, such as consumer and residential real estate loans, are collectively evaluated for impairment, and accordingly, they are not separately identified for impairment disclosures.

ADOPTION OF NEW ACCOUNTING STANDARDS: In September 2006, Financial Accounting Standards Board ("FASB") issued Statement of Financial Accounting Standards ("SFAS") No. 157, "Fair Value Measurements". SFAS 157 defines fair value, establishes a framework for measuring fair value and expands disclosures about fair value measurements. The statement also establishes a fair value hierarchy about the assumptions used to measure fair value and clarifies assumptions about risk and the effect of a restriction on the sale or use of an asset. The standard is effective for fiscal years beginning after November 15, 2007. In February 2008, the FASB issued Staff Position ("FSP") 157-2, "Effective Date of FASB Statement No. 157". This FSP delays the effective date of SFAS 157 for all nonfinancial assets and liabilities, except those that are recognized or disclosed at fair value on a recurring basis (at least annually) to fiscal years beginning after November 15, 2008, and interim periods within those fiscal years. The Company adopted the provisions of SFAS 157 on January 1, 2008. There was no material impact on the September 30, 2008 consolidated financial statements of the Company as a result of the adoption of SFAS 157.

In February 2007, the FASB issued SFAS No. 159, "The Fair Value Option for Financial Assets and Financial Liabilities". The standard provides companies with an option to report selected financial assets and liabilities at fair value and establishes presentation and disclosure requirements designed to facilitate comparisons between companies that choose different measurement attributes for similar types of assets and liabilities. The new standard is effective for the Company on January 1, 2008. The Company has not elected the fair value option for any financial assets or financial liabilities.

During 2007, the Emerging Issues Task Force ("EITF") of FASB issued EITF Issue No. 06-04, "Accounting for Deferred Compensation and Postretirement Benefit Aspects of Endorsement Split-Dollar Life Insurance Arrangements" (EITF Issue No. 06-04). EITF Issue No. 06-04 requires an employer to

recognize a liability for future postemployment benefits in accordance with SFAS No. 106, "Employers' Accounting for Postretirement Benefits Other Than Pensions". EITF Issue No. 06-04 is effective for fiscal years beginning after December 15, 2007. At December 31, 2007, the Company owned $16,339 of bank owned life insurance policies. These life insurance policies are generally subject to endorsement split-dollar life insurance agreements. An endorsement split-dollar agreement is an arrangement whereby an employer owns a life insurance policy that covers the life of an employee and, pursuant to a separate agreement, endorses a portion of the policy's death benefits to the insured employee's beneficiary. These arrangements were designed to provide a pre-and postretirement benefit for senior officers and directors of the Company. As a result of the adoption of EITF No. 06-04, the Company recognized a cumulative effect adjustment (decrease) to retained earnings of $1,079, which also represented additional liability required to be provided under EITF No. 06-04 on January 1, 2008 related to the agreements. This adjustment amount was different from the estimate made within the Company's 2007 Form 10-K at December 31, 2007.

RECLASSIFICATIONS: Certain items related to the consolidated financial statements for 2007 have been reclassified to conform to the presentation for 2008. These reclassifications had no effect on the net results of operations.

NOTE 2 - FAIR VALUE OF FINANCIAL INSTRUMENTS

As discussed in Note 1, SFAS 157 was implemented by the Company effective January 1, 2008. SFAS 157 defines fair value as the exchange price that would be received for an asset or paid to transfer a liability (an exit price) in the principal or most advantageous market for the asset or liability in an orderly transaction between market participants on the measurement date. SFAS 157 also establishes a fair value hierarchy which requires an entity to maximize the use of observable inputs and minimize the use of unobservable inputs when measuring fair value. The standard describes three levels of inputs that may be used to measure fair value:

Level 1: Quoted prices (unadjusted) for identical assets or liabilities in active markets that the entity has the ability to access as of the measurement date.

Level 2: Significant other observable inputs other than Level 1 prices, such as quoted prices for similar assets or liabilities, quoted prices in markets that are not active, and other inputs that are observable or can be corroborated by observable market data.

Level 3: Significant, unobservable inputs that reflect a company's own assumptions about the assumptions that market participants would use in pricing an asset or liability.

The following is a description of the Company's valuation methodologies used to measure and disclose the fair values of its financial assets and liabilities on a recurring or nonrecurring basis:

Securities Available-For-Sale: Securities classified as available-for-sale are reported at fair value utilizing Level 2 inputs. For these securities, the Company obtains fair value measurements using pricing models that vary based on asset class and include available trade, bid and other market information. Fair value of securities available-for-sale may also be determined by matrix pricing,

which is a mathematical technique used widely in the industry to value debt securities without relying exclusively on quoted prices for the specific securities, but rather by relying on the securities' relationship to other benchmark quoted securities.

Impaired Loans: Some impaired loans are reported at the fair value of the underlying collateral adjusted for selling costs. Collateral values are estimated using Level 2 inputs based on third party appraisals.

9

Assets and Liabilities Measured on a Recurring Basis

Assets and liabilities measured at fair value on a recurring basis are summarized below:

	Fair Value Measurements at September 30, 2008, Using		
	Quoted Prices in Active Markets for Identical Assets (Level 1)	Significant Other Observable Inputs (Level 2)	Significant Unobservable Inputs (Level 3)
Assets:			
Securities Available-For-Sale	----	$ 70,233	----

Assets and Liabilities Measured on a Nonrecurring Basis

Assets and liabilities measured at fair value on a nonrecurring basis are summarized below:

	Fair Value Measurements at September 30, 2008, Using		
	Quoted Prices in Active Markets for Identical Assets (Level 1)	Significant Other Observable Inputs (Level 2)	Significant Unobservable Inputs (Level 3)
Assets:			
Impaired Loans	----	$ 1,046	----

The portion of the impaired loan balance for which a specific allowance for credit losses was allocated totaled $2,164. The valuation allowance for these loans was $1,118 at September 30, 2008.

NOTE 3 - LOANS

Total loans as presented on the balance sheet are comprised of the following classifications:

	September 30, 2008	December 31, 2007
Residential real estate	$ 249,362	$ 250,483
Commercial real estate	191,935	196,523

Commercial and industrial	43,961	55,090
Consumer	127,011	127,832
All other	7,724	7,175
	$ 619,993	$ 637,103

At September 30, 2008 and December 31, 2007, loans on nonaccrual status were approximately $3,441 and $2,734, respectively. Loans past due more than 90 days and still accruing at September 30, 2008 and December 31, 2007 were $893 and $927, respectively.

NOTE 4 - ALLOWANCE FOR LOAN LOSSES AND IMPAIRED LOANS

Following is an analysis of changes in the allowance for loan losses for the nine-month periods ended September 30:

	2008	
Balance - January 1,	$ 6,737	$
Loans charged off:		
Commercial (1)	1,101	
Residential real estate	160	
Consumer	1,703	
Total loans charged off	2,964	
Recoveries of loans:		
Commercial (1)	94	
Residential real estate	57	
Consumer	563	
Total recoveries of loans	714	
Net loan charge-offs	(2,250)	
Provision charged to operations	2,310	
Balance - September 30,	$ 6,797	$

(1) Includes commercial and industrial and commercial real estate loans.

Information regarding impaired loans is as follows:

	September 30, 2008	December 2007
Balance of impaired loans	$ 5,543	$ 6,87
Less portion for which no specific allowance is allocated	3,379	2,56
Portion of impaired loan balance for which a specific allowance for credit losses is allocated	$ 2,164	$ 4,30

Portion of allowance for loan losses specifically allocated for the impaired loan balance	$ 1,118	$ 1,31
Average investment in impaired loans year-to-date	$ 6,492	$ 6,91

Interest recognized on impaired loans was $292 and $204 for the nine-month periods ended September 30, 2008 and 2007, respectively. Accrual basis income was not materially different from cash basis income for the periods presented.

NOTE 5 - CONCENTRATIONS OF CREDIT RISK AND FINANCIAL INSTRUMENTS WITH OFF-BALANCE SHEET RISK

The Company, through its subsidiaries, grants residential, consumer, and commercial loans to customers located primarily in the central and southeastern areas of Ohio as well as the western counties of West Virginia. Approximately 3.74% of total loans were unsecured at September 30, 2008 as compared to 4.39% at December 31, 2007.

