Free Writing Prospectus relating to Preliminary Terms No. 1,069

Morgan Stanley Finance LLC Registration Statement Nos. 333-221595; 333-221595-01

Dated October 5, 2018

Filed pursuant to Rule 433

Structured Investments

Contingent Income Auto-Callable Securities due October 29, 2021, with 6-Month Initial Non-Call Period

All Payments on the Securities Based on the Worst Performing of the Russell 2000[®] Index, the S&P 500[®] Index and the EURO STOXX 50[®] Index

This document provides a summary of the terms of the securities offered by Morgan Stanley Finance LLC. Investors should review carefully the accompanying preliminary terms, product supplement, index supplement and prospectus prior to making an investment decision.

SUMMARY TERMS

Issuer: Morgan Stanley Finance LLC (“MSFL”)
Guarantor: Morgan Stanley
Underlying indices: Russell 2000[®] Index (the “RTY Index”), S&P 500 Index (the “SPX Index”) and EURO STOXX 50 Index (the “SX5E Index”). For more information about the underlying indices, see the accompanying preliminary terms.
Aggregate principal amount: \$1,000 per security
Pricing date: October 26, 2018
Original issue date: October 31, 2018 (3 business days after the pricing date)
Maturity date: October 29, 2021
Contingent quarterly coupon: A *contingent* coupon will be paid on the securities on each coupon payment date **but only if** the index closing value of each underlying index is at or above its respective **coupon threshold level** on the related observation date. If payable, the contingent quarterly coupon will be an amount in cash per stated principal amount corresponding to a return of between 6.00% and 8.00% *per annum* for each interest payment period for each applicable observation date. The actual contingent quarterly coupon rate will be determined on the pricing date.
Payment at maturity: **If, on any observation date, the index closing value of any underlying index is less than its respective coupon threshold level, we will pay no coupon for the applicable quarterly period. It is possible that any underlying index will remain below its respective coupon threshold level for extended periods of time or even throughout the entire 3-year term of the securities so that you will receive few or no contingent quarterly coupons.** If the securities have not been automatically redeemed prior to maturity, the payment at maturity will be determined as follows:

If the final index value of **each** underlying index is **greater than or equal to** its respective downside threshold level, investors will receive the stated principal amount and the contingent quarterly coupon with respect to the final observation date.

If the final index value of any underlying index is **less than** its respective downside threshold level, investors will receive (i) the stated principal amount multiplied by (ii) the index performance factor of the worst performing underlying index.

Agent: Morgan Stanley & Co. LLC, an affiliate of MSFL and a wholly owned subsidiary of Morgan Stanley. See “Supplemental information regarding plan of distribution; conflicts of interest” in the accompanying preliminary terms. The agent commissions will be as set forth in the final pricing supplement.

Estimated value on the pricing date: Approximately \$957.80 per security, or within \$22.50 of that estimate. See “Investment Summary” in the accompanying preliminary terms.

