

BOWATER INC
Form ARS
March 27, 2003

Edgar Filing: BOWATER INC - Form ARS

Bowater Incorporated, headquartered in Greenville, SC, is a global leader in newsprint. In addition, the company makes coated and uncoated groundwood papers, bleached kraft pulp and lumber products. The company has 12 pulp and paper mills in the United States, Canada and South Korea and 12 North American sawmills that produce softwood and hardwood lumber. Bowater also operates two facilities that convert a groundwood base sheet to coated products. Bowater's operations are supported by approximately 1.5 million acres of timberlands owned or leased in the United States and Canada and 32 million acres of timber cutting rights in Canada. Bowater is one of the world's largest consumers of recycled newspapers and magazines. Bowater common stock is listed on the New York Stock Exchange, U.S. regional exchanges and the London Stock Exchange. A special class of stock exchangeable into Bowater common stock is listed on the Toronto Stock Exchange (TSE: BWX).

Shareholder Information	IBC

Financial Performance

For 2002, Bowater had a net loss of \$142.4 million, or \$2.50 per diluted share, which includes \$51.3 million, or a \$.90 per share gain relating to asset sales, and \$1.6 million, or \$.03 per diluted share resulting from foreign currency gains. Before these two items, the net loss was \$195.3 million, or \$3.43 per diluted share. This compares with a net loss of \$6.5 million, or \$.12 per share in 2001, excluding asset sales and currency losses.

During the year, we generated \$41.2 million in operating cash flow, spent \$238.7 million on capital projects and paid \$49.6 million in dividends. We also raised \$114.6 million through the sale of timberlands. We took the opportunity in 2002 to renegotiate our primary bank facility and extend its final maturity to 2005. At year-end we had \$480 million of unused available bank lines. Our debt ratio at year-end was 55%, which is higher than our target. This was primarily due to the impact of a change in the funded status of our pension plans. Debt reduction is our top priority, and we expect to make meaningful progress as market conditions for our products improve.

Your management team responded vigorously to difficult business conditions by:

Implementing a companywide austerity program that lowered our costs by approximately \$75 million.

Completing the integration of Alliance Forest Products resulting in \$80 million of synergies and exceeding our \$60 million target.

Further optimizing our asset base by permanently closing a 90,000 metric ton newsprint machine at Coosa Pines, Alabama, and announcing the elimination of 100,000 metric tons of newsprint production mostly at our Calhoun mill.

Realizing \$114.6 million of proceeds from the sale of timberlands.

The \$75 million cost reduction program includes a work force reduction of 500 employees. By the end of 2002 we had implemented 40% of the personnel reductions. We will achieve the balance of the cost reduction program in 2003 while maintaining the salary freezes we initiated in 2002. These were very difficult but necessary decisions. In the context of the reductions, it would have been easy for our operating management to lose their focus. I am happy to say they did not, and our productivity and safety performance remains outstanding. Our product mix continued to improve through the start-up of the coated paper converting facility in Tennessee and the expansion of our specialty papers business.

Difficult conditions provide an opportunity for strong managers to add value. In 2002, we expanded the responsibilities of Don Newman who was appointed Executive Vice President and Chief Operating Officer and David Maffucci who was appointed Executive Vice President in charge of most staff functions. Jerry Gilmore, Senior Vice President Newsprint Operations, assumed more mill responsibilities. Roger Loney became manager of our Calhoun mill, Bruce Nunn became manager of our Mersey

At Bowater, we manage capital spending carefully and have a track record of spending less than depreciation.

Cost Reduction per Metric Ton 2001-2002

One of the hallmarks of our management team is cost reduction. We have a cost control focus and a proven ability to take out costs aggressively.

Cash Flow Generation Potential
in millions except earnings per share

	For Every \$50 Change in Price		
	EBITDA	Net Income	EPS
Newsprint	\$ 138.6	\$81.7	\$ 1.43
Market Pulp	\$ 62.1	\$38.5	\$0.67
Coated & Specialties	\$ 74.9	\$46.4	\$0.81

Our operating leverage to our core products provides significant cash flow generation potential.

Edgar Filing: BOWATER INC - Form ARS

mill, Alan Sanders took over the helm at the Ponderay mill, and Craig Stevens was named to lead the Nuway operations. With these promotions, I am pleased with the depth and experience of our entire management team.

Markets

2002 was a poor year for newspaper advertising in the United States. Although conditions improved in the latter half of the year, we continued to match newsprint production with customer demand and curtailed production by 400,000 metric tons. However, in the third quarter we implemented a newsprint price increase and expect better results in 2003 as demand for newsprint improves.

In 2002, demand for coated groundwood papers in North America increased by 5% as compared to 2001. Demand for this grade in North America in the last six months of 2002 was 13% greater than 2001. The growth in demand in the latter half of 2002 was unexpectedly strong, underscoring the positive long-term fundamentals of the coated groundwood marketplace. This sharp rebound makes the conversion of a newsprint machine at our Catawba mill to coated groundwood in 2003 especially timely. Although pricing remained at depressed levels throughout 2002, I expect improved demand and financial results in this sector in 2003.