The Bank is a party to financial instruments with off-balance sheet risk in the normal course of business to meet the financing needs of its customers. These financial instruments include commitments to extend credit, standby letters of credit and financial guarantees. The contract amounts of these instruments are not included in the consolidated financial statements. At September 30, 2008, the contract amounts of

these instruments totaled approximately $76,906, compared to $82,125 at December 31, 2007. Since many of these instruments are expected to expire without being drawn upon, the total contract amounts do not necessarily represent future cash requirements.

NOTE 6 - OTHER BORROWED FUNDS

Other borrowed funds at September 30, 2008 and December 31, 2007 are comprised of advances from the Federal Home Loan Bank ("FHLB") of Cincinnati, promissory notes and Federal Reserve Bank ("FRB") Notes.

	FHLB Borrowings	Promissory Notes	FRB Notes
September 30, 2008...........	$ 48,166	$ 6,094	$ 5,500
December 31, 2007............	$ 55,779	$ 5,723	$ 5,500

Pursuant to collateral agreements with the FHLB, advances are secured by $226,524 in qualifying mortgage loans and $6,280 in FHLB stock at September 30, 2008. Fixed rate FHLB advances of $48,166 mature through 2033 and have interest rates ranging from 2.13% to 6.62%. There were no variable rate FHLB borrowings at September 30, 2008.

At September 30, 2008, the Company had a cash management line of credit enabling it to borrow up to $60,000 from the FHLB. All cash management advances have an original maturity of 90 days. The line of credit must be renewed on an annual basis. There was $60,000 available on this line of credit at September 30, 2008.

Based on the Company's current FHLB stock ownership, total assets and pledgeable residential first mortgage loans, the Company had the ability to obtain borrowings from the FHLB up to a maximum of $167,796 at September 30, 2008.

Promissory notes, issued primarily by Ohio Valley, have fixed rates of 3.00% to 5.25% and are due at various dates through a final maturity date of November 12, 2010. A total of $4,021 represented promissory notes payable by Ohio Valley to related parties.

FRB notes consist of the collection of tax payments from Bank customers under the Treasury Tax and Loan program. These funds have a variable interest rate and are callable on demand by the U.S. Treasury. The interest rate for the Company's FRB notes was 1.30% at September 30, 2008 and 4.00% at December 31, 2007. Various investment securities from the Bank used to collateralize the FRB notes totaled $5,820 at September 30, 2008 and $5,945 at December 31, 2007.

Letters of credit issued on the Bank's behalf by the FHLB to collateralize certain public unit deposits as required by law totaled $56,250 at September 30, 2008 and $34,950 at December 31, 2007.

Scheduled principal payments over the next five years:

	FHLB Borrowings	Promissory Notes	FRB Notes
Year Ended 2008	$ 2	$ 2,926	$ 5,500
Year Ended 2009	16,005	2,168	----
Year Ended 2010	26,005	1,000	----
Year Ended 2011	6,006	----	----
Year Ended 2012	6	----	----
Thereafter	142	----	----
	$ 48,166	$ 6,094	$ 5,500

12

NOTE 7 - SUBORDINATED DEBENTURES AND TRUST PREFERRED SECURITIES

On March 22, 2007, a trust formed by Ohio Valley issued $8,500 of adjustable-rate trust preferred securities as part of a pooled offering of such securities. The rate on these trust preferred securities will be fixed at 6.58% for five years, and then convert to a floating-rate term on March 15, 2012, based on a rate equal to the 3-month LIBOR plus 1.68%. There were no debt issuance costs incurred with these trust preferred securities. The Company issued subordinated debentures to the trust in exchange for the proceeds of the offering. The subordinated debentures must be redeemed no later than June 15, 2037. On March 26, 2007, the proceeds from these new trust preferred securities were used to pay off $8,500 in higher cost trust preferred security debt, with a floating rate of 8.97%. This payoff of $8,500 in trust preferred securities was the result of an early call feature that allowed the Company to redeem the entire portion of these subordinated debentures at par value. For additional discussion, please refer to the caption titled "Subordinated Debentures and Trust Preferred Securities" within Item 2, Management's Discussion and Analysis of Financial Condition and Results of Operations of this Form 10-Q.

ITEM 2. MANAGEMENT'S DISCUSSION AND ANALYSIS OF FINANCIAL CONDITION AND RESULTS OF OPERATIONS

(dollars in thousands, except share and per share data)

Forward Looking Statements

Except for the historical statements and discussions contained herein, statements contained in this report constitute "forward looking statements" within the meaning of Section 27A of the Securities Act of 1933 and Section 21E of the Securities Act of 1934 and as defined in the Private Securities Litigation Reform Act of 1995. Such statements are often, but not always, identified by the use of such words as "believes," "anticipates," "expects," and similar expressions. Such statements involve various important assumptions, risks, uncertainties, and other factors, many of which are beyond our control, which could cause actual results to differ materially from those expressed in such forward looking statements. These factors include, but are not limited to, the risk factors discussed in Part I, Item 1A of Ohio Valley's Annual Report on Form 10-K for the fiscal year ended December 31, 2007 and Ohio Valley's other securities filings. Readers are cautioned not to place undue reliance on such forward looking statements, which speak only as of the date hereof. The Company undertakes no obligation and disclaims any intention to republish revised or updated forward looking statements as a result of unanticipated future events.

Financial Overview

The Company is primarily engaged in commercial and retail banking, offering a blend of commercial, consumer and agricultural banking services within central and southeastern Ohio as well as western West Virginia. The banking services offered by the Bank include the acceptance of deposits in checking, savings, time and money market accounts; the making and servicing of personal, commercial, floor plan and student loans; and the making of construction and real estate loans. The Bank also offers individual retirement accounts, safe deposit boxes, wire transfers and other standard banking products and services. As part of its lending function, the Bank also offers credit card services. Loan Central engages in consumer finance, offering smaller balance personal and mortgage loans to individuals with higher credit risk history. Loan Central's line of business also includes seasonal tax refund loan services during the January through April periods. Ohio Valley Financial Services sells life insurance.

For the three months ended September 30, 2008, net income increased by $52, or 2.8%, compared to the same quarterly period in 2007, to finish at $1,885. Earnings per share for the third quarter of 2008 increased $.02, or 4.4%, compared to the same quarterly period in 2007, to finish at $.47 per share. For the nine months ended September 30, 2008, net income increased by $287, or 5.4%, compared to the same period in 2007, to finish at $5,581. Earnings per share for the first nine months of 2008 finished at

13

$1.38, up $.10, or 7.8%, over the same period in 2007. Earnings per share growth for both the quarterly and year-to-date periods ending September 30, 2008 continues to exceed the nominal dollar net income growth pace due to the Company's stock repurchase program, with increases in treasury stock repurchases lowering the weighted average number of common shares outstanding. The annualized net income to average asset ratio, or return on assets (ROA), and net income to average equity ratio, or return on equity (ROE), both increased to ..95% and 12.20% during the first nine months of 2008, as compared to .92% and 11.72%, respectively, for the same period in 2007. The Company's growth in earnings during the first nine months of 2008 was accomplished primarily by: 1) net interest margin expansion as a result of the lower short-term interest rate environment initiated by the Federal Reserve Bank, which led to lower interest expense and an 8.1% year-to-date improvement in net interest income; and 2) noninterest income improvement of 10.0% over 2007's first nine months due to the increased transaction volume related to the Company's service charges on deposit

accounts and seaonal tax clearing services performed in the first quarter of 2008.