Terms continued on the following page

Overview

The securities offered are unsecured obligations of MSFL and are fully and unconditionally guaranteed by Morgan Stanley. The securities have the terms described in the accompanying preliminary terms, product supplement, index supplement and prospectus. The securities do not guarantee the repayment of principal and do not provide for the regular payment of interest. Instead, the securities will pay a contingent quarterly coupon **but only if** the index closing value of **each** of the Russell 2000[®] Index, the S&P 500[®] Index **and** the EURO STOXX 50[®] Index is **at or above 70%** of its respective initial index value, which we refer to as the respective **coupon threshold level**, on the related observation date. However, if the index closing value of **any** underlying index is **less than its coupon threshold level** on any observation date, we will pay no interest for the related quarterly period. In addition, starting six months after the original issue date, the securities will be automatically redeemed if the index closing value of **each** underlying index is **greater than or equal to** its respective **initial index value** on any quarterly redemption determination date, for the early redemption payment equal to the sum of the stated principal amount plus the related contingent quarterly coupon. No further payments will be made on the securities once they have been redeemed. At maturity, if the securities have not previously been redeemed and the final index value of **each** underlying index is **greater than or equal to 70%** of its respective initial index value, which we refer to as the respective downside threshold level, the payment at maturity will be the stated principal amount and the related contingent quarterly coupon. If, however, the final index value of **any** underlying index is **less than** its respective downside threshold level, investors will be fully exposed to the decline in the worst performing underlying index on a 1-to-1 basis and will receive a payment at maturity that is **less than 70%** of the stated principal amount of the securities and could be zero. **Accordingly, investors in the securities must be willing to accept the risk of losing their entire initial investment and also the risk of not receiving any contingent quarterly coupons throughout the 3-year term of the securities.** Because all payments on the securities are based on the worst performing of the underlying indices, a decline beyond the respective coupon threshold level or respective downside threshold level, as applicable, of any underlying index will result in few or no contingent coupon payments or a significant loss of your investment, even if one or both of the other underlying indices have appreciated or have not declined as much. The securities are for investors who are willing to risk their principal based on the worst performing of three underlying indices and who seek an opportunity to earn interest at a potentially above-market rate in exchange for the risk of receiving no quarterly coupons over the entire 3-year term, with no possibility of being called out of the securities until after the initial 6-month non-call period. Investors will not participate in any appreciation of any underlying index. The securities are notes issued as part of MSFL’s Series A Global Medium-Term Notes program.

All payments are subject to our credit risk. If we default on our obligations, you could lose some or all of your investment. These securities are not secured obligations and you will not have any security interest in, or otherwise have any access to, any underlying reference asset or assets.

Investing in the securities involves risks. See “Selected Risks” on the following page and “Risk Factors” in the accompanying preliminary terms.

You should read this document together with the accompanying preliminary terms, product supplement, index supplement and prospectus describing the offering before you decide to invest. You may access the preliminary terms through the below link:

https://www.sec.gov/Archives/edgar/data/895421/000095010318011533/dp96472_fwp-ps1069.htm

Terms continued from previous page:

	<p>The securities are not subject to automatic early redemption until six months after the original issue date. Following this initial 6-month non-call period, if, on any redemption determination date, beginning on April 26, 2019, the index closing value of each underlying index is greater than or equal to its respective initial index value, the securities will be automatically redeemed for an early redemption payment on the related early redemption date. No further payments will be made on the securities once they have been redeemed.</p>
Early redemption:	
	<p>The securities will not be redeemed early on any early redemption date if the index closing value of either underlying index is below the respective initial index value for such underlying index on the related redemption determination date.</p>
Early redemption payment:	The early redemption payment will be an amount equal to the stated principal amount for each security you hold plus the contingent quarterly coupon with respect to the related observation date.
Redemption determination dates:	Quarterly, as set forth under “Observation Dates, Redemption Determination Dates, Coupon Payment Dates and Early Redemption Dates” in the accompanying preliminary terms, subject to postponement for non-index business days and certain market disruption events. Beginning on May 1, 2019, quarterly. See “Observation Dates, Redemption Determination Dates, Coupon Payment Dates and Early Redemption Dates” in the accompanying preliminary terms. If any such day is not a business day, that early redemption payment will be made on the next succeeding business day and no adjustment will be made to any early redemption payment made on that succeeding business day.
Early redemption dates:	With respect to the RTY Index: 70% of its initial index value
Coupon barrier level:	With respect to the SPX Index: 70% of its initial index value With respect to the SX5E Index: 70% of its initial index value With respect to the RTY Index: 70% of its initial index value
Downside threshold level:	With respect to the SPX Index: 70% of its initial index value With respect to the SX5E Index: 70% of its initial index value With respect to the RTY Index: its index closing value on the pricing date
Initial index value:	With respect to the SPX Index: its index closing value on the pricing date With respect to the SX5E Index: its index closing value on the pricing date
Final index value:	With respect to each index, the respective index closing value on the final observation date
Worst performing underlying Index performance factor:	The underlying index with the largest percentage decrease from the respective initial index value to the respective final index value Final index value <i>divided by</i> the initial index value
Coupon payment dates:	Quarterly, as set forth under “Observation Dates, Redemption Determination Dates, Coupon Payment Dates and Early Redemption Dates” in the accompanying preliminary terms; <i>provided</i> that if any such day is not a business day, that coupon payment will be made on the next succeeding business day and no adjustment will be made to any coupon payment made on that succeeding