In 2002, the demand for market pulp improved, and Norscan shipments were 5% higher than 2001. Norscan producer inventories ended the year at 1.6 million metric tons, down from 1.7 million metric tons at the end of 2001. The improvement in demand and reduced inventories, combined with a weakening U.S. dollar, set the stage for a significant improvement in the pulp market in 2003.

Lumber markets were weak in 2002, as excess production was fostered by the countervailing and anti-dumping duties imposed by the U.S. Department of Commerce on Canadian lumber imports. Our Canadian sawmills were impacted by these duties, and we curtailed production as necessary during the year. We are hopeful that these trade barriers will be reduced for the benefit of both countries.

Improved Asset Base and Earnings Potential

Over the last five years, we have made several excellent acquisitions and disposed of high-cost or non-core assets. Our asset base is significantly enhanced, and our product mix is vastly improving. The centerpiece of this strategy is the conversion of a large newsprint machine at our Catawba, South Carolina, mill to lightweight coated papers. This conversion, combined with the start-up of two Nuway off-site coating machines over the last two years, will make Bowater one of the largest producers of coated groundwood papers in North America. These initiatives have also removed 350,000 metric tons of newsprint production. When combined with our closure of two paper machines, a total of 550,000 metric tons of newsprint will have been removed from the North American market.

As we enter 2003, I look back on 2002 as a year in which the Bowater management team faced extremely difficult conditions and responded well. Both demand and prices are beginning to recover, our costs are lower and your company is emerging as a leader in the value added, coated papers and specialties sectors.

Priorities

Our priorities in 2003 are the following:

- Reduce debt using the proceeds from non-core asset sales and cash generated from operations.

- Continue the emphasis on cost reduction and discipline in capital spending.

- Complete the buildout of our coated and specialty papers division.

- Enhance our newsprint business through appropriate supply management and asset optimization.

In closing, it is with sadness that I note the recent passing of a valued board member, James L. Pate. His wise counsel and strong dedication will be missed. Richard Barth was scheduled to retire from the board this year after 12 years of service. At the request of the board, he has consented to stand for re-election in May. It is anticipated Mr. Barth will resign upon the board's election of a successor.

To our shareholders, customers and employees world-wide, I want to thank you for your continued support. Although 2002 has required us to manage through an extremely difficult period, I am confident that the actions we have taken and the strategies we are executing will provide significant benefit to all of our stakeholders.

Sincerely,

Edgar Filing: BOWATER INC - Form ARS

Arnold M. Nemirow
Chairman, President and Chief Executive Officer

Bowater 2002 Annual Report 3

Division Overview

Bowater is organized into five divisions: the Newsprint Division, the Coated and Specialty Papers Division, the Pulp Division, the Forest Products Division and the Canadian Forest Products Division. Except for the Pulp Division, each division is responsible for the sales and marketing of distinct product lines and the operation of certain manufacturing sites. The Pulp Division is primarily a marketing and distribution division. Its results are collected, analyzed and reported through the other four divisions.

Newsprint Division

Bowater is the largest manufacturer of newsprint in the United States. The Newsprint Division operates seven manufacturing locations in Canada, the United States and South Korea focused on producing low-cost, high-quality newsprint, pulp and selected uncoated specialty papers. The newsprint and specialty papers are marketed to newspaper publishers and commercial printers throughout the world and are backed by Bowater's reputation for excellent quality and superior service.

Coated and Specialty Papers Division

The Coated and Specialty Papers Division produces coated paper, market pulp and uncoated specialty papers at its Catawba, South Carolina, facility. The division also has two coating facilities in the United States and is responsible for the marketing and sales of a full spectrum of coated and uncoated specialty papers. A recent machine conversion and soon-to-be-completed fiber line modernization at our South Carolina manufacturing facility will provide Bowater with one of the most modern and cost-efficient pulp and paper facilities in the world.

Pulp Division

Bowater remains a leading North American producer of market pulp. The Pulp Division markets and distributes market pulp produced at four of Bowater's integrated manufacturing sites in Canada and the United States. The company produces all major grades of market pulp (northern and southern hardwood and softwood kraft). Our Coosa Pines, Alabama, operation manufactures higher, value-added fluff pulp that is enjoying a growing market.

Forest Products Division

The Forest Products Division manages 1.1 million acres of timberlands owned or leased in the United States and eastern Canada and over 8.3 million acres of Crown-owned land in the province of Ontario. The division operates three softwood sawmills, and a fourth will open in 2003. It supplies wood fiber to those sawmills and five of the company's pulp and paper mills while marketing and selling lumber in North America. All of the land it oversees is certified as sustainably managed under either the American Forest & Paper Association's Sustainable Forestry Initiative (SM) or the international registration program ISO 14001.

Canadian Forest Products Division

The Canadian Forest Products Division operates four paper manufacturing sites in Canada. This division manages 0.4 million acres of owned and leased timberlands and has over 23.4 million acres of cutting rights on Crown-owned land in the Canadian provinces of Quebec and New Brunswick. The division also operates nine sawmills and is responsible for the marketing and sales of its timber and lumber production. Most of the land it manages is certified for sustainable forest management under the international registration program ISO 14001. The remaining lands are in the process of being certified.