The consolidated total assets of the Company decreased $6,853, or 0.9%, during the first nine months of 2008 as compared to year-end 2007, to finish at $776,565. This drop in assets was led by a decrease in the Company's loan balances, which decreased $17,110 from year-end 2007, and lower investment securities, which decreased $6,203 from year-end 2007. Loan growth continues to be challenged by the various economic trends that have had a negative impact on consumer spending, including the troubled housing crisis as well as rising energy and food costs. A lower consumer demand for loans has caused decreases in the Company's entire loan portfolio from year-end 2007, which include commercial, consumer and real estate loan balances. Maturity runoff of U.S. Government sponsored entity securities led the decrease in the Company's investment securities. The loan and investment security decreases contributed to an excess liquidity position, causing increases of $7,393 in interest-yielding deposits in other financial institutions and $3,818 in cash and cash equivalents, from year-end 2007. While the demand for loans decreased during the first nine months of 2008, the Company was able to benefit from growth in its total deposit liabilities of $4,973 from year-end 2007, to use as funding sources for potential earning asset growth during the remaining quarter of 2008. Interest-bearing deposit liability growth was led by surges in the Company's public fund NOW accounts, up $36,555 from year-end 2007, and Market Watch product, up $25,832 from year-end 2007, partially offset by a decrease in time deposits of $56,527 from year-end 2007. Furthermore, the Company's noninterest-bearing demand deposits decreased $1,363 from year-end 2007. The total deposits retained from year-end 2007 were partially used to fund the runoff in the Company's securities sold under agreements to repurchase ("repurchase agreements") and repayments of other borrowed funds, which decreased $5,856 and $7,242, respectively, from year-end 2007.

Comparison of Financial Condition at September 30, 2008 and December 31, 2007

The following discussion focuses, in more detail, on the consolidated financial condition of the Company at September 30, 2008 compared to December 31, 2007. The purpose of this discussion is to provide the reader a more thorough understanding of the consolidated financial statements. This discussion should be read in conjunction with the interim consolidated financial statements and the footnotes included in this Form 10-Q.

Cash and Cash Equivalents

The Company's cash and cash equivalents consist of cash and balances due from banks and federal funds sold. The amounts of cash and cash equivalents fluctuate on a daily basis due to customer activity and liquidity needs. At September 30, 2008, cash and cash equivalents had increased $3,818, or 22.6%, to $20,712 as compared to $16,894 at December 31, 2007. The increased liquidity position of the Company at September 30, 2008 was the result of lower loan demand and investment security maturities combined

with an increase in interest-bearing deposits. As liquidity levels vary continuously based on consumer activities, amounts of cash and cash equivalents can vary widely at any given point in time. Management believes that the current balance of cash and cash equivalents remains at a level that will meet cash obligations and provide adequate liquidity. Further information regarding the Company's liquidity can be found under the caption "Liquidity" in this Management's Discussion and Analysis.

Interest-Bearing Deposits in Other Financial Institutions

At September 30, 2008, the Company had a total of $8,026 invested as interest-bearing deposits in other financial institutions, an increase from only $633 at December 31, 2007. This increase is largely the result of the Company's excess liquidity position due to decreasing loan demand and excess deposit liabilities. Historically, the Company has typically invested its excess funds with various correspondent banks in the form of federal funds sold, a common strategy performed by most banks. Beginning in the second quarter of 2008, the Company utilized a new relationship with a deposit placement service provider known as CDARS, or the Certificate of Deposit Account Registry Service, to invest its excess funds. CDARS provides financial institutions with the means to invest its own funds through One-Way Sell transactions for various maturity terms. The rates offered for the terms selected by the Company, between 2.4 and 2.8% at a weighted average maturity of 7 weeks compare favorably to federal funds rate offerings that were 2.0% at September 30, 2008, and have since been lowered to 1.0%. The Company views this investment option as a margin-enhancing alternative when investing its excess funds and will continue to utilize this method when the need arises. Furthermore, CDARS balances are 100% secured by Federal Deposit Insurance Corporation ("FDIC") insurance as compared to federal funds sold balances which were considered unsecured as of this report's measurement date of September 30, 2008. Since then, as part of the FDIC's "Liquidity Guarantee Program" announced on October 14, 2008, federal funds sold balances (or inter-banking funding) will now be 100% guaranteed by the FDIC. The ability of the Company to issue these guaranteed federal funds sold balances will expire on June 30, 2009.

Securities

During the first nine months of 2008, investment securities decreased $6,203 to finish at $87,841, a decrease of 6.6% as compared to year-end 2007. The Company's investment securities portfolio consists of mortgage-backed securities, U.S. Government sponsored entity ("GSE") securities and obligations of states and political subdivisions. GSE securities decreased $9,976, or 25.3%, as a result of several large maturities during both the first and second quarters of 2008. In addition to attractive yield opportunities and a desire to increase diversification within the Company's securities portfolio, GSE securities have also been used to satisfy pledging requirements for repurchase agreements. At September 30, 2008, the Company's repurchase agreements decreased 14.5%, reducing the need to secure these balances and impacting the runoff in GSE securities. This decrease was partially offset by increases in both mortgage-backed securities and obligations of states and political subdivisions, which were up $2,141, or 5.5%, and $1,632, or 10.2%, respectively, from year-end 2007. The Company continues to benefit from the advantages of mortgage-backed securities, which make up the largest portion of the Company's investment portfolio, totaling $40,805, or 46.5% of total investments at September 30, 2008. The primary advantage of mortgage-backed securities has been the increased cash flows due to the more rapid (monthly) repayment of principal as compared to other types of investment securities, which deliver proceeds upon maturity or call date. Principal repayments from mortgage-backed securities totaled $6,257 from January 1, 2008 through September 30, 2008. For the remainder of 2008, the Company's focus will be to generate interest revenue primarily through loan growth, as loans generate the highest yields of total earning assets.

Loans

The loan portfolio represents the Company's largest asset category and is its most significant source of interest income. During the first nine months of 2008, total loans were down $17,110, or 2.7%, from

year-end 2007. Lower loan balances were mostly influenced by total commercial loans, which were down $15,717, or 6.2%, from year-end 2007. The Company's commercial loans include both commercial real estate and commercial and industrial loans. While commercial loan balances are down, management continues to place emphasis on its commercial lending, which generally yields a higher return on investment as compared to other types of loans. The Company's commercial and industrial loan portfolio, down $11,129, or 20.2%, from year-end 2007, consists of loans to corporate borrowers primarily in small to mid-sized industrial and commercial companies that include service, retail and wholesale merchants. Collateral securing these loans includes equipment, inventory, and stock. Commercial real estate, the Company's largest segment of commercial loans, decreased $4,588, or 2.3%, largely due to lower loan demand as well as commercial loan paydowns and payoffs. This segment of loans is mostly secured by commercial real estate and rental property. Commercial real estate consists of loan participations with other banks outside the Company's primary market area. Although the Company is not actively marketing participation loans outside its primary market area, it is taking advantage of the relationships it has with certain lenders in those areas where the Company believes it can profitably participate with an acceptable level of risk. The commercial loan portfolio, including participation loans, consists primarily of rental property loans (19.8% of portfolio), medical industry loans (14.4% of portfolio), land development loans (10.8% of portfolio), and hotel and motel loans (10.5% of portfolio). During the first nine months of 2008, the primary market areas for the Company's commercial loan originations, excluding loan participations, were in the areas of Gallia, Jackson and Franklin counties of Ohio, which accounted for 62.5% of total originations. The growing West Virginia markets also accounted for 27.2% of total originations for the same time period. While management believes lending opportunities exist in the Company's markets, future commercial lending activities will depend upon economic and related conditions, such as general demand for loans in the Company's primary markets, interest rates offered by the Company and normal underwriting considerations. Additionally, the potential for larger than normal commercial loan payoffs may limit loan growth during the remainder of 2008.