business day. The contingent quarterly coupon, if any, with respect to the final observation date will be paid on the maturity date

Observation dates:

Quarter, as set forth under “Observation Dates, Redemption Determination Dates, Coupon Payment Dates and Early Redemption Dates” in the accompanying preliminary terms, subject to postponement for non-index business days and certain market disruption events. We also refer to the observation date immediately prior to the scheduled maturity date as the final observation date.

CUSIP / ISIN: 61768DGW9 / US61768DGW92

Listing: The securities will not be listed on any securities exchange.

The issuer has filed a registration statement (including a prospectus) with the SEC for the offering to which this communication relates. Before you invest, you should read the prospectus in that registration statement and other documents the issuer has filed with the SEC for more complete information about the issuer and this offering. You may get these documents for free by visiting EDGAR on the SEC Web site at www.sec.gov. Alternatively, the issuer, any underwriter or any dealer participating in the offering will arrange to send you the prospectus if you request it by calling toll-free 1-800-584-6837.

Risk Considerations

The risks set forth below are discussed in more detail in the “Risk Factors” section in the accompanying preliminary terms. Please review those risk factors carefully prior to making an investment decision.

The securities do not guarantee the return of any principal.

The securities do not provide for the regular payment of interest.

You are exposed to the price risk of each underlying index, with respect to both the contingent quarterly coupons, if any, and the payment at maturity, if any.

Because the securities are linked to the performance of the worst performing underlying index, you are exposed to greater risks of receiving no contingent quarterly coupons and sustaining a significant loss on your investment than if the securities were linked to just one index.

The contingent quarterly coupon, if any, is based on the value of each underlying index on only the related quarterly observation date at the end of the related interest period.

Investors will not participate in any appreciation in any underlying index.

The market price will be influenced by many unpredictable factors.

The securities are subject to our credit risk, and any actual or anticipated changes to our credit ratings or credit spreads may adversely affect the market value of the securities.

As a finance subsidiary, MSFL has no independent operations and will have no independent assets.

The securities are linked to the Russell 2000[®] Index and are subject to risks associated with small-capitalization companies.

There are risks associated with investments in securities linked to the value of foreign equity securities.

Not equivalent to investing in the underlying indices.

Reinvestment risk.

Edgar Filing: MORGAN STANLEY - Form FWP

The securities will not be listed on any securities exchange and secondary trading may be limited. Accordingly, you should be willing to hold your securities for the entire 3-year term of the securities.

The rate we are willing to pay for securities of this type, maturity and issuance size is likely to be lower than the rate implied by our secondary market credit spreads and advantageous to us. Both the lower rate and the inclusion of costs associated with issuing, selling, structuring and hedging the securities in the original issue price reduce the economic terms of the securities, cause the estimated value of the securities to be less than the original issue price and will adversely affect secondary market prices.

The estimated value of the securities is determined by reference to our pricing and valuation models, which may differ from those of other dealers and is not a maximum or minimum secondary market price.

- Hedging and trading activity by our affiliates could potentially affect the value of the securities.

The calculation agent, which is a subsidiary of Morgan Stanley and an affiliate of MSFL, will make determinations with respect to the securities.

- Adjustments to the underlying indices could adversely affect the value of the securities.

- The U.S. federal income tax consequences of an investment in the securities are uncertain.