Generating residential real estate loans remains a key focus of the Company's lending efforts. Residential real estate loan balances comprise the largest portion of the Company's loan portfolio and consist primarily of one- to four-family residential mortgages and carry many of the same customer and industry risks as the commercial loan portfolio. During the first nine months of 2008, total residential real estate loan balances decreased $1,121, or 0.4%, from year-end 2007 to total $249,362. The decrease was largely driven by a reduction in the Company's one-year adjustable-rate mortgage balances of $8,007, or 19.0%, from year-end 2007. During 2006 and 2007, consumer demand for fixed-rate real estate loans continued to increase due to the continuation of lower, more affordable, mortgage rates. As long-term interest rates continue to remain relatively stable in 2008, consumers continue to pay off and refinance their variable rate mortgages, although the volume of refinancings continues to stabilize as compared to 2007 and 2006. This has resulted in lower one-year adjustable-rate mortgage balances at the end of 2008's nine-month period as compared to year-end 2007. Partially offsetting the decreases in variable rate real estate loan balances was an increase to the Company's five-year adjustable rate (2-step) product, with balances being up $6,219, or 95.2%, from year-end 2007. This product allows the consumer to secure a fixed initial interest rate for the first five years, with the loan adjusting to a variable interest rate for years 6-30. Real estate loan growth was also experienced in the Company's longer-termed, fixed-rate real estate loans, which were up $2,202, or 1.2%, from year-end 2007. Terms of these fixed-rate loans include 15-, 20- and 30-year periods. To help further satisfy demand for longer-termed, fixed-rate real estate loans, the Company continues to originate and sell some fixed-rate mortgages to the secondary market, and has sold $10,480 in loans during the first nine months of 2008, which were up $7,158, or 215.4%, over the volume sold during the first nine months of 2007. The remaining real estate loan portfolio

balances decreased $1,335 primarily from the Company's residential construction loans.

Also contributing to the loan portfolio decrease were consumer loans, which were down $821, or 0.6%, from year-end 2007. The Company's consumer loans are secured by automobiles, mobile homes, recreational vehicles and other personal property. Personal loans and unsecured credit card receivables

are also included as consumer loans. The decrease in consumer volume was mostly attributable to the automobile indirect lending segment, which decreased $2,083, or 7.2%, from year-end 2007. While the automobile lending segment continues to represent the largest portion of the Company's consumer loan portfolio, management's emphasis on profitable loan growth with higher returns has contributed most to the reduction in loan volume within this area. Indirect automobile loans bear additional costs from dealers that partially offset interest revenue and lower the rate of return. Furthermore, economic factors that have weakened the economy and consumer spending have caused a decline in automobile loan volume. As short-term rates have aggressively moved down since September 2007, continued competition with local banks and alternative methods of financing, such as captive finance companies offering loans at below-market interest rates, have continued to challenge automobile loan growth during the first nine months of 2008. Partially offsetting the decreases in auto loans was an increase to the Company's capital line loan balances, which increased $1,432, or 7.4%, from year-end 2007.

The Company recognized an increase of $549 in other loans from year-end 2007. Other loans consist primarily of state and municipal loans and overdrafts. This increase was largely due to an increase in overdrafts of $282.

The Company continues to monitor the pace of its loan volume, as it has experienced a 2.2% drop-off within its total loan portfolio during the first nine months of 2008. The well-documented housing market crisis and rising energy costs have impacted consumer spending and have led to lower consumer demand for loans. Furthermore, the Company continues to view the consumer loan segment as a decreasing portfolio, due to higher loan costs, increased competition in automobile loans and a lower return on investment as compared to the other loan portfolios. As a result, the Company expects total loan growth in 2008 to be challenged, with volume to continue at a stable-to-declining pace throughout the rest of the year. The Company remains committed to sound underwriting practices without sacrificing asset quality and avoiding exposure to unnecessary risk that could weaken the credit quality of the portfolio.

Allowance for Loan Losses

Management continually monitors the loan portfolio to identify potential portfolio risks and to detect potential credit deterioration in the early stages, and then establishes reserves based upon its evaluation of these inherent risks. During the first nine months of 2008, the Company's allowance for loan losses remained relatively stable, finishing at $6,797, as compared to $6,737 at year-end 2007. This stable level of reserves was, in part, due to the declining levels of the Company's loan portfolio, down 2.7% from year-end 2007. The level of nonperforming loans, which consist of nonaccruing loans and accruing loans past due 90 days or more, increased from $3,661 at year-end 2007 to $4,334 at September 30, 2008. During the first quarter, the Company experienced problems with one of its commercial borrowers that was unable to meet the debt requirements of its loans. During this time, the Company stopped recognizing interest income on the loans, reversed all interest that had been accrued and unpaid and classified the loans as nonperforming. At March 31, 2008, the ratio of nonperforming loans to total loans grew to 1.40% as a result of this classification. During the second quarter, continued analysis of these

loans was performed, which included the reviews of updated appraisals that reflected a decline in market values due to deteriorating market conditions. This analysis, along with continued loan deterioration of this large commercial borrower, prompted management to charge down the loan by $750, including estimated costs to sell, to the estimated fair value of the collateral. Subsequently, the Company acquired these properties through foreclosure and transferred the loans to other real estate owned ("OREO"). This shifted approximately $4,214 from nonperforming loans to nonperforming assets, which contributed to the increase in its nonperforming assets from $3,922 at year-end 2007 to $8,947 at September 30, 2008. As a result, the Company's ratio of nonperforming loans to total loans decreased to .70% at September 30, 2008, while the ratio of nonperforming assets to total assets increased from .50% at year-end 2007 to 1.15% at September 30, 2008.

17

During the first nine months of 2008, net charge-offs totaled $2,250, which were down $1,769 from the same period in 2007, in large part due to commercial charge-offs of specific allocations that were reflected in the allowance for loan losses from 2007. Management believes that the allowance for loan losses is adequate and reflects probable incurred losses in the loan portfolio. Asset quality remains a key focus, as management continues to stress not just loan growth, but quality in loan underwriting as well.

Deposits

Deposits, both interest- and noninterest-bearing, continue to be the most significant source of funds used by the Company to support earning assets. Deposits are influenced by changes in interest rates, economic conditions and competition from other banks. During the first nine months of 2008, total deposits were up $4,973, or 0.8%, from year-end 2007. The change in deposits came primarily from an increase in the Company's interest-bearing demand deposits and money market deposit balances.

Interest-bearing NOW account balances increased $33,956, or 51.7%, during the first nine months of 2008 as compared to year-end 2007. This growth was largely driven by a $36,555 increase in public fund balances related to the local city and county school construction projects currently in process within Gallia County, Ohio.

Further deposit growth came from the Company's money market deposit balances, which were up $27,343, or 37.8%, during the first nine months of 2008 as compared to year-end 2007. This increase was from the Company's Market Watch money market account product, which generated $25,832 in new deposit balances from year-end 2007, mostly during the second quarter of 2008. Introduced in August 2005, the Market Watch product is a limited transaction investment account with tiered rates that competes with current market rate offerings and serves as an alternative to certificates of deposit for some customers. In the second quarter of 2008, the Company began marketing a special six-month introductory rate offer of 3.50% APY that would be for new Market Watch accounts. This special offer was well received by the Bank's customers and contributed to most of the year-to-date increase in 2008. As a result, Market Watch deposit balances increased $20,670, or 28.4%, during the second quarter of 2008.

Partially offsetting money market deposit growth were time deposits, decreasing $56,527, or 16.6%, from year-end 2007. Time deposits, particularly CD's, are the most significant source of funding for the Company's earning assets, making up 47.9% of total deposits. With loan balances on a declining pace, down 2.7% from year-end 2007, there has not been an aggressive need to deploy time deposits as a funding source. Yet, as market rates have aggressively lowered since September 2007, the Company has seen the cost of its retail CD balances continue to

reprice downward (as a lagging effect to the actions by the Federal Reserve) to reflect current deposit rates. This lagging effect has caused the Company's retail CD portfolio to become more of an attractive funding source to fund earning assets, producing an average cost of 4.24% during the first nine months of 2008 as compared to 4.85% during the same period in 2007. Wholesale fund deposits (i.e., brokered and network CD issuances) have not been as responsive to the decline in short-term market rates, producing an average cost of 4.80% during the first nine months of 2008 as compared to 4.85% during the same period in 2007, well exceeding the price to fund asset growth with retail CD balances. As a result, management will continue to emphasize its core deposit funding and retail CD balances as a more affordable and cost effective source to subsidize earning asset growth as compared to wholesale deposits.

The Company's interest-free funding source, noninterest bearing demand deposits, also decreased $1,363, or 1.7%, from year-end 2007.