Tax Considerations

You should review carefully the discussion in the accompanying preliminary terms under the caption “Additional Information About the Securities– Tax considerations” concerning the U.S. federal income tax consequences of an investment in the securities. However, you should consult your tax adviser regarding all aspects of the U.S. federal income tax consequences of an investment in the securities, as well as any tax consequences arising under the laws of any state, local or non-U.S. taxing jurisdiction.

Hypothetical Examples

The following hypothetical examples illustrate how to determine whether a contingent quarterly coupon is paid with respect to an observation date and how to calculate the payment at maturity, if any, if the securities have not been automatically redeemed early. The following examples are for illustrative purposes only. Whether you receive a contingent quarterly coupon will be determined by reference to the index closing value of each underlying index on each quarterly observation date, and the amount you will receive at maturity, if any, will be determined by reference to the final index value of each underlying index on the final observation date. The actual initial index value, coupon barrier level and downside threshold level for each underlying index will be determined on the pricing date. All payments on the securities, if any, are subject to our credit risk. The numbers in the hypothetical examples below may have been rounded for the ease of analysis. The below examples are based on the following terms:

Hypothetical Contingent Quarterly Coupon:	7.00% per annum (corresponding to approximately \$17.50 per month per security, the midpoint of the range set forth on the cover of this document)*
Stated Principal Amount:	\$1,000 With respect to the RTY Index: 1,200
Hypothetical Initial Index Value:	With respect to the SPX Index: 2,500 With respect to the SX5E Index: 3,000 With respect to the RTY Index: 840, which is 70% of the hypothetical initial index value for such index
Hypothetical Coupon Barrier Level:	With respect to the SPX Index: 1,750, which is 70% of the hypothetical initial index value for such index With respect to the SX5E Index: 2,100, which is 70% of the hypothetical initial index value for such index With respect to the RTY Index: 840, which is 70% of the hypothetical initial index value for such index
Hypothetical Downside Threshold Level:	With respect to the SPX Index: 1,750, which is 70% of the hypothetical initial index value for such index With respect to the SX5E Index: 2,100, which is 70% of the hypothetical initial index value for such index

* The actual contingent quarterly coupon will be an amount determined by the calculation agent based on the actual contingent quarterly coupon rate and the actual number of days in the applicable payment period, calculated on a 30/360 basis. The hypothetical contingent quarterly coupon of \$17.50 is used in these examples for ease of analysis.

How to determine whether a contingent quarterly coupon is payable with respect to an observation date:

	Index Closing Value			Contingent Quarterly Coupon
	RTY Index	SPX Index	SX5E Index	
Hypothetical Observation Date 1	1,750 (at or above the coupon threshold level)	2,800 (at or above the coupon threshold level)	3,200 (at or above the coupon threshold level)	\$17.50

Edgar Filing: MORGAN STANLEY - Form FWP

Hypothetical Observation Date 2	800 (below the coupon threshold level)	1,950 (at or above the coupon threshold level)	3,200 (at or above the coupon threshold level)	\$0
Hypothetical Observation Date 3	1,400 (at or above the coupon threshold level)	900 (below the coupon threshold level)	2,200 (below the coupon threshold level)	\$0
Hypothetical Observation Date 4	700 (below the coupon threshold level)	800 (below the coupon threshold level)	1,800 (below the coupon threshold level)	\$0

On hypothetical observation date 1, each underlying index closes at or above its respective coupon threshold level. Therefore, a contingent quarterly coupon of \$17.50 is paid on the relevant coupon payment date.

On each of hypothetical observation dates 2 and 3, at least one underlying index closes at or above its respective coupon threshold level, but one or both of the other underlying indices close below their respective coupon threshold levels. Therefore, no contingent quarterly coupon is paid on the relevant coupon payment date.

On hypothetical observation date 4, each underlying index closes below its respective coupon threshold level, and, accordingly, no contingent quarterly coupon is paid on the relevant coupon payment date.

If the index closing value of any underlying index is less than its respective coupon threshold level on each observation date, you will not receive any contingent quarterly coupons for the entire 3-year term of the securities.