The Company will continue to experience increased competition for deposits in its market areas, which should challenge its net growth in retail CD balances. The Company will continue to emphasize growth

in its core deposits as well as to utilize its retail CD funding sources during the remainder of 2008, reflecting the Company's efforts to reduce its reliance on higher cost funding.

Securities Sold Under Agreements to Repurchase

Repurchase agreements, which are financing arrangements that have overnight maturity terms, were down $5,856, or 14.5%, from year-end 2007. This decrease was mostly due to seasonal fluctuations of two commercial accounts in the first nine months of 2008.

Other Borrowed Funds

The Company also accesses other funding sources, including short-term and long-term borrowings, to fund asset growth and satisfy short-term liquidity needs. Other borrowed funds consist primarily of Federal Home Loan Bank (FHLB) advances and promissory notes. During the first nine months of 2008, other borrowed funds were down $7,242, or 10.8%, from year-end 2007. Management used the growth in deposit proceeds to repay FHLB borrowings during the first nine months of 2008. While deposits continue to be the primary source of funding for growth in earning assets, management will continue to utilize various wholesale borrowings to help manage interest rate sensitivity and liquidity.

Subordinated Debentures and Trust Preferred Securities

On March 22, 2007, a trust formed by Ohio Valley issued $8,500 of adjustable-rate trust preferred securities as part of a pooled offering of such securities. The Company used the proceeds from these trust preferred securities to pay off $8,500 in higher cost trust preferred security debt on March 26, 2007. The replacement of the higher cost trust preferred security debt was a strategy by management to lower interest rate pressures that were impacting interest expense and help improve the Company's net interest margin. The early extinguishment and replacement of this higher cost debt improved earnings by nearly $54 pre-tax ($35 after taxes) during the first nine months of 2008 as compared to the same period in 2007. For additional discussion on the terms and conditions of this new trust preferred security issuance, please refer to "Note 7 - Subordinated Debentures and Trust Preferred Securities" within Item 1, Notes to the Consolidated Financial Statements of this Form 10-Q.

Shareholders' Equity

The Company maintains a capital level that exceeds regulatory requirements as a margin of safety for its depositors. Total shareholders' equity at September 30, 2008 of $61,823 was up $312, or 0.5%, as compared to the balance of $61,511 on December 31, 2007. Contributing most to this increase was year-to-date net income of $5,581 partially offset by cash dividends paid of $2,304, or $.57 per share, year-to-date, and increased share repurchases. The Company had treasury stock totaling $15,713 at September 30, 2008, an increase of $2,269 as compared to the total at year-end 2007. The Company anticipates repurchasing additional common shares from time to time as authorized by its stock repurchase program. The Board of Directors authorized the repurchase of up to 175,000 of its common shares between February 15, 2008 and February 15, 2009. As of September 30, 2008, 77,853 shares had been repurchased pursuant to that authorization.

Comparison of
Results of Operations
for the Quarter and Year-To-Date Periods
Ended September 30, 2008 and 2007

The following discussion focuses, in more detail, on the consolidated results of operations of the Company for the quarterly and year-to-date periods ended September 30, 2008 compared to the same periods in 2007. The purpose of this discussion is to provide the reader a more thorough understanding of

19

the consolidated financial statements. This discussion should be read in conjunction with the interim consolidated financial statements and the footnotes included in this Form 10-Q.

Net Interest Income

The most significant portion of the Company's revenue, net interest income, results from properly managing the spread between interest income on earning assets and interest expense on interest-bearing liabilities. The Company earns interest and dividend income from loans, investment securities and short-term investments while incurring interest expense on interest-bearing deposits and repurchase agreements, as well as short-term and long-term borrowings. For the third quarter of 2008, net interest income increased $719, or 10.3%, as compared to the same quarter in 2007. Through the first nine months of 2008, net interest income increased $1,712, or 8.1%, as compared to the same period in 2007. The increase in quarterly and year-to-date net interest income is primarily due to an expanding net interest margin caused by lower funding costs.

Total interest income decreased $1,127, or 8.2%, for the third quarter of 2008 and decreased $1,762, or 4.3%, during the first nine months of 2008 as compared to the same periods in 2007. This drop in interest earnings was largely due to a decrease in the yields earned on average earning assets during both the quarterly and year-to-date periods of 2008 as compared to the same periods in 2007. The average yield on earning assets for the three months ended September 30, 2008 decreased 66 basis points to 6.96% as compared to the same period in 2007. The average yield on earning assets for the nine months ended September 30, 2008 decreased 51 basis points to 7.14% as compared to the same period in 2007. Both negative effects reflect the decreases in short-term interest rates since September of 2007. Partially offsetting the assets yield decreases were positive contributions from growth in the Company's average earning assets, up $6,104, or 0.8%, during the third quarter of 2008 and up $18,039, or 2.5%, during the first nine months of 2008 as compared to the same periods in 2007. The growth in average earning assets was largely comprised of residential real estate loan and commercial real estate loan participations since September 2007. In addition, during the third quarter of 2008, the Company received over $2,800 in payoff funds on a troubled commercial credit. This loan settlement resulted

in the recovery of $173 in loan interest and late fees. Further contributing to interest revenue was addional fee income from increased originations of the Company's refund anticipation loans ("RAL"). The Company's participation with a third party tax software provider has given us the opportunity to make RAL loans during the tax refund loan season, typically from January through March. RAL loans are short-term cash advances against a customer's anticipated income tax refund. Through the first nine months of 2008, the Company had recognized $265 in RAL fees as compared to $94 during the same period in 2007.

In relation to lower earning asset yields, the Company's total interest expense decreased $1,846, or 27.2%, for the third quarter of 2008 and decreased $3,474, or 17.6%, during the first nine months of 2008 as compared to the same periods in 2007, as a result of lower interest-bearing liability costs. Since September 2007, the Federal Reserve has reduced the target Federal Funds rate 425 basis points. That reduction has caused a corresponding downward shift in short-term interest rates, while longer-term rates have not decreased to the same extent. The Bank had positioned its balance sheet so that there were more interest-bearing liabilites subject to repricing than interest rates on loans. As a result, interest paid on liabilities decreased more than interest earned on assets. The short-term rate decreases impacted the repricings of various Bank deposit products, including public fund NOW accounts, Gold Club and Market Watch accounts. Interest rates on CD balances will continue to reprice at lower rates (as a lagging effect to the Federal Reserve action to drop the Federal Funds rate), which will continue to lower funding costs and improve the net interest margin for the remainder of 2008. As a result of the decrease in rates from September 2007, the Bank's total weighted average funding costs have decreased 75 basis points from September 30, 2007 to September 30, 2008.

As a result of lower funding costs, increased RAL fees and the recovery of interest and late fees on a troubled commercial credit, the Company's net interest margin increased 37 basis points from 3.90% to

4.27% for the third quarter of 2008 and increased 21 basis points from 3.99% to 4.20% during the first nine months of 2008 as compared to the same periods in 2007. The net interest margin is expected to benefit for the remainder of 2008 as a result of the Federal Reserve's recent one-half percent cuts in the targeted Federal Funds rate on both October 8 and October 29, 2008. It is difficult, though, to speculate on future changes in net interest margin and the frequency and size of changes in market interest rates. The past year has seen the banking industry under significant stress due to declining real estate values and asset impairment. The Federal Reserve's most recent actions of decreasing the target Federal Funds rate by 100 basis points in October 2008 was necessary to take steps in repairing the recessionary problems and promote economic stability. However, there can be no assurance of additional future rate cuts as changes in market interest rates are dependent upon a variety of factors that are beyond the Company's control. For additional discussion on the Company's rate sensitive assets and liabilities, please see Item 3, Quantitative and Qualitative Disclosure About Market Risk, of this Form 10-Q.

Provision for Loan Losses

Credit risk is inherent in the business of originating loans. The Company sets aside an allowance for loan losses through charges to income, which are reflected in the consolidated statement of income as the provision for loan losses. This provision charge is recorded to achieve an allowance for loan losses that is adequate to absorb losses probable and incurred in the Company's loan portfolio. Management performs, on a quarterly basis, a detailed analysis of the allowance for loan losses that encompasses loan portfolio composition, loan quality, loan loss experience and other relevant economic factors. Provision expense increased $361, or 108.7%, for the three months ended

September 30, 2008, and increased $976, or 73.2%, for the first nine months of 2008 as compared to the same periods in 2007. The increase in provision expense was impacted by a $750 charge-off taken on a loan relationship with a large commercial borrower during the second quarter of 2008. Management deemed this action as appropriate to account for the credit deterioration that was evident from updated appraisal reviews. The properties have since been acquired by the Company through foreclosure. Management will seek to sell or liquidate the OREO properties.

While provision expense increased both 108.7% and 73.2% during the three-month and nine-month periods ended September 30, 2008 as compared to the same periods in 2007, the Company's net charge-offs were down by $1,769, or 44.0%, during the first nine months of 2008 as compared to the same period in 2007. This relationship between rising provision expense and lower net charge-offs was primarily from a timing difference that is a direct result of the Company's significant commercial loan allocations that were made to the allowance for loan losses during the fourth quarter of 2006. At that time, a specific allocation for loan losses was made on behalf of a commercial loan that was determined to be impaired, which required a corresponding increase to provision for loan losses in 2006. During the first and second quarters of 2007, charge-offs were recorded on the specific allocation established for the impaired loan of 2006, effectively causing the majority of the $3,378 in commercial loan charge-offs at September 30, 2007.

Management believes that the allowance for loan losses is adequate at September 30, 2008 and reflective of probable losses in the portfolio. The allowance for loan losses was 1.10% of total loans at September 30, 2008, up from the allowance level as a percentage of total loans of 1.06% at December 31, 2007. Future provisions to the allowance for loan losses will continue to be based on management's quarterly in-depth evaluation that is discussed in further detail under the caption "Critical Accounting Policies - Allowance for Loan Losses" of this Form 10-Q.

Noninterest Income

Noninterest income for the three months ended September 30, 2008 was $1,574, an increase of $18, or 1.2%, over the same period in 2007. Noninterest income for the nine months ended September 30, 2008 was $4,745, an increase of $430, or 10.0%, over the same period in 2007. These results were impacted

21

mostly by service charges on deposit accounts, as well as seasonal tax refund processing fees and debit card interchange fees that are classified as other noninterest income. The Bank's service charge fees on deposit accounts increased in large part due to a higher volume of overdraft balances, contributing to an increase in non-sufficient fund fees of $76, or 12.0%, during the third quarter of 2008 and $185, or 10.5%, during the first nine months of 2008, as compared to the same periods in 2007.

Also contributing to noninterest revenue growth were earnings from bank owned life insurance ("BOLI"). Income earned on life insurance contracts from the Company's supplemental retirement program was up $27, or 15.6%, during the third quarter of 2008 and $61, or 11.8%, during the first nine months of 2008 as compared to the same periods in 2007. BOLI activity was impacted by additional investments in life insurance contracts purchased during the second quarter of 2008 and a higher earnings rate tied to such policies. The Company's average investment balance in BOLI through September 30, 2008 was $16,760, an increase of $519, or 3.2%, as compared to the same period in 2007.

To help manage consumer demand for longer-termed, fixed-rate real estate mortgages, the Company has taken additional opportunities to sell some real

estate loans to the secondary market. Through September 30, 2008, the Company has sold 96 loans totaling $10,480 to the secondary market as compared to 34 loans totaling $3,322 during the same period in 2007. While being down slightly by $3, or 13.0%, during the third quarter of 2008, the volume increase in loan sales has contributed to the year-to-date growth in income on sale of loans, which was up $28, or 34.1%, during the first nine months of 2008, as compared to the same periods in 2007.

Growth in noninterest income also came from a decrease in the loss on sale of OREO. This income was the result of higher OREO losses experienced in last year's 2007 second quarter, which were primarily the result of a loss incurred on the sale of one large commercial property during that time.

Also contributing to noninterest revenue growth were activities from other noninterest income sources. As mentioned previously, the Company began its participation in a new tax refund loan service in 2006 where it serves as a facilitator for the clearing of tax refunds for a tax software provider. The Company is one of a limited number of financial institutions throughout the U.S. that facilitates tax refunds through its relationship with this tax software provider. As a result of tax refund processing fee activity being mostly seasonal, there was no income recorded during the third quarters of 2008 and 2007. During the first nine months of 2008, the Company's tax refund processing fees increased by $161, or 146.7%, over the same period in 2007. Further enhancing growth in other noninterest income was debit card interchange income, increasing $34, or 25.1%, during the third quarter of 2008 and $82, or 20.4%, during the first nine months of 2008 as compared to the same periods in 2007. The volume of transactions utilizing the Company's Jeanie(R) Plus debit card continue to increase over a year ago. The Company's customers used their Jeanie(R) Plus debit cards to complete 981,230 transactions during the first nine months of 2008, up 12.8% from the 869,975 transactions during the same period in 2007, derived mostly from gasoline and restaurant purchases.

Partially offsetting growth in other noninterest income were quarterly and year-to-date decreases in the Company's rental income from OREO properties. Rental income from OREO properties totaled $97 and $126 for the third quarter and nine-month periods of 2007, respectively, as compared to no income recognized for the same periods in 2008. The 2007 rental income was primarily earned on one large commercial facility located in Kanawha County, West Virginia, that the Company eventually sold in December 2007.

The total of all remaining noninterest income categories remained relatively unchanged from the prior quarterly and year-to-date periods. The total growth in noninterest income demonstrates management's desire to leverage technology to enhance efficiency and diversify the Company's revenue sources.

22

Noninterest Expense

Noninterest expense during the third quarter of 2008 increased $395, or 7.1%, and increased $955, or 5.8%, during the first nine months of 2008 as compared to the same periods in 2007. Contributing to the growth in overhead expense were salaries and employee benefits, the Company's largest noninterest expense item, which increased $362, or 11.1%, for the third quarter of 2008 and $780, or 8.1%, during the first nine months of 2008 as compared to the same periods in 2007. The increases were largely due to higher accrued incentive costs, increased health insurance benefit expenses and a higher full-time equivalent ("FTE") employee base. The Company's FTE employees increased at September 30, 2008 to 266 employees on staff as compared to 253 employees at September 30, 2007.

Also increasing for the year were data processing expenses, which increased $81, or 12.9%, during the first nine months of 2008 as compared to the same period in

2007. The increase was due to the monthly costs incurred on the Bank's implementation of new technology to better serve the convenience of its customers, which technology includes ATM, debit and credit cards, as well as various online banking products, including net teller and bill pay. However, data processing expenses during the third quarter of 2008 decreased $45, or 20.4%, as compared to the same period in 2007. The decrease was due to the successful re-negotiation of the Bank's monthly data processing costs. The negotiations for lower monthly processing charges were finalized in the third quarter of 2008 and decreased the monthly data processing costs by $15 per month.

Overhead expenses were also impacted by occupancy, furniture and equipment costs, which increased $10, or 1.5%, during the third quarter of 2008 and $15, or 0.8%, during the first nine months of 2008, as compared to the same periods in 2007. This was in large part due to the addition of a new banking facility located within a hospital in Gallia County. This full service banking center was built during 2007 at a cost of over $371. This new facility investment serves as an additional market presence to service the banking needs of the medical staff and patients along the hospital's campus area. The facility was placed in service and depreciation commenced during the fourth quarter of 2007.

Also contributing to noninterest expense growth was the Company's FDIC expense, which was up $104, or 597.3%, during the third quarter of 2008 and $102, or 191.8%, during the first nine months of 2008, as compared to the same periods in 2007. This was in large part to the Company's share of a one-time assessment credit being fully utilized by June 30, 2008. With the elimination of this credit, the Company entered the third quarter of 2008 with its deposits being assessed at a rate close to 7 basis points. In early October 2008, the FDIC issued a proposed rule that would raise current deposit insurance assessment rates uniformly for all financial institutions for the first quarter of 2009, which would result in a premium increase of an additional 7 basis points. The proposed rule also provides for a new means of calculating deposit insurance during the second quarter of 2009, which includes an assessment of the financial institution's brokered deposit, secured liability and capital levels. As a result, the Company anticipates its cost of insuring deposits will more than double in 2009 from its already increasing levels in 2008.