How to calculate the payment at maturity (if the securities have not been automatically redeemed):

Starting after six months, if the index closing value of each underlying index is greater than or equal to its initial index value on any quarterly redemption determination date, the securities will be automatically redeemed for an early redemption payment equal to the stated principal amount for each security you hold plus the contingent quarterly coupon with respect to the related observation date.

The examples below illustrate how to calculate the payment at maturity if the securities have not been automatically redeemed prior to maturity.

	Final Index Value RTY Index	SPX Index	SX5E Index	Payment at Maturity
Example 1:	540 (below the downside threshold level)	1,500 (below the downside threshold level)	2,500 (at or above the downside threshold level)	\$1,000 x index performance factor of the worst performing underlying index = $\$1,000 \times (540 / 1,200) = \450
Example 2:	1,200 (at or above the downside threshold level)	2,000 (at or above the downside threshold level)	1,200 (below the downside threshold level)	$\$1,000 \times (1,200 / 3,000) = \400
Example 3:	540 (below the downside threshold level)	1,500 (below the downside threshold level)	900 (below the downside threshold level)	$\$1,000 \times (900 / 3,000) = \300
Example 4:	360 (below the threshold level)	1,000 (below the threshold level)	1,200 (below the downside threshold level)	$\$1,000 \times (360 / 1,200) = \300
Example 5:	1,300 (at or above the downside threshold level)	3,000 (at or above the downside threshold level)	3,300 (at or above the downside threshold level)	The stated principal amount + the contingent quarterly coupon with respect to the final observation

date.

For more information, please see above under “How to determine whether a contingent quarterly coupon is payable with respect to an observation date.”

For more information, please see above under “How to determine whether a contingent quarterly coupon is payable with respect to an observation date.”

In examples 1 and 2, the final index value(s) of one or two of the underlying indices are at or above the respective downside threshold level(s), but the final index value(s) of one or both of the other underlying indices are below the respective downside threshold level(s). Therefore, investors are exposed to the downside performance of the worst performing underlying index at maturity and receive at maturity an amount equal to the stated principal amount multiplied by the index performance factor of the worst performing underlying index. Moreover, investors do not receive any contingent quarterly coupon for the final quarterly period.

Similarly, in examples 3 and 4, the final index value of each underlying index is below its respective downside threshold level, and investors receive at maturity an amount equal to the stated principal amount times the index performance factor of the worst performing underlying index. In example 3, the RTY Index has declined 55% from its initial index value to its final index value, the SPX Index has declined 40% from its initial index value to its final index value and the SX5E Index has declined 70% from its initial index value to its final index value. Therefore, the payment at maturity equals the stated principal amount multiplied by the index performance factor of the SX5E Index, which is the worst performing underlying index in this example. In example 4, the RTY Index has declined 70% from its initial index value to its final index value, the SPX Index has declined 60% from its initial index value to its final index value and the SX5E Index has declined 60% from its initial index value. Therefore, the payment at maturity equals the stated principal amount times the index performance factor of the RTY Index, which is the worst performing underlying index in this example. Moreover, investors do not receive the contingent quarterly coupon for the final quarterly period.

In example 5, the final index value of each underlying index is at or above its respective downside threshold level. Therefore, investors receive at maturity the stated principal amount of the securities plus the contingent quarterly coupon with respect to the final observation date. However, investors do not participate in any appreciation of the underlying indices.

If the final index value of ANY underlying index is below its respective downside threshold level, you will be exposed to the downside performance of the worst performing underlying index at maturity, and your payment at maturity will be less than \$700 per security and could be zero.

Russell 2000® Index Historical Performance

The following graph sets forth the daily index closing values of the Russell 2000® Index for each quarter in the period from January 1, 2013 through September 28, 2018. You should not take the historical values of the Russell 2000® Index as an indication of its future performance, and no assurance can be given as to the index closing value of the Russell 2000® Index on the valuation date.