Increases in the Company's marketing costs, up $1, or 0.3%, during the third quarter of 2008 and $86, or 18.5%, during the first nine months of 2008 as compared to the same periods in 2007, also contributed to the increases in noninterest expense. Marketing costs include advertising, donations and public relations activities. Various inflationary increases in other noninterest expenses also included supplies, forms, postage, telephone and other miscellaneous expenses during the quarterly and year-to-date periods presented. Partially offsetting these increases within other noninterest expense was a decrease in the Company's foreclosure expenses, which were down $25, or 34.1%, during the third quarter of 2008 and $244, or 86.6%, during the first nine months of 2008 as compared to the same periods in 2007. Management anticipates current year foreclosure costs to be below the costs incurred from 2007 due to the larger than normal volume of foreclosure costs that were incurred during 2007.

23

The Company's efficiency ratio is defined as noninterest expense as a percentage of fully tax-equivalent net interest income plus noninterest income. The emphasis management has placed on managing its balance sheet mix and interest rate sensitivity to help expand the net interest margin as well as developing more innovative ways to generate noninterest revenue has contributed to an improving efficiency ratio, finishing at 63.66% for the three months ended September 30, 2008 and 62.64% during the nine months ended September 30, 2008 as compared to 64.47% and 64.16% for the same periods in 2007.

Capital Resources

All of the Company's capital ratios exceeded the regulatory minimum guidelines as identified in the following table:

	Company Ratios		Regulatory
	9/30/08	12/31/07	Minimum
Tier 1 risk-based capital	12.3%	12.0%	4.00%
Total risk-based capital ratio	13.4%	13.1%	8.00%
Leverage ratio	9.5%	9.5%	4.00%

Cash dividends paid of $2,304 for the first nine months of 2008 represent a 4.6% increase over the cash dividends paid during the same period in 2007. The quarterly dividend rate increased from $0.18 per share in 2007 to $0.19 per share in 2008. The dividend rate has increased in proportion to the consistent growth in retained earnings. At September 30, 2008, approximately 82% of the Company's shareholders were enrolled in the Company's dividend reinvestment plan.

Liquidity

Liquidity relates to the Company's ability to meet the cash demands and credit needs of its customers and is provided by the ability to readily convert assets to cash and raise funds in the market place. Total cash and cash equivalents, interest-bearing deposits with other financial institutions, held-to-maturity securities maturing within one year and available-for-sale securities of $100,561 represented 12.9% of total assets at September 30, 2008. In addition, the FHLB offers advances to the Bank which further enhances the Bank's ability to meet liquidity demands. At September 30, 2008, the Bank could borrow an additional $63,000 from the FHLB. The Bank also has the ability to purchase federal funds from several of its correspondent banks. For further cash flow information, see the condensed consolidated statement of cash flows contained in this Form 10-Q. Management does not rely on any single source of liquidity and monitors the level of liquidity based on many factors affecting the Company's financial condition.

Off-Balance Sheet Arrangements

As discussed in Note 5 - Concentrations of Credit Risk and Financial Instruments with Off-Balance Sheet Risk, the Company engages in certain off-balance sheet credit-related activities, including commitments to extend credit and standby letters of credit, which could require the Company to make cash payments in the event that specified future events occur. Commitments to extend credit are agreements to lend to a customer as long as there is no violation of any condition established in the contract. Commitments generally have fixed expiration dates or other termination clauses and may require payment of a fee. Standby letters of credit are conditional commitments to guarantee the performance of a customer to a third party. While these commitments are necessary to meet the financing needs of the Company's customers, many of these commitments are expected to expire without being drawn upon. Therefore, the total amount of commitments does not necessarily represent future cash requirements.

24

Critical Accounting Policies

The most significant accounting policies followed by the Company are presented

in Note 1 to the consolidated financial statements. These policies, along with the disclosures presented in the other financial statement notes, provide information on how significant assets and liabilities are valued in the financial statements and how those values are determined. Management views critical accounting policies to be those that are highly dependent on subjective or complex judgments, estimates and assumptions, and where changes in those estimates and assumptions could have a significant impact on the financial statements. Management currently views the adequacy of the allowance for loan losses to be a critical accounting policy.

Allowance for loan losses: To arrive at the total dollars necessary to maintain an allowance level sufficient to absorb probable losses incurred at a specific financial statement date, management has developed procedures to establish and then evaluate the allowance once determined. The allowance consists of the following components: specific allocation, general allocation and other estimated general allocation.

To arrive at the amount required for the specific allocation component, the Company evaluates loans for which a loss may be incurred either in part or whole. To achieve this task, the Company has created a quarterly report ("Watchlist") which lists the loans from each loan portfolio that management deems to be potential credit risks. The criteria to be placed on this report are: past due 60 or more days, nonaccrual and loans management has determined to be potential problem loans. These loans are reviewed and analyzed for potential loss by the Large Loan Review Committee, which consists of the President of the Company and members of senior management with lending authority. The function of the Committee is to review and analyze large borrowers for credit risk, scrutinize the Watchlist and evaluate the adequacy of the allowance for loan losses and other credit related issues. The Committee has established a grading system to evaluate the credit risk of each commercial borrower on a scale of 1 (least risk) to 10 (greatest risk). After the Committee evaluates each relationship listed in the report, a specific loss allocation may be assessed. The specific allocation is currently made up of amounts allocated to the commercial and real estate loan portfolios.

Included in the specific allocation analysis are impaired loans, which consist of loans with balances of $200 or more on nonaccrual status or non-performing in nature. These loans are also individually analyzed and a specific allocation may be assessed based on expected credit loss. Collateral dependent loans will be evaluated to determine a fair value of the collateral securing the loan. Any changes in the impaired allocation will be reflected in the total specific allocation.

The second component (general allowance) is based upon total loan portfolio balances minus loan balances already reviewed (specific allocation). The Large Loan Review Committee evaluates credit analysis reports that provide management with a "snapshot" of information on borrowers with larger-balance loans (aggregate balances of $1,000 or greater), including loan grades, collateral values, and other factors. A list is prepared and updated quarterly that allows management to monitor this group of borrowers. Therefore, only small balance commercial loans and homogeneous loans (consumer and real estate loans) are not specifically reviewed to determine minor delinquencies, current collateral values and present credit risk. The Company utilizes actual historic loss experience as a factor to calculate the probable losses for this component of the allowance for loan losses. This risk factor reflects a three-year performance evaluation of credit losses per loan portfolio. The risk factor is achieved by taking the average net charge-off per loan portfolio for the last 36 consecutive months and dividing it by the average loan balance for each loan portfolio over the same time period. The Company believes that by using the 36 month average loss risk factor, the estimated allowance will more accurately reflect current probable losses.

The final component used to evaluate the adequacy of the allowance includes five additional areas that

management believes can have an impact on collecting all principal due. These areas are: 1) delinquency trends, 2) current local economic conditions, 3) non-performing loan trends, 4) recovery vs. charge-off, and 5) personnel changes. Each of these areas is given a percentage factor, from a low of 10% to a high of 30%, determined by the degree of impact it may have on the allowance. To calculate the impact of other economic conditions on the allowance, the total general allowance is multiplied by this factor. These dollars are then added to the other two components to provide for economic conditions in the Company's assessment area. The Company's assessment area takes in a total of ten counties in Ohio and West Virginia. Each assessment area has its individual economic conditions; however, the Company has chosen to average the risk factors for compiling the economic risk factor.

The adequacy of the allowance may be determined by certain specific and nonspecific allocations; however, the total allocation is available for any credit losses that may impact the loan portfolios.

Concentration of Credit Risk

The Company maintains a diversified credit portfolio, with residential real estate loans currently comprising the most significant portion. Credit risk is primarily subject to loans made to businesses and individuals in central and southeastern Ohio as well as western West Virginia. Management believes this risk to be general in nature, as there are no material concentrations of loans to any industry or consumer group. To the extent possible, the Company diversifies its loan portfolio to limit credit risk by avoiding industry concentrations.

ITEM 3. QUANTITATIVE AND QUALITATIVE DISCLOSURES ABOUT MARKET RISK

The Company's goal for interest rate sensitivity management is to maintain a balance between steady net interest income growth and the risks associated with interest rate fluctuations. Interest rate risk ("IRR") is the exposure of the Company's financial condition to adverse movements in interest rates. Accepting this risk can be an important source of profitability, but excessive levels of IRR can threaten the Company's earnings and capital.

The Company evaluates IRR through the use of an earnings simulation model to analyze net interest income sensitivity to changing interest rates. The modeling process starts with a base case simulation, which assumes a flat interest rate scenario. The base case scenario is compared to rising and falling interest rate scenarios assuming a parallel shift in all interest rates. Comparisons of net interest income and net income fluctuations from the flat rate scenario illustrate the risks associated with the projected balance sheet structure.

The Company's Asset/Liability Committee monitors and manages IRR within Board approved policy limits. The current IRR policy limits anticipated changes in net interest income to an instantaneous increase or decrease in market interest rates over a 12 month horizon to +/- 5% for a 100 basis point rate shock, +/- 7.5% for a 200 basis point rate shock and +/- 10% for a 300 basis point rate shock.

The following table presents the Company's estimated net interest income sensitivity:

September 30, 2008	Decem

Change in Interest Rates in Basis Points	Percentage Change in Net Interest Income	Percent Net In
+300	(2.39%)	(
+200	(1.66%)	(
+100	(1.02%)	(
-100	1.77%	
-200	3.04%	
-300	4.60%	

The estimated percentage change in net interest income due to a change in interest rates was within the policy guidelines established by the Board. At September 30, 2008, the Company's analysis of net interest income reflects a liability sensitive position. Based on current assumptions, an instantaneous decrease in interest rates would positively impact net interest income primarily due to the duration of earning assets exceeding the duration of interest-bearing liabilities. As compared to December 31, 2007, the Company's interest rate risk profile has become less liability sensitive primarily due to the influx of liquidity and to the extension of maturity terms offered on new time deposits. Since September 2007, the Federal Reserve has reduced short-term interest rates 425 basis points and the Company's net interest margin has responded positively to the decline in market rates.

ITEM 4. CONTROLS AND PROCEDURES

Evaluation of Disclosure Controls and Procedures

With the participation of the President and Chief Executive Officer (the principal executive officer) and the Vice President and Chief Financial Officer (the principal financial officer) of Ohio Valley, Ohio Valley's management has evaluated the effectiveness of Ohio Valley's disclosure controls and procedures (as defined in Rule 13a-15(e) under the Securities Exchange Act of 1934, as amended (the "Exchange Act")) as of the end of the quarterly period covered by this Quarterly Report on Form 10-Q. Based on that evaluation, Ohio Valley's President and Chief Executive Officer and Vice President and Chief Financial Officer have concluded that Ohio Valley's disclosure controls and procedures are effective as of the end of the quarterly period covered by this Quarterly Report on Form 10-Q to ensure that information required to be disclosed by Ohio Valley in the reports that it files or submits under the Exchange Act is recorded, processed, summarized and reported within the time periods specified in the Securities and Exchange Commission's rules and forms. Disclosure controls and procedures include, without limitation, controls and procedures designed to ensure that information required to be disclosed by Ohio Valley in the reports that it files or submits under the Exchange Act is accumulated and communicated to Ohio Valley's management, including its principal executive officer and principal financial officer, as appropriate to allow timely decisions regarding required disclosure.

Changes in Internal Control over Financial Reporting

There was no change in Ohio Valley's internal control over financial reporting (as defined in Rule 13a-15(f) under the Exchange Act) that occurred during Ohio Valley's fiscal quarter ended September 30, 2008, that has materially affected, or is reasonably likely to materially affect, Ohio Valley's internal control over financial reporting.

PART II - OTHER INFORMATION

ITEM 1. LEGAL PROCEEDINGS

There are no material pending legal proceedings to which Ohio Valley or any of its subsidiaries is a party, other than ordinary, routine litigation incidental to their respective businesses. In the opinion of Ohio Valley's management, these proceedings should not, individually or in the aggregate, have a material effect on Ohio Valley's results of operations or financial condition.

ITEM 1A. RISK FACTORS

You should carefully consider the risk factors discussed in Part I, "Item 1A. Risk Factors" in Ohio Valley's Annual Report on Form 10-K for the year ended December 31, 2007, as filed with the U.S. Securities and Exchange Commission on March 17, 2008 and available at www.sec.gov. These risk factors could materially affect the Company's business, financial condition or future results. The risk factors described in the Annual Report on Form 10-K are not the only risks facing the Company.

27

Additional risks and uncertainties not currently known to the Company or that management currently deems to be immaterial also may materially adversely affect the Company's business, financial condition and/or operating results.

In addition to these factors, the following risk factors should be considered when evaluating the Company's results of operations and financial condition:

Difficult conditions in the financial markets may adversely affect our business and results of operations.

Our financial performance depends on the quality of loans in our portfolio. That quality may be adversely affected by several factors, including underwriting procedures, collateral quality or geographic or industry conditions, as well as the recent deterioration in the financial markets. Many lenders and institutional investors have reduced and, in some cases, ceased to provide funding to borrowers, including other financial institutions. This market turmoil and tightening of credit have led to an increased level of commercial and consumer delinquencies and defaults, lack of consumer confidence, increased market volatility and widespread reduction of business activity. In addition, our credit risk may be increased when our collateral cannot be sold or is sold at prices not sufficient to recover the full amount of the loan balance. Deterioration in our ability to collect our loans receivable may adversely affect our profitability and financial condition.

Federal and state governments could adopt laws responsive to the current credit conditions that would adversely affect our ability to collect on loans.

Federal or state governments might adopt legislation or regulations reducing the amount that our customers are required to pay under existing loan contracts or limit our ability to foreclose on collateral.

FDIC insurance premiums may increase materially.

The FDIC insures deposits at FDIC insured financial institutions, including the Bank. The FDIC charges the insured financial institutions premiums to maintain the Deposit Insurance Fund at a certain level. Current economic conditions have increased bank failures and expectations for further failures, in which case the FDIC ensures payments of deposits up to insured limits from the Deposit Insurance Fund. In October 2008, the FDIC issued a proposed rule that would increase premiums paid by insured institutions and make other changes to the assessment system. Increases in deposit insurance premiums could adversely affect our net income.

In addition, the FDIC has adopted the Temporary Liquidity Guarantee Program, pursuant to which it provides unlimited insurance on deposits in noninterest-bearing transaction accounts not otherwise covered by the existing deposit insurance limit of $250,000. After the initial 30 days of coverage for all insured institutions choosing to participate, any institution wishing to participate will pay a 10 basis point surcharge on the insured deposits. The Company has chosen to participate. Such participation will increase our expenses and decrease net income.

Concern of customers over deposit insurance may cause a decrease in deposits at the Bank.

With recent increased concerns about bank failures, customers increasingly are concerned about the extent to which their deposits are insured by the FDIC. Customers may withdraw deposits from the Bank in an effort to ensure that the amount they have on deposit at the Bank is fully insured. Decreases in deposits may adversely affect our funding costs and net income.

ITEM 2. UNREGISTERED SALES OF EQUITY SECURITIES AND USE OF PROCEED

(a) Not Applicable.

(b) Not Applicable.

(c) The following table provides information regarding Ohio Valley's repurchases of its common shares during the fiscal quarter ended September 30, 2008:

ISSUER REPURCHASES OF EQUITY SECURITIES(1)

Period	Total Number of Common Shares Purchased	Average Price Paid per Common Share	Total Number of Shares Purchased as Part of Publicly Announced Plans or Programs	Maxim of Shar Yet Be Under Announ Pr
July 1 - 31, 2008	17,000	$25.10	17,000	1
August 1 - 31, 2008	10,000	$24.18	10,000	1
September 1 - 30, 2008	10,500	$21.55	10,500	
TOTAL	37,500	$23.86	37,500	

(1) On January 15, 2008, Ohio Valley's Board of Directors announced its plan to repurchase up to 175,000 of its common shares between February 16, 2008 and February 15, 2009.
